

Latin America and the Caribbean Office

Ref: UN Environment-GEF Project Coastal Landscapes, Chile

12 April 2019

Dear Ms. West:

UNEP's Regional Office for Latin America and the Caribbean is pleased to confirm its support to the GEF project "Mainstreaming biodiversity conservation and sustainable management of coastal wetland's watersheds territories, within Chile's South Center Biodiversity Hotspot, through improved coastal management and planning frameworks" GEF Project ID 9766.

This Project, in the GEF biodiversity and land degradation focal areas to be executed in Chile, is closely aligned with a series of elements in UN Environment's activities in the country during the life-time of the project. While programming with national environment authorities is updated on a regular basis, at this point the most conservative estimate of UN Environment's investment in alignment with the project's objective accrues to 250,000 USD.

Leo Heileman
Regional Director and Representative

Mrs.
Kelly West
Director, GEF Coordination Office
