

Project Implementation Report

(1 July 2022 - 30 June 2023)

Project Title:	Promoting Integrated Biomass and Small Hydro Solutions for Productive Uses in Cameroon		
GEF ID:	4785		
UNIDO ID:	120335		
GEF Replenishment Cycle:	GEF-5		
Country(ies):	Cameroon		
Region:	AFR - Africa		
GEF Focal Area:	Climate Change Mitigation (CCM)		
Integrated Approach Pilot (IAP) Programs ¹ :	N/A		
Stand-alone / Child Project:	Stand-alone		
Implementing Department/Division:	ENE / ESI		
Co-Implementing Agency:	UNIDO		
Executing Agency(ies):	Ministry of Water and Energy (MINEE), Rural Electrification Agency (AER) Ministry of Economy (MINEPAT)		
Project Type:	Full-Sized Project (FSP)		
Project Duration:	48 months		
Extension(s):	3		
GEF Project Financing:	2,000,000 USD		
Agency Fee:	200,000 USD		
Co-financing Amount:	10,000,000 USD		
Date of CEO Endorsement/Approval:	9/8/2014		
UNIDO Approval Date:	8/4/2014		
Actual Implementation Start:	10/8/2014		
Cumulative disbursement as of 30 June 2023:	\$USD 1,994,270.21		
Mid-term Review (MTR) Date:	3/4/2022		
Original Project Completion Date:	12/31/2018		
Project Completion Date as reported in FY22:	9/30/2022		

¹ Only for **GEF-6 projects**, if applicable

Current SAP Completion Date:	9/30/2022
Expected Project Completion Date:	9/30/2022
Expected Terminal Evaluation (TE) Date:	3/30/2023
Expected Financial Closure Date:	9/30/2023
UNIDO Project Manager ² :	LUGMAYR Martin

I. Brief description of project and status overview

Project Objective

The objective of the project is to reduce GHG emissions through promotion of investments and a market in the scale up and replication of integrated renewable energy solutions for productive uses and industrial applications in Cameroon. The project helps in demonstrating renewable energy such as small hydropower as well as the biomass power solutions for rural areas and building confidence of the government officials, private stakeholders and local financing institutions developing projects to optimally utilize the locally available renewable energy resources, and meeting the desired growth objectives through increased rural energy access and increased industrial activities.

The applicable GEF outcome indicators and GEF tracking indicators of the project are:

Project Core Indicators		Expected at Endorsement/Approval stage	
6 Greenhouse Gas Emissions Mitigated (metric tons of CO2e)		163,656 tCO2e emission reduction, as per the CEO endorsed project document.	
11	Number of direct beneficiaries disaggregated by gender as co-benefit of GEF investment		
11	<i>Electricity units (kWh generated from execution of biomass and small hydropower and best practices of electricity uses for rural electrification and productive applications)</i>	2.7 MW of SHP pilot project 0.125 MW of Biomass based power plant installed	

Baseline

Cameroon has an installed power generation capacity of 1,593 MW3 (2011) (of which large hydropower represents 45%), and the rest is thermal (natural gas, heavy oil and diesel), which includes both public sector projects as well as private auto generation projects). The electricity use per capita in Cameroon is 226 kWh⁴, whereby 81.2% comes from hydroelectricity, from 15.4% biomass and the rest from petroleum products (oil, natural gas). Importantly, this situation exists in both rural and urban areas. Out of this, Cameroon primarily relies on approximately 30 ageing diesel power stations as back-up thermal plant facilities, the largest of which are located in Bamenda, Yaoundé,

² Person responsible for report content

³ Report on Energy Situation of Cameroon, 2011, SIE-Cameroon

⁴ Source: African Development Fund report: "Project to Strengthen and Extend the Electricity Transmission and Distribution Network", 2009

Mbalmayo and Ebolowa⁵ and one natural gas run thermal power station, Kribi Power Station, with 216 MW of capacity, installed in the year 2011⁶.

In 2010 the energy generation was only 3.9 TWh (AES SONEL, 2011), the majority of which was consumed by medium and high voltage customers. According to AES SONEL (2011) the transmission network consists of two main systems - the Northern Interconnected Grid (NIG) Network and the Southern Interconnected Grid (SIG) with 480 km of 225 kV, 337 km of 110 kV, 1,067 km of 90 kV, 11,450 km of 5.5 to 33 kV and 11,158 km of 220 to 380 kV lines. There also is an Eastern Isolated Grid (EIG). The electricity supply is unevenly distributed, as these sub-grids are not synchronized. These isolated grids need interconnection, forming a unified national grid because it not only helps in catering to the urban consumers, allowing optimal use of generating capacity and modern management of interconnecting the grid, but it is also important for rural electrification.

Cameroon has substantial quantities of biomass energy resources and a very high potential for small hydro (second largest hydro potential country in the central African region). Potential for solar energy also exists in the region. There are many agro processing activities in Cameroon including palm oil mills, which have the theoretical potential to provide all the electricity needs of the country from energy generation using its biomass residues. At present, such residues are reused in the plantations and the excess residue is burned in the open air, thereby releasing CO2 to the atmosphere, and contributing to GHG emissions. Farmers depend on cutting large quantities of wood (in habitats that should be protected) for drying their cocoa, as well as palm oil production. The smoke from the burning wood reduces the quality of the cocoa. Also, the smoke gets released to the atmosphere, contributing to pollution and GHG emission. Apart from this, the in-efficient burning of wood is causing the increased GHG emission and un-sustainable utilization of forest biomass resources.

Construction of an integrated renewable energy based mini grid at such sites would reduce GHG emissions and land degradation while increasing the productive capacity and quality of the commodities involved. With many such regions existing in the country, it follows that successful demonstration of the technical and financial viability of such renewable energy solutions for productive applications such as palm oil extraction, flour mills, coffee grinding, carpentry, cocoa processing, bakery etc. which are currently using diesel generators for their electricity needs, has a high potential for replication and scaling-up nationwide. At present, the government understands the importance of these renewable energy resources, but no serious efforts have been undertaken for the development of these sectors. This is primarily due to a lack of specific policies and technical capabilities in the country. This project focuses on overcoming both the above-mentioned challenges by demonstrating the viability of SHP and biomass based mini grids in the country.

Please refer to the explanatory note at the end of the document and select corresponding ratings for the current reporting period, i.e. FY23. Please also provide a short justification for the selected ratings for FY23.

In view of the GEF Secretariat's intent to start following the ability of projects to adopt the concept of adaptive management⁷, Agencies are expected to closely monitor changes that occur from year to year and demonstrate that they are not simply implementing plans but modifying them in response to developments and circumstances or understanding. In order to facilitate with this assessment, please introduce the ratings as reported in the previous reporting cycle, i.e. FY22, in the last column.

Overall Ratings ⁸	I Ratings ⁸ FY23	
Global Environmental Objectives (GEOs) / Development Objectives (DOs) Rating	Satisfactory (S)	Satisfactory (S)

⁵ Source : <u>http://www.mbendi.com/indy/powr/af/ca/p0005.htm</u>

⁶ Source : <u>http://en.wikipedia.org/wiki/List_of_power_stations_in_Cameroon</u>

⁷ Adaptive management in the context of an intentional approach to decision-making and adjustments in response to new available information, evidence gathered from monitoring, evaluation or research, and experience acquired from implementation, to ensure that the goals of the activity are being reached efficiently

⁸ Please refer to the explanatory note at the end of the document and assure that the indicated ratings correspond to the narrative of the report

The development objectives for the reporting period, notwithstanding certain implementation delays, remain satisfactory. This consideration comes from the fact that the project has already delivered on most of its development objectives, as evinced from the terminal evaluation.

Implementation Progress (IP) Rating	Moderately Satisfactory (MS)	Satisfactory (S)
--	------------------------------	------------------

Despite UNIDO's best efforts in coordination and monitoring, there have been delays with the completion of two turn-key biogas units. The UNIDO team, both at the HQ and in Cameroon, is closely coordinating to mitigate these delays and complete the remaining work as soon as possible.

Overall Risk Rating	Moderate Risk (M)	Moderate Risk (M)
---------------------	-------------------	-------------------

The risk level remains moderate, mainly in view of the delays of the completion of the turn-key biogas units. At the aftermath of the COVID-19 pandemic, where the global supply chains got disrupted, the subcontractor has been struggling to source all the required pieces of the equipment for the biomass generator unit. To mitigate these risks, UNIDO has been mediating between the turn-key subcontractor and the third-party supplier to fast track the production and shipping of the remaining equipment.

II. Targeted results and progress to-date

Please describe the progress made in achieving the outputs against key performance indicator's targets in the project's **M&E Plan/Log-Frame at the time of CEO Endorsement/Approval**. Please expand the table as needed.

Project KPIs/Indicators	Baseline	Target level	Progress to-date
Component 1 – Strengthening the policy	and regulator	ry framework for renewa	ble energy and its enforcement
Outcome 1: A renewable energy policy and private sector confidence and participation inOutput 1.1: A renewable energyPolicy framework for renewable energy is well accepted among all stakeholders and the increased number of private sector players applying for renewable energy development under that framework.	regulatory fram n renewable er Low capability and capacity of government institutions for formulating appropriate policy and regulatory quidelines for	nework in place, supportin nergy generation 1) Policy and regulatory guidelines developed within 1 year of the project start	Building upon the progress achieved during the previous years, the final draft of bids documents for Small Hydro Power plants have been finalized by the UNIDO Field Office project team. Coordination follow-ups have been made and bidding documents transferred to MINEE for finalization and launching of tenders.

formulation and implementat ion of policy and regulations for promotion of biomass and	building modules for government stakeholders related to policy, regulation and RE project implementation. ii. Component 4: Monitoring and evaluation

Outcome 4: 4.1 Project deliverables are tracked and achieved and 4.2Best practices learnt from this project prepared for future replication and scaling up of projects based on biomass and small hydropower.

	ii. Number of review meetings and steering	Unit Formed and operational within 1 month of the start of the project. M&E plan ready within 3 months of the project	The Project Terminal Evaluation has been conducted and completed in March 2023. The key findings and recommendations have been summarized under Part III, Section 5 below. Besides the ad hoc exchanges with MINEE and the other project stakeholders, no formal project monitoring committee meetings have been held under the reporting period, considering that the project closed operationally by 30 September 2022.
Lessons learned are disseminate		project drafted by the 3.5 years from project	Lessons learnt from the project, based on the findings and recommendations of the project terminal evaluation have been shared with the project monitoring committee, (as summarized under Part III, Section 5 below).

III. Project Risk Management

1. Please indicate the <u>overall project-level risks and the related risk management measures</u>: (i) as identified in the CEO Endorsement document, and (ii) progress to-date. Please expand the table as needed.

	(i) Risks	(i) Risk level (FY 22)	(i) Risk level (FY 23)	(i) Mitigation measures	(ii) Progress to-date	New defined risk ⁹
1	Institutional Risks In the absence of institutional capacity for renewable energy planning the replication expected from this project may not be achieved	Moderate risk (M)	Moderate risk (M)	involving		
2	Technology Risks No demonstrated project in the	Low risk (L)	Low risk (L)	SHP and Biomass based mini-grids for rural electrification have been demonstrated successfully in many	At least three mini grid developers, designers and manufacturers of SHP equipment have been identified nationally during the project lifespan. One of the manufacturers is an owner of a modern workshop in the city of Douala and confirms capability of building 10 Pelton turbines within a year.	

⁹ New risk added in reporting period. Check only if applicable.

	country for distributed generation using RE based minigrids.			developing countries. Technology know-how and Technology know-how and experience from these installations will be used while designing and implementing the project		
3	Implementation Risk There is a delay in implementation of the project impacting the project success	Low risk (L)	Low risk (L)	"UNIDO has long-standing direct experience in the development and implementation of SHP and		
4	Economic and Financial Risks SHP and biomass based mini-grid may not become economically viable in rural areas	Moderate risk (M)	Moderate risk (M)	Focus will be on use of the renewable energy for productive purposes where the energy generated is used to create value/service for the communities so that they can	project realization and are willing to contribute in their own way for the sites to be set up. Villagers have always cooperated with consultants and project team visiting the sites and wish for the	

				use the income generated to	in the project implementation. During the development of the	
5	Financial/credit	Low risk	Medium	pay for the electricity received. During the preparatory studies it has been identified that there are existing as well as new potential productive applications such as palm oil extractor, coffee grinder, flour mill, bakery units, saw mill etc. which can use the electricity from the proposed plants. from the proposed plants. Though the preliminary socioeconomic survey indicates about willingness and paying capacity of villagers for electricity services, proper mechanism for revenue collection will be developed while designing and implementing the project. The renewable energy	for sites to be set up. Villagers have always cooperated with consultants and project team visiting the sites and wish for the project to be put in place soon. Also local authorities are very cooperative and are willing to assist UNIDO in the project implementation. The local population is willing to pay electricity consumed and be involved in the management of the biomass plants. Most of the farmers and palm oil extractors are ready to provide biomass residues. A turnkey solutions provider was recruited to install the biomass to energy system. The construction and installations are ongoing. The call for tender for the distribution grids has been drafted by the MINEE, approved by the commission of call for tenders within the Ministry and will be launched in the coming weeks.	
5	Financial/credit constraints and high capital costs that prevent the private sector from investing in renewable energy projects.	Low risk (L)	Medium risk (M)	project focuses on productive uses where there are real economic	trainings about the benefits of investing in RE. This pilot project will bring a real motivation for the private sector in order to ensure its replication. The development of full-fledged feasibility studies, incl. the financial and economic analysis and the risk appraisal, showcase the viability of investments in SHP.	
6	Market/Financing Risks Lack of	Low risk (L)	Low risk (L)	"The project involves working with the government and financial institutions in the	1) Sensitization and promotion of investment in RE have been done through workshops with the involvement of private sector and financial institutions.	
	post project market			early stages to help promote the	2) The Rural Electrification Agency (AER) continues to promote investment in RE by following the results of investigations on	

environment to	development of the enabling SHP and biomass sites. Under the UNIDO-GEF project, AER
attract growth in	policy and regulatory envisages to accelerate the expansion of SHP projects. New
renewable	framework policies have been adopted by AER such as financing of

	selected
	demonstration project, the
	technical feasibility and
	demand assessment for
	such
	kind of projects have also
	been
	carried out in the region as
	well
	as overall country and it is
	observed that once
	successfully
	demonstrated, this type of
	project can be replicated
	with
	appropriate policies and
	financing structures. Project
	preparation team took care
	of
	these things and had
	discussions with the ministry
	and CREF officials to
	identify
	what kind of capacity
	development needed for
	them
	to develop conducive
	policies to develop
	conducive policies
	and financing mechanisms
	for
	creating large market of RE.
	Project proposes to
	establish a
	special window under CREF
	with the help of government
	and
	partners to accelerate the
	RE
	expansion. That would
	strengthen CREF working
	for
	electrification in general with
	one additional specialised
	window to support RE
	sector in
	the country. This will help to
	ensure funds available or
	benefit
	and funding beyond the
	GEF
	funded project. Also, the
	project
	will help to build expertise of
	project developers in
	designing
	and structuring bankable
	renewable energy projects
	that
	together with the impact of
	the
	policy and regulatory
	framework

				should help to ensure a good degree of post GEF project replication and scale up of renewable energy generation investments."		
7	Regulatory Risk Regulatory framework to promote renewable energy based mini-grid for rural electrification has not been enacted	Moderate risk (M)	Moderate risk (M)	central role in this project and hence the chances of the proposed policy and regulatory	has a department of RE, which directly handles all RE related aspects. The Rural electrification Master Plan is ongoing. Meanwhile there is a law of RE that was adopted since 2011 which includes elements regarding FiT and PPA. The government is committed to increase up to 25%, RE in the energy mix by 2035. The share is currently 11% for SHP and 7% for biomass. Moreover, the General code of Decentralized Territories, which gave the possibility for the local Councils to generate their own electricity without referring to ENEO (i.e. the national electricity utility), has been promulgated since December 2019.	
8	Sustainability Risks Failure to achieve project outcomes and objective after successful delivery of outputs	Low risk (L)	Low risk (L)	Establishing a monitoring, tracking and benchmarking program, the project would	During the site visit in January 2020, the project team realized that a Power Plant with household's connection constructed and installed by HUAWEI in Ekom Nkam Village. This plant will be managed by AER. While officially informed by UNIDO that the project will continue its activities, MINEE did not give any objection for the installation of a biomass plant in the same village. However, the installation of 2 plants in a small village can induce competition between the two plants. An analysis was made and the project site relocated to Essekou, which is much more dynamic and feasible.	
9	Climate Change risk Climate change could change	Moderate risk (M)	Moderate risk (M)	"Keeping in mind that this adverse situation might arise, the project is designed and developed with more safety and	impacts. 1. On SHP	
	Cameroon's hydrological systems sufficiently so as to render SHP projects economically				The hydrological and hydraulic studies have taken into account the climate and hydrology of the site during the last 30 years. 				much being affected, and hence the impact on vegetation too is expected to be minimal. In case draught situation arises, then the plant may look for an option the plant may look for an option of integrating it with other minigrids running on biomass based plant. Globally smart technologies are available to do necessary integration of different mini-grids.		
10	Social risk The SHP project can affect the other water uses downstream such as irrigation and may also face competition with water uses by large hydro up-stream	Low risk (L)	Low risk (L)	be	http://repcameroon.blogspot.com/p/videos.htm	

2. If the project received a <u>sub-optimal risk rating (H, S)</u> in the previous reporting period, please state the <u>actions taken</u> since then to mitigate the relevant risks and improve the related risk rating. Please also elaborate on reasons that may have impeded any of the sub-optimal risk ratings from improving in the current reporting cycle; please indicate actions planned for the next reporting cycle to remediate this.

NA

^{3.} Please indicate any implication of the COVID-19 pandemic on the progress of the project.

Despite the COVID-19 constraints, SOMCO SARL, (a Cameroonian turkey solution provider) has been progressing well with the construction of the civil works, the completion of boreholes and the installation of equipment. Notwithstanding, certain bottlenecks with the global supply chains have created considerable delays with the provision of biomass and biogasifier equipment from abroad to the Foyemtcha and Essekou sites. Especially a 25 kW biomass generator, which is currently being shipped from the supplier All Power Labs from USA to SOMCO SARL in Cameroon, has proven to be challenging. At the aftermath of the COVID-19 pandemic, where the global supply chains got disrupted, All Power Labs struggled to source all the required pieces of the equipment for the biomass generator unit. UNIDO have been closely following up on this matter, mediating to expedite the process. The biomass generator unit is scheduled to be shipped, installed and commissioned within July-August 2023.

UNIDO and the project partners have been following closely with the suppliers to expedite and complete the delivery and installation processes the soonest.

4. Please clarify if the project is facing delays and is expected to request an extension.

		Λ	
1.1	Ζ.	н	

5. Please provide the **main findings and recommendations of completed MTR** and elaborate on any actions taken towards the recommendations included in the report.

Following the mid-term evaluation of the project, its main recommendations are summarized below: Reinforce partnership for training with Academia by means of protocols and co-funding. Develop a specific roadmap for the implementation of on-grid projects; Clearly separate the elaboration of engineering studies for technical and economic feasibility from the environmental and social studies for impact assessment; Promote transparent and openly shared information about the most interesting sites for • development of small hydropower facilities, in the shape of a web-based portal; Launch (or assist the MINEE in launching) an international open tender to identify interested parties • to develop hydropower project such as BOT projects; Promote coordination of efforts by Development Funding Agencies and International Funding • Institutions in the renewable power sector in Cameroon to avoid conflicts and foster synergetic action; Develop specific fast-track mini-grid project activities around existing biomass plants own/operated • by private entities for their self-consumption; Use a general work plan/schedule for the remaining time of the project, detailing the activities for each component, showing the responsible party, milestones and deliverables; • Include tendering in project objectives, to guarantee that the study phase leads to an effective completion of a sufficient set of documents and instruction and completion of specific tenders. Following the recommendations of the MTR, a work plan for the rest of the activities has been drafted, component by component, with milestones and deliverables. Relevant discussions have been held with NGOs, academia and the Ministry of Energy to contracting third parties to follow up on the rest of the project activities after the closure of this project.

IV. Environmental and Social Safeguards (ESS)

1. As part of the requirements for **projects from GEF-6 onwards**, and based on the screening as per the UNIDO Environmental and Social Safeguards Policies and Procedures (ESSPP), which category is the project?

Category A project

Category B project

Category C project

(By selecting Category C, I confirm that the E&S risks of the project have not escalated to Category A or B).

Notes on new risks:

- If new risks have been identified during implementation due to changes in, i.e. project design or context, these should also be listed in (ii) below.
- If these new/additional risks are related to Operational Safeguards # 2, 3, 5, 6, or 8, please consult with UNIDO GEF Coordination to discuss next steps.
- Please refer to the UNIDO <u>Environmental and Social Safeguards Policies and Procedures</u> (ESSPP) on how to report on E&S issues.

Please expand the table as needed.

	E&S risk	Mitigation measures undertaken during the reporting period	Monitoring methods and procedures used in the reporting period
(i) Risks identified in ESMP at time of CEO Endorsement			
(ii) New risks identified during project implementation (if not applicable, please insert 'NA' in each box)			

V. Stakeholder Engagement

1. Using the previous reporting period as a basis, please provide information on **progress, challenges and outcomes** regarding engagement of stakeholders in the project (based on the Stakeholder Engagement Plan or equivalent document submitted at CEO Endorsement/Approval).

The Cameroonian Government has been consulted regularly, mainly through the project focal point within the MINEE, and other local authorities (Municipal Council Mayors). Regular meetings have been held on project progress to review the outcomes and to take action on resolving the challenges. All the others stakeholders concerned (AER, MINEPAT, MINEPDED, Village Chiefs etc.) have collaborated for the smooth execution of the project. The MoU signed in April 2016 with MINEE will remain in force until the project end.

Challenges

The pledged co-financing from the Cameroonian Government to the project has failed to materialize.

MINEE has also fallen behind in validating the tender documents for the electricity distribution grids. The department in charge of validating this tender documentation only cleared it in June 2022.

The grid distribution extension to the biomass and biogas sites in Foyemtcha and Essekou is yet to be finished. MINEE has pledged to complete the grid as soon as possible, and has announced the official procurement tender at the beginning of 2023. However, the completion of the works may incur delays.

Outcome

The tender documents for the distribution grids have been validated by the dedicated team within MINEE.

2. Please provide any feedback submitted by national counterparts, GEF OFP, co-financiers, and other partners/stakeholders of the project (e.g. private sector, CSOs, NGOs, etc.).

- AER and MINEE suggested as SHP reach maturity (feasibility studies completed, financial and economic analysis show the feasibility of the power plants, and business model ensure its sustainability), a call for tenders can be launched by the government of Cameroon to recruit an IPP.
- MINEE has received the bids documents from ARSEL to launch the call for tenders for the 2 SHP sites.
- The Small Hydro Power Centre installed by UNIDO in the National Advanced School Engineering Yaoundé, has been confirmed as full Laboratory within the School, thus enabling PhD and Masters students to undertake relevant research.

3. Please provide any relevant stakeholder consultation documents.

- 4785_2023_Lettre MINEE_Prise_en_charge_financière_des_mini_centrales
- 4785_2023_Work plan

VI. Gender Mainstreaming

1. Using the previous reporting period as a basis, please report on the **progress** achieved **on implementing gender-responsive measures** and **using gender-sensitive indicators**, as documented at CEO Endorsement/Approval (in the project results framework, gender action plan or equivalent),.

All activities have been conducted with representation of both males and females. Despite our best efforts, male participants always had the larger majority in many situations. However, at least two women are members of the Local Follow Up Committee on the biomass and biogas project sites.

VII. Knowledge Management

1. Using the previous reporting period as a basis, please elaborate on any **knowledge management activities** / products, as documented at CEO Endorsement / Approval.

A website (<u>http://repcameroon.blogspot.com/</u>) was created and all information related to the project are regularly updated there.

A toolkit on steps to invest in SHP in Cameroon has been developed during the preparation of the SHP feasibility studies and the document has been shared with relevant stakeholder, including MINEE, AER and private developers.

A factsheet has been elaborated, and the document shared with relevant stakeholders in various meetings and fora.

2. Please list any relevant knowledge management mechanisms / tools that the project has generated.

- The SHP center in National Advanced School of Yaoundé was confirmed as a full laboratory. Now the center can deliver Masters and PhD programmes under the coordination of the School and University of Yaoundé I. The center can also conduct training for professionals.
- A website (<u>http://repcameroon.blogspot.com/</u>) was created and all information related to the project is regularly updated there.

All attachments are to be named as per the GEF required format, i.e.: "GEF4785_Promoting Integrated Biomass and Small Hydro Solutions for Productive Uses in Cameroon"_Docx type.

VIII. Implementation progress

1. Using the previous reporting period as a basis, please provide information on **progress**, **challenges and outcomes achieved/observed** with regards to project implementation.

Progress

- Activities have been progressing despite the challenges caused by the restrained project budget.
- The TE has been completed, and its recommendations have been shared with the various stakeholders.
- SOMCO SARL, the turnkey solutions provider has been working on the construction and installation of the biomass power plants in Foyemtcha and Essekou. The works have been almost completed.
- The distribution grid call for tender document was approved by the dedicated team within MINEE and the procurement process has been launched.
- The project Terminal Evaluation has been completed, with the following recommendations:

Recommendations to UNIDO:

- It is recommended that UNIDO through its UNIDO Representative in Cameroon continue to actively take part beyond the project end in the IPP Procurement Committee established by MINEE, by providing guidance and technical insight on the selection of IPPs, development of O&M and governance arrangements, and construction and installation of the two planned SHP plants in Bafang and Manjo. Since project funding has already finished, considering the critical importance of this support for sustainability of project activities as well as in the interest of longterm development of renewable energy mechanisms in Cameroon, other resources such as UNIDO core funding, etc. may be used for this purpose.
- Furthermore, to build on the project's key outcomes achieved so far, including the developed technical capacity and bid-ready SHP sites, etc., it is recommended that UNIDO facilitate further development and financial linkages for the Government of Cameroon with donors. In this regard, partnership with international financial institutions is likely to be most beneficial based on a results-based lending approach.
- In order to widely disseminate the knowledge products and lessons learned under the project, it is recommended that UNIDO make the DPRs for the two SHP and two biomass sites, along with training modules on SHP design, EIAs, and GIS mapping of SHP sites available to other relevant government ministries in addition to MINEE.
- When designing future projects, to ensure country-level ownership, it is critical to get formal letters of commitment from relevant ministries/institutions for co-financing and other cooperation. Also, a mix of co-financing modalities should be sought from national and local stakeholders, rather than reliance on only in-cash co-financing. In addition, there is a need for a mechanism to measure and formally track in-kind co-financing received from partners such

as land from local communities for the construction of plants and for construction of roads for transport of machinery for the construction of plants, etc. Similarly, it is critical to engage key development stakeholders, especially when planned project outcomes, such as the REF window, are contingent upon cooperation from these organizations, such as the World Bank's ownership of the REF.

Recommendations to MINEE:

- To encourage private sector investment in the RE sector, it is imperative that the Government of Cameroon focuses on providing an enabling environment through the endorsement of conducive policies and frameworks.
- It is also recommended that assistance is sought from international financial institutions with considerable experience in support to private-led RE development in Africa, such as BADEA, the World Bank, and AfDB, etc., in order to encourage private sector investment in the RE sector.
- At the activity-level, to ensure sustainability, it is recommended that management plans for the future biomass sites incorporate a mix of Operation and Maintenance (O&M) training for technical experts at MINEE and AER with the monitoring support from the communities and municipalities members. This can also result in assigning a dedicated manager for the installed SHP and biomass plants.
- In the interest of replication and upscaling, it is recommended that MINEE make the DPRs for the two SHP and any other similar knowledge products publicly available for the benefit of concerned stakeholders, , such as potential IPPs, financial institutions, and academia, etc.,

Following the recommendations of the TE relevant discussions have been held with MINEE, NGOs, academia and contracting third parties to follow the rest of the project activities after the closure of this project.

Challenges

- The Government of Cameroon has not managed to contribute with the co-financing that was pledged for the project. As a consequence, the available project budget could not fully cover all the planned activities, as per the project document. UNIDO, in close coordination with the Project Monitoring Committee and the local project stakeholders, have had to focus on certain activities that should provide the biggest impact for the given budget.
- Serious difficulties with finding a turn-key service provider (no initial offers could obtained through an open UNIDO tender) resulted in a delay in the implementation of biomass power plant construction and installation activities, which only started in April 2022, instead of December 2021 as planned.
- With the rainy season having already started, the roads are very bad in the villages of Essekou and Foyemtcha, making their access difficult. Due to the post COVID-19 disruptions to global supply chains, the delivery of biomass and biogasifier equipment from international suppliers has been considerably delayed. Coupled to this, there have been international payment restrictions and checks from the Central Bank of Cameroon towards foreign suppliers. Such restrictions have in turn seriously impacted the project schedule.
- The lack of a site engineer makes it difficult to monitor the progress of plant construction. To mitigate this risk, the project management team has been coordinating with SOMCO SARL through biweekly meetings to monitor the progress of the project execution on the ground.

Outcome

- The Government of Cameroon is preparing to launch the calls for tender for small hydropower sites (*appel d'offres*), as a letter was already transmitted by MINEE to ARSEL for this purpose.
- Development of DPR will help Electricity Regulatory Agency and Ministry of Energy on minimal

technical specifications for SHP call for tender within the country.

- UNIDO has contributed to add about 8 MW within the Cameroonian electricity mix.
- Best practices will be got from the two bioenergy units and lessons learnt.
- The project Terminal Review has been conducted and delivered. The Terminal Review Report will serve in research and dissemination of lessons learnt.
- The construction of the two biomass units in Essekou and Foyemtcha is ongoing by SOMCO SARL.
- Tender documents for the distribution grids related to the biomass power plants have been validated by the dedicated team within the MINEE.
- The Small Hydro Power Centre installed by UNIDO in the National Advanced School Engineering Yaoundé, has been confirmed as a full Laboratory within the School and relevant research is performed by PhD and Masters students.

2. Please briefly elaborate on any **minor amendments**¹⁰ to the approved project that may have been introduced during the implementation period or indicate as not applicable (NA).

Please tick each category for which a change has occurred and provide a description of the change in the related textbox. You may attach supporting documentation, as appropriate.

IX. Work Plan and Budget

1. Please provide **an updated project work plan and budget** for <u>the remaining duration of the project</u>, as per last approved project extension. Please expand/modify the table as needed.

Please fill in the below table or make a reference to a file, in case it is submitted as an annex to the report.¹¹

Outputs by Project Component	Year 2023			GEF Grant Budget Available (US\$)	
	Q1	Q2	Q3	10,506.79	
Component 1 – Strengthening the policy and regulatory framework for renewable energy and its en	nford	eme	nt.		
Outcome 1: A renewable energy policy and regulatory framework in place, supporting a vibrant renewable enhanced private sector confidence and participation in renewable energy generation.	ene	rgy se	ector	with	
Output 1.1: Renewable energy policy and regulatory framework enforced	\boxtimes	\bowtie	\bowtie		
Output 1.2: Institutional capacity developed for the formulation and implementation of policy and regulations for promotion of biomass and small hydro projects for rural electrification and productive applications through private sector participation.				728.89	
Component 2 – Developing mechanisms to promote and sustain private sector investments in rene generation.	ewab	ole er	nergy	,	
Outcome 2.1: Enhanced public - private partnerships investments and stakeholders' acceptance of viabilit projects	y of S	SHP I	based	l mini-grid	
2.2: National institutions and key private sector market players have the financial and technical capacities, needed to effectively promote and sustain a renewable energy market are developed.	tool	s and	supp	oort base	
Output 2.1: Guidelines, best practices, investment incentives, standardized PPAs, tariffs, pricing mechanisms, risk management instruments and viable renewable energy generation business models developed and put in place					
Output 2.2: Training programmes implemented to strengthen the capacity of local banks and institutions in project finance and risk management instruments for renewable energy projects					
Output 2.3: Renewable energy investment fora held to sensitize investors and promote investor confidence				8,141.13	
Output 2.4: Targeted technical capacity developed for the design, operation and maintenance of integrated renewable energy systems	\bowtie				
Output 2.5: An investment guide/toolkit on renewable energy investment potential in Cameroon published to support investors and project developers.	\boxtimes	\boxtimes	\boxtimes		
Output 2.6: Special window for renewable energy under CREF established and operational	\boxtimes	\boxtimes	\boxtimes		
Component 3 – Demonstration of the technical and commercial viability of integrated renewable er	nergy	y min	i grio	ls.	
Outcome 3.1: Renewable energy mini grids are replicated and become an integral part of Cameroon's ele 3.2: Installed capacity of renewable energy systems increased.	ctrific	ation	prog	ram	
Output 3.1: Four integrated electricity mini grids of a combined capacity of up to 2.825 MW and optimizing local renewable energy resources installed and operated to demonstrate the technical and commercial viability of renewable energy systems.	\boxtimes			1,169.13	
Output 3.2: Existing and new productive uses identified and value chains promoted for renewable energy utilization.					
Component 4 – Project Management and M&E					
Outcome 4.1: Project deliverables are tracked and achieved				467.64	

¹¹ Besides this table, please also refer to the annexed work plan for the reporting period.

Output 4.1: Demonstration projects monitored throughout project cycle and	\boxtimes	\boxtimes	\boxtimes
Outcome 4.2: Project deliverables are tracked and achieved			
Output 4.2: Lessons learned are disseminated nationwide to relevant stakeholders to benefit further			

X. Synergies

1. Synergies achieved:

Several discussions have been held with other projects, such as the HYPOSO Project, funded by the European Union and the Plan VER program (Decentralized production of Electricity and Valorisation of Rural Electrification for Agriculture and Rural Development in Cameroon), and the Climate Finance Unit of the World Bank, Central Africa Office with the aim of sharing the projects' insights and knowledge. Furthermore, UNIDO has also collaborated with the alliance for Rural Electrification (ARE) under the CORE initiative, engaging with the private sector and increasing awareness on the productive uses of renewable energy in Cameroon. There are expectations to strengthen the ongoing collaboration with CORE in the future.

3. Stories to be shared (Optional)

NA

GEO LOCATION INFORMATION

The Location Name, Latitude and Longitude are required fields insofar as an Agency chooses to enter a project location under the set format. The Geo Name ID is required in instances where the location is not exact, such as in the case of a city, as opposed to the exact site of a physical infrastructure. The Location & Activity Description fields are optional. Project longitude and latitude must follow the Decimal Degrees WGS84 format and Agencies are encouraged to use at least four decimal points for greater accuracy. Users may add as many locations as appropriate. Web mapping applications such as <u>OpenStreetMap</u> or <u>GeoNames</u> use this format. Consider using a conversion tool as needed, such as: <u>https://coordinates-converter.com</u> Please see the Geocoding User Guide by clicking <u>here</u>

Location Name	Latitude	Longitude	Geo Name ID	Location and Activity Description
Foyemtcha Chefferie	5.194333 N	10.102250 E		Biogas from palm oil residues, palm oil and palm kernel oil production
Essekou Centre	5.210417 N	9.913139 E		Electricity from palm kernel shell gasification, palm kernel oil production

Please provide any further geo-referenced information and map where the project interventions is taking place as appropriate.
