

# **Project Implementation Report**

(1 July 2021 – 30 June 2022)

Project Title:	"Environmentally sound management and disposal of polychlorinated biphenyl (PCB) - containing equipment and DDT wastes and upgrade of technical expertise in Guatemala"
GEF ID:	5816
UNIDO ID:	140298
GEF Replenishment Cycle:	GEF-5
Country(ies):	Guatemala
Region:	LAC – Latin America and Caribbean
GEF Focal Area:	Persistent Organic Pollutants (POPs)
Integrated Approach Pilot (IAP) Programs <sup>1</sup> :	//
Stand-alone / Child Project:	//
Implementing Department/Division:	ENV/IPM
Co-Implementing Agency:	NA
Executing Agency(ies):	Ministry of Environment and Natural Resources, Fundación Defensores de la Naturaleza (FDN)
Project Type:	Medium-Sized Project (MSP)
Project Duration:	69 months
Extension(s):	2
GEF Project Financing:	USD 2,000,000
Agency Fee:	USD 190,000
Co-financing Amount:	USD 13,771,100
Date of CEO Endorsement/Approval:	10-07-2015
UNIDO Approval Date:	11-18-2015
Actual Implementation Start:	01-01-2016
Cumulative disbursement as of 30 June 2022:	USD 1,672,889
Mid-term Review (MTR) Date:	Click or tap to enter a date.
	N/A
Original Project Completion Date:	10/7/2018  Insert the indicated project completion date as per CEO Approval / Endorsement document.

<sup>&</sup>lt;sup>1</sup> Only for **GEF-6 projects**, if applicable

1

	3/31/2022	
Project Completion Date as reported in FY21:	Insert the project completion date as reported in the previous PIR for Fiscal Year 2021 (FY21)	
Current SAP Completion Date:	12/31/2022	
Current SAF Completion Date.	Insert the project completion date as currently seen in the system	
	12/31/2022	
Expected Project Completion Date:	If the date is the same as above, please confirm; if you plan to extend the project completion date, please indicate here and elaborate further under section III.2	
Expected Terminal Evaluation (TE) Date:	11/30/2022	
Expected reminal Evaluation (12) Date.	Insert expected/actual date of TE submission to the GEF	
Expected Financial Closure Date:	12/31/2023	
Expected i manciai ciosure bate.	Insert a date no later than 12 months after the TE submission date	
UNIDO Project Manager <sup>2</sup> :	Alfredo Cueva	

## I. Brief description of project and status overview

### **Project Objective**

The overall objective of this Medium-Sized Project (MSP) is to strengthen national capacities for the environmentally sound management (ESM) of PCBs, including the disposal of 15 metric tons of DDT and up to 400 metric tons of PCBs and related wastes. The project also seeks to support the reduction/elimination of PCB releases from serviced electrical equipment at workshops and interims torage locations, to avoid cross-contamination of electrical equipment and to protect human health and the environment.

Pro	ject Core Indicators	Expected at Endorsement/Approval stage	
9	Reduction, disposal/destruction, phase out, elimination and avoidance of chemicals of global concern and their waste in the environment and in processes, materials and products (thousand metric tons of toxic chemicals reduced)	400 metric tons of PCBs-containing equipment 15 metric tons of DDT	

#### Baseline

Guatemala's electricity sector includes three main subsectors: generation, transport and distribution. Electricity generation essentially relies on renewable sources (65.6%), with a third of generation from non-renewable sources (34.4%). The electricity sector includes hydroelectric, geothermic, biomass, solar and wind energy plants. According to official data, in 2013 Guatemala had a total installed energy capacity of 1,982 megawatts. The National Electrification Institute (INDE) is an autonomous and self-financing state entity, which was created in 1959. It is divided into three companies; one aims at generating electricity through hydro and thermal power, the second aims at transporting electricity continuously in the National Interconnected System (NIS) and the third seeks to foster and promote the commercialization of power, energy and relevant services. In total there are more than 72,000km of distribution network, with EEGSA and ENERGUATE serving 93.3% of users. EEGSA serves 1,177,726 users in the departments of Guatemala, Sacatepéquez and Escuintla, while ENERGUATE serves 1,435,747 users across East and West Guatemala. Sixteen Municipal Electricity Companies (EEM) serve 125, 908 users, and two private enterprises; Services of Southern Tiquisate and Hydroelectric Patulul serve 719 and 699 users, respectively.

Please refer to the explanatory note at the end of the document and select corresponding ratings for the current reporting period, i.e. FY22. Please also provide a short justification for the selected ratings for FY22.

<sup>&</sup>lt;sup>2</sup> Person responsible for report content

In view of the GEF Secretariat's intent to start following the ability of projects to adopt the concept of adaptive management<sup>3</sup>, Agencies are expected to closely monitor changes that occur from year to year and demonstrate that they are not simply implementing plans but modifying them in response to developments and circumstances or understanding. In order to facilitate with this assessment, please introduce the ratings as reported in the previous reporting cycle, i.e. FY21, in the last column.

Overall Ratings <sup>4</sup>	FY22	FY21			
Global Environmental Objectives (GEOs) / Development Objectives (DOs) Rating	Satisfactory (S)	Satisfactory (S)			
Local technical capacities have been <b>strengthened</b> . This has helped to facilitate appropriate management of PCBs, starting with the treatment of dielectric oils with PCBs and pesticides (DDT). This treatment reduces releases to the environment and protects human health.					
Implementation Progress (IP) Rating	Satisfactory (S)	Satisfactory (S)			
Despite the difficulties encountered throughout 2021 related to the COVID-19 pandemic, the activities planned in the project were executed and the indicators and objectives established for each activity were successfully met. Considering the advances made during 2022, implementation progress can be rated as satisfactory.					
Overall Risk Rating Low Risk (L) Low Risk (L)					
In view of the progress and completion of the activities of the entire plan during 2022, the level of risk can be rated as low.					

## II. Targeted results and progress to-date

Please describe the progress made in achieving the outputs against key performance indicator's targets in the project's **M&E Plan/Log-Frame at the time of CEO Endorsement/Approval**. Please expand the table as needed.

Please fill in the below table or make a reference to any supporting documents that may be submitted as annexes to this report.

Project Strategy	KPIs/Indicators	Baseline	Target level	Progress in FY22

<sup>3</sup> Adaptive management in the context of an intentional approach to decision-making and adjustments in response to new available information, evidence gathered from monitoring, evaluation or research, and experience acquired from implementation, to ensure that the goals of the activity are being reached efficiently

<sup>&</sup>lt;sup>4</sup> Please refer to the explanatory note at the end of the document and assure that the indicated ratings correspond to the narrative of the report

Component 1 Legal, regulatory and institutional capacity for the ESM (environmentally sound management) of PCBs within the strengthened and appropriate framework of POPs Guatemala						
Outcome 1: Strengthened national regulatory and institutional capacities for PCBs within the strengthened framework of POPs ESM						
Output 1.1: Legal instruments and technical tools are designed and available to regulate and control ESM of PCBs, including transboundary movement.	Number of environment policies, strategies, laws, regulation approved/enacted	Lack of legal instruments and technical tools	At least one legal instrument and technical tool drafted in line with SC and country requirements	The activities of the plan have been completed, reaching and fulfilling the indicators. This has been communicated in previous reports.		
Output 1.2: Guidelinesfor ESM of PCBs are developed for governmental bodies and other national organizations	Number of ESM guidelines for PCBs	Lack of ESM guidelinesfor PCBs	At least one ESM guideline for PCBs drafted	The output has been completed and information delivered in previous reports		
Output 1.3: Relevant stakeholders are trained and able to use/apply the norms, policies and regulatory framework for ESM of PCBs	Number of training participants/trainees (male/female)	Lack of knowledge on PCB-related legislation and lack of practical knowledge for ESM	At least 4 targeted trainings At least 100 stakeholders trained (70 male/ 30 female)	The number of trainings has been achieved and information delivered in previous reports.		
Output 1.4: Civil society (especially gender groups) are aware of the proposed legal / regulatory framework and able to participate on its discussion, with due consideration of gender and other key issues.	Number of awareness raising activities  Number of participants (male/female) from civil society, especially women, workers and community people Number of gender- specific trainings	Lack of knowledge about the human health and environmental risks associate with improper handling of PCBs	At least 3 targeted awareness raising activities At least 1 gender- sensitive awareness raising activity	The number of awareness raising workshops has been achieved and information has been delivered in previous reports.		
DDT				ical equipment and waste, and disposal of		
Outcome 2: ESM of PCBsat	private and public utilit	ies established and disp	osal of PCBs and DDT	achieved		
Output 2.1: National reference laboratory for PCBs and DDT established and inventory data validated and geo-referenced.	Number of accredited national reference laboratories Number of pieces of equipment sampled.	Analytical capacity by far insufficient. MENR has an inventory focused only on transformers out of service.	reference laboratory installed with the adequate capacity. At least 6,000	Training in chromatography maintenance to 5 technicians of the accredited Laboratory was held in Jan 2022. Completing the trainings planned for this output.		
Output 2.2: ESM system for PCBs established at each process step (identification, handling, collection, transport, safe interim storage and phase-out). BAT/BEP guidance for managing PCB wastesby hazardous waste operators available	ESM for PCB established and operative Number of people trained (male/female)	Lack of ESM for PCB	The ESM system for PCBs and DDT is available	Being a demonstrative project, it showed how to implement a local ESM system of PCB.  All workshops have been completed reaching the goal of the output, as communicated in previous reports.		
Output 2.3: Up to 400 tons of PCB wastes and PCB-containing equipment and 15 tons of DDT are decontaminated or disposed of based on decision	Quantity of PCBs and DDT (tons) eliminated/ discontinued	Attempts to previous exports of PCBs and DDT were unsuccessful	Up to 400 tons of PCB disposed 15 tons of DDT disposed	The activities that are currently being developed are: The local decontamination of 109 m3 of oil; exporting only carcasses and oil with a concentration over 2000 ppm, and pesticides (DDT).		

resulting from the sound analysis of disposal strategies, including cost- benefit analyses				The preliminary amounts to be accounted are:  Equip. w/PCB ready to export 225 tons Treated oil equivalent 109 tons Equipment decontaminated 22.43 tons TOTAL treated 356.43 TONS  DDT 17.10 tons Waste of the process 2.21 tons TOTAL 19.32 TONS
Output 2.4: A list of potentially contaminated sites, with PCBs or DDT, is prepared.	Number of sites investigated/ Number of contaminated sites identified	No precise data available	At least one ESM guideline for PCBs drafted	This output has been completed by creating a technical guideline for the identification of contaminated sites. Information about the results has been provided in previous reports.
Component 3 – Knowledge	management and aw	arenessraising		
Outcome 3: Information and and DDT, relevant organizati				able.Owners of PCB
Output 3.1: Staff of MENR and relevant state organizations trained on all specific aspects of BAT/BEP for ESM of PCBs and wastes	Number of training courses  Number of participants/ course.	Lack of experience / expertise	At least 10 relevant staff trained (7 male/3 female)	Trainings and number of participants set as goals have been reached, nevertheless, a new workshop has been held in December 2021 for training 21 participants. (2 women/19 men)
Output 3.2: Hazardous waste treatment operators are trained in depth on BAT/BEP for the ESM and disposal of PCB/DDT wastes.	Number of training courses  Number of participants/ course.	Lack of experience / expertise	At least 10 relevant operators trained	Targeted number of trainings and participants has been reached, information has been provided in previous reports.
Output 3.3: Transporters of PCBs wastes are trained on BEP issues applicable to their activity.	Number of training courses  Number of participants / course.	Lack of experience / expertise	At least 5 relevant transporters trained	Targeted number of trainings and participants has been reached, information has been provided in previous reports.
Output 3.4 Members of pertinent professional, agricultural, industrial or other organizations, the electrical sector, NGOs and citizen groups participate in awareness workshops on ESM of PCB and DDT	Number of training courses  Number of participants / course.	Lack of knowledge / lack of awareness	At least 50 relevant members trained	Targeted number of trainings and participants has been reached. Nevertheless another workshop was held in August 2021 for training 94 persons (64 women/ 30 men)

# III. Project Risk Management

**1.** Please indicate the <u>overall project-level risks and the related risk management measures</u>: (i) as identified in the CEO Endorsement document, and (ii) progress to-date. Please expand the table as needed.

Describe in tabular form the risks observed and priority mitigation activities undertaken during the reporting period in line with the project document. Note that risks, risk level and mitigations measures should be consistent with the ones identified in the CEO Endorsement/Approval document. Please also consider the project's ability to adopt the adaptive management approach in remediating any of the risks that had been

	(i) Risks at CEO stage	(i) Risk level FY 21	(i) Risk level FY 22	(i) Mitigation measures	(ii) Progress to-date	New defined risk <sup>5</sup>
1	Lack of institutional support for PCB management related policy.	Modest risk (M)	Low risk (L)	Get involved in and support the National Commission on POPs in order to build support for the project among relevant stakeholders and to allow members of the Commission to contribute to project development and decision-making. Members/stakeholders include representatives of the main ministries and government organizations.	The PMU has actively participated in all the meetings convened by the CNC COP Secretariat. Progress and achievements obtained during the implementation of the project have been shared in this platform. One of the achievements of this platform was to establish direct communication with the MSPAS through the CNC COP to manage DDT pesticides	□L
2	Lack of interest from the public or private sector; due to fear for additional obligations to eliminate equipment containing PCB, without appropriate financial support	Low risk (L)	Low risk (L)	The establishment of a business plan for replacing PCB- contaminated equipment and facilitating its elimination will be addressed at project implementation.  These financial measures will be integrated into the PCB elimination and disposal strategy to be developed. Cost-benefit analysis and alternatives will be discussed with involved companies' coordinators.	Since the Project developed the necessary tools for the ESM of PCB, the stakeholders have shown commitment in implementing appropriate plans for the management of these pollutants.  During the elimination stage of the project, many stakeholders have subsequently expressed interest in continuing to develop projects for the elimination of PCBs in the country supported by international entities.	_L
3	Technical staff, particularly those having direct contact with PCB and DDT-wastes will be excessively exposed.	Low risk (L)	Low risk (L)	Technical staff will be trained on all safety precautions concerning handling, packaging, transportation and disposal of PCB and DDT-wastes. Protective clothes and equipment will be provided to technical staff. Waste storage facilities will be properly guarded to prevent non-authorised admittance.	The project provided training workshops to all interested stakeholders, including both technical and administrative staff, government and others. Adequate security supplies have been delivered for the management of these pollutants. Prior to project closure, more security supplies will be provided to MARN to follow the guidelines established	
4	Environmental pollution through the management and transportation of PCB-containing equipment	Lowrisk (L	Low risk (L	Training will be provided to all technical staff, project personnel and companies engaged in PCB management and transportation. Contingency plans will be developed in all stages of POPs waste management	According to the developed workshops, in which technical capacities have been strengthened, pollution related to management and transportation represents a very low risk as long as regulations and follow-up of the guidelines developed are applied for this purpose.	
5	Occupational and environmental risks concerning the management of the interim storage sites are not properly understood and addressed	Lowrisk (L	Low risk (L	Operational and safety standards will be introduced and well-trained staff will manage the interim storage facilities based on international technical guidelines. Emergency and contingency plans to address spill and accident response will be implemented and personnel trained accordingly. Worker health and safety issues will also be addressed in the technical guidelines.	Due to the strengthening of the technical capacities created by the project, the occupational and environmental risks due to mismanagement during temporary storage represent a very low risk, particularly when following the regulations and guidelines set for this purpose.	

.

 $<sup>^{5}\,\</sup>mathrm{New}\,$  risk added in reporting period. Check only if applicable.

6	PCB and DDT waste management related legislations and standards will not be adhered to.	Lowrisk (L	Lowrisk (L	Frequent inspections will be developed and thorough documentation will be implemented to improve compliance of the legal framework developed by the project.	The risk is low given that the stocks stored have been managed for their elimination. The stocks that can be identified later will be monitored and inspected according to the guidelines established in the legal framework	
7	Climate change risks	Low risk (L)	Low risk (L)	There will notbe significant risks associated with climate change as the technologies chosen will be BAT/BEP, excluding the emission of additional CO2 or other GHG.	The risks associated with climate change have been minimized by the technology used in disposal, making the on-site decontamination process more efficient following the BAT/BEP guidelines.	

**2.** If the project received a <u>sub-optimal risk rating (H. S)</u> in the previous reporting period, please state the <u>actions taken</u> since then to mitigate the relevant risks and improve the related risk rating. Please also elaborate on reasons that may have impeded any of the sub-optimal risk ratings from improving in the current reporting cycle; please indicate actions planned for the next reporting cycle to remediate this.

Not applicable	

3. Please indicate any implication of the COVID-19 pandemic on the progress of the project.

Measures implemented during the pandemic are still being applied, in line with national guidelines on how to handle COVID-19.

General guidelines nationwide to protect all persons include:

- Meeting restrictions, avoiding clusters. Limited capacity is established through the COVID alert level system.
- Use of facemasks, sanitiser, and maintaining 2m distance between persons.
- Constant hand washing with soap.

A vaccination plan is applied by health authorities.

To avoid spreading infections, MERN has taken some action plans to sanitize work areas, and even suspended staff during working hours. These action plans reduce working schedules, affecting communications and requests carried out by the project.

4. Please clarify if the project is facing delays and is expected to request an extension.

Considering the implications of the Covid19 pandemic such as temporary office closures and international logistics complications due to the crisis of maritime containers for the transport of hazardous substances and waste, adjusting the work plan is necessary to allow project completion and its final evaluation.

The company hired to develop the elimination activities was SETCAR, S.A. The company experienced delays in their activities and amendments of their contract was needed. Extension was issued until December 2022, thus extending the time of execution of this stage. More information on this is available in section VIII. Implementation progress.

The project end was planned for March 31, 2022, however, for the reasons stated above, it was extended to December 2022.

**5.** Please provide the **main findings and recommendations of completed MTR**, and elaborate on any actions taken towards the recommendations included in the report.

If the project has undergone a Mid-Term Review, please summarize the outcome and elaborate on specific actions taken towards implementing the recommendations included in the report.

NB: The information provided in this section will be used by the GEF Secretariat to measure the project's ability to adopt an <u>adaptive management approach</u>. This will be measured through the assignment of a <u>project-level proactivity index</u>.

# IV. Environmental and Social Safeguards (ESS)

1. As part of the requirements for projects from GEF-6 onwards, and based on the screening as per the

	IDO Environmental and Social Safeguards Policies and Procedures (ESSPP), which category is the ject?
	Category A project
	Category B project
	Category C project
(Ву	$selecting\ Category\ C,\ I\ confirm\ that\ the\ E\&S\ risks\ of\ the\ project\ have\ not\ escalated\ to\ Category\ A\ or\ B).$

#### Notes on new risks:

- If new risks have been identified during implementation due to changes in, i.e. project design or context, these should also be listed in (ii) below.
- If these new/additional risks are related to Operational Safeguards #2, 3, 5, 6, or 8, please consult with UNIDO GEF Coordination to discuss next steps.
- Please refer to the UNIDO <u>Environmental and Social Safeguards Policies and Procedures</u> (ESSPP) on how to report on E&S issues.

Please expand the table as needed.

	E&S risk	Mitigation measures undertaken during the reporting period	Monitoring methods and procedures used in the reporting period
(i) Risks identified in ESMP at time of CEO Endorsement	N/A	N/A	N/A
(ii) New risks identified during project implementation (if not applicable, please insert 'NA' in each box)	N/A	N/A	N/A

## V. Stakeholder Engagement

1. Using the previous reporting period as a basis, please provide information on **progress, challenges and outcomes** regarding engagement of stakeholders in the project (based on the Stakeholder Engagement Plan or equivalent document submitted at CEO Endorsement/Approval).

The previous report described the start of the activity for the elimination of equipment and dielectric oils with PCBs and DDT pesticides. This report updates the most relevant aspects of the process of eliminating equipment, oil and waste contaminated with PCBs.

The process consisted of identifying and selecting equipment based on criteria previously approved by the Project Steering Committee and subsequently collecting and temporarily storing all equipment in a warehouse. The treatment of these contaminants was divided in two phases, the first was carried out in situ, in the temporary storage warehouse; during this phase, 109 m3 of dielectric oil with concentrations lower than 2000 ppm were decontaminated. In the second phase everything that could not be treated locally for incineration (equipment with concentrations greater than 2,000 ppm) was exported or sent for decontamination. Once the first phase of local treatment was carried out, the export weight decreased from 356.43 tons to 247.43 tons of equipment contaminated with PCBs for export.

Although the equipment was collected and stored in the same warehouse, some difficulties, including the COVID-19 pandemic, and others, for example, marine companies' policies, made it difficult to obtain containers to transport them to their final destination. Likewise, obtaining the authorizations of each transit country for the waste cargo has been a lengthy process. The challenge has been to establish a precise work plan that meets the guidelines for exporting chemical waste and executing the decontamination process within the lifespan of the project (until November 2022).

During project implementation, one of the stakeholders – INDE - helped by offering the use of a warehouse to store all the equipment for elimination. A technical cooperation agreement was drawn up on this basis, reflecting the disposition and good will of this institution with regard to the environmentally sound management of PCBs. Providing the temporary storage warehouse and enhancing the electrical connection so that the local treatment system could work reflects INDE's commitment to the ESM of PCBs.

Given the nature of the project in Guatemala, the cooperation agreement was signed and supported by the Ministry of Environment and Natural Resources, who promised to carry out the necessary steps through the project. All the challenges presented by the export process made it necessary to extend the validity of the agreement through two addenda, the first was signed in November 2021 and the second in May 2022.

**2.** Please provide any feedback submitted by national counterparts, GEF OFP, co-financiers, and other partners/stakeholders of the project (e.g. private sector, CSOs, NGOs, etc.).

Feedback received from the National Institute of Electrification INDE is quoted below:

"The PCB elimination project promoted by UNIDO and led by MARN has been an historic opportunity for an institution like INDE given the accumulation and volume of equipment and materials contaminated with PCBs that [were in possession and that] are highly harmful both for the institution's staff and for the population in general, especially given that their proper final disposal would have represented a high cost to the Institution.

Additionally, we consider that the management carried out by the people in charge of the project, both from UNIDO and from MARN, has been diligent and efficient; and we understand that the delays that have occurred are unrelated to internal management.

We consider that as a deficient part of the process in general, we can highlight the fact that the project has not been used to analyze and give the appropriate treatment to all the equipment that is still classified as suspicious, since it should have been a 100% usable opportunity; however, we believe that the Institution was able to dispose of most of the contaminated materials and equipment and it is expected that those that are still classified as suspicious do not exceed the permitted limits.

3. Please provide any relevant stakeholder consultation documents.

Please list here the documents which will be submitted in addition to the report, e.g.:

- 5816 First Amendment of the agreement between INDE and MARN.
- 5816 Second Amendment of the agreement between INDE and MARN.

All attachments are to be named as per the GEF required format, i.e.: "GEFID\_Document Title", e.g. 9714 PSC minutes.

# VI. Gender Mainstreaming

1. Using the previous reporting period as a basis, please report on the **progress** achieved **on implementing gender-responsive measures** and **using gender-sensitive indicators**, as documented at CEO Endorsement/Approval (in the project results framework, gender action plan or equivalent),.

During this year, 120 more people participated in training activities related to the project. During the entire execution of the project, 1,760 people have been trained of which 498 are women, representing 28% participation in environmental management of PCB. This indicator increased 2% compared to the last report. Thus, the participation of women in activities related to ESM of PCB is increasing at the national level, despite the limiting conditions related to the pandemic.

This trend suggests a growth in the participation of women in the electricity sector as companies are incorporating ESM into their environmental responsibility policies and procedures, through increasing women's participation in technical issues and decreasing the gap in gender inequity.

# VII. Knowledge Management

1. Using the previous reporting period as a basis, please elaborate on any **knowledge management activities** / **products**, as documented at CEO Endorsement / Approval.

The training, communication and socialization indicators of the PCB ESM have been met through the BAT/BEP guides that were developed; These workshops have continued to develop throughout the execution of the project, exceeding the objective presented in the CEO endorsement by 1000%.

Updated training sessions will be held for the Ministry's technical and administrative staff, so that staff know how to properly manage information.

2. Please list any relevant knowledge management mechanisms / tools that the project has generated.

Please list the relevant knowledge management mechanisms/tools and any documents that will be submitted in addition to the report, e.g.:

- 5816 Training PPT
- 5816\_first amendment
- 5816 second amendment

All attachments are to be named as per the GEF required format, i.e.: "GEFID\_Document Title", e.g. 9714\_Flyer.

#### VIII. Implementation progress

1. Using the previous reporting period as a basis, please provide information on **progress, challenges and outcomes a chieved/observed** with regards to project implementation.

The most important achievement of the project was to treat 109 m3 of dielectric oil locally, which required meeting many technical and administrative requirements in order to import the dechlorination equipment. This technology does not exist in Guatemala, so this showed that with proper management it is possible to import adequate technologies for the management of this type of contaminant. Carrying out this procedure locally reduced the total export weight by 36%, and the dielectric oil that was treated was recovered as a by-product of the process. The decontaminated oil was sold by SETCAR to a local company to be used as alternative fuel.

The biggest challenges during the treatment phase was importing and adapting the dechlorination machine to be used within the country. The importation took longer than expected, since this technology was unknown in the country. Consequently, the customs authority carried out extensive and specific reviews before authorizing its entry. Once the machine was set-up in the facilities, it had to be adapted to connect to the Guatemalan electrical network whose voltage and frequency differ from those of the machine. Thus, a dedicated network had to be installed and an adaptor was imported for this service. This caused delays in complying with the initially established work program, which was modified as the project progressed.

Now the project is facing the current conditions of the international shipping market and the restrictions on the transport of hazardous waste, the logistics operator has not yet booked the ship that will transport the contaminated waste to Romania and Germany, its final destination, for decontamination of equipment with PCBs, and Germany for incineration of pesticides.

**2.** Please briefly elaborate on any **minor amendments**<sup>6</sup> to the approved project that may have been introduced during the implementation period or indicate as not applicable (NA).

Please tick each category for which a change has occurred and provide a description of the change in the related textbox. You may attach supporting documentation, as appropriate.

Staff of MENR and relevant state organizations trained on all specific aspects of BAT/BEP for ESM of PCBs and wastes																							0

-											 	
Output 3.2: Hazardous waste treatment operators are trained in depth on BAT/BEP for the ESM and disposal of PCB/DDT wastes.												0
Output 3.3: Transporte rs of PCBs wastes are trained on BEP issues applicable to their activity.												0
Output 3.4: Members of pertinent professional, agricultural, industrial or other organizations, the electrical sector, NGOs and citizen groups participate in awareness workshops on ESM of PCB and DDT												7663

## X. Synergies

## 1. Synergies achieved:

Describe potential synergies arising out of UNIDO internal cooperation and/or cooperation with (external) bilateral and multilateral projects/programmes, if applicable.

In previous reports local synergies were presented, here we will present international synergies. Collaboration on the appropriate management of PCBs was extended through supporting similar projects currently being developed in Bolivia and Paraguay, establishing synergies where the experience of Guatemala was communicated.

The experience of the implementation of an accredited laboratory was shared with Bolivia. The lessons learned regarding the monitoring of the inventory of PCBs, and the experience of creating the online system was shared with Bolivia and Paraguay.

The experience obtained in the tender process for the Guatemala project was very helpful in repeating a similar process in the Bolivian project.

The experience also obtained working with SETCAR in Guatemala can be used to implement in a more efficient manner the presence of the SETCAR personnel in the Laos project when the time comes for them to go to this country and execute their contract.

The dechlorination process undertaken in the Guatemala project is also a good example of a way of treating or eliminating low concentration contaminated PCB oils. A similar process is currently being implemented

under the Bolivia project and allows for a cost effective solution to some of the contaminated PCB oils that have a PCB concentration under 2000 ppm.

The tender process that has been completed in Guatemala and Bolivia is a good experience and will allow for lessons learned to be included in this process to be undertaken in 2023.

#### 3. Stories to be shared (Optional)

Please provide a brief summary of any especially interesting and impactful project results that are worth sharing with a larger audience, and/or investing communications time in. Please include links to any stories/videos available online.

Within the objectives of the project is the elimination of DDT and Dieldrin pesticides, under the management of the Ministry of Public Health and Social Assistance (MSPAS). Through follow-up meetings and the exchange of information, contact was established with the National Commission of Pesticides of MSPAS; this Commission, upon seeing how these POP pesticides were managed, has been interested in seeking support from entities such as UNIDO, to make feasible the elimination of other obsolete pesticide stocks, which have the potential to contaminate and cause damage to health.

## **EXPLANATORY NOTE**

- 1. **Timing & duration:** Each report covers a twelve-month period, i.e. 1 July 2021 30 June 2022.
- 2. **Responsibility:** The responsibility for preparing the report lies with the project manager in consultation with the Division Chief and Director.
- 3. **Evaluation:** For the report to be used effectively as a tool for annual self-evaluation, project counterparts need to be fully involved. The (main) counterpart can provide any additional information considered essential, including a simple rating of project progress.
- 4. **Results-based management**: The annual project/programme progress reports are required by the RBM programme component focal points to obtain information on outcomes observed.

Global Environmental Objectives (GEOs) / Development Objectives (DOs) ratings								
Highly Satisfactory (HS)	Project is expected to achieve or exceed <u>all</u> its major global environmental objectives, and yield substantial global environmental benefits, without major shortcomings. The project can be presented as "good practice".							
Satisfactory (S)	Project is expected to <u>achieve most</u> of its <u>major</u> global environmental objectives, and yields satisfactory global environmental benefits, with only minor shortcomings.							
Moderately Satisfactory (MS)	Project is expected to <u>achieve most</u> of its major <u>relevant</u> objectives but with either significant shortcomings or modes overall relevance. Project is expected not to achieve some of its major global environmental objectives or yield some of the expected global environmental benefits.							
Moderately Unsatisfactory (MU)	Project is expected to achieve <u>some</u> of its major global environmental objectives with major shortcomings or is expected to <u>achieve only some</u> of its major global environmental objectives.							
Unsatisfactory (U)	Project is expected <u>not</u> to achieve <u>most</u> of its major global environmental objectives or to yield any satisfactory global environmental benefits.							
Highly Unsatisfactory (HU)	The project hasfailed to achieve, and is not expected to achieve, <u>any</u> of its major global environmental objectives with no worthwhile benefits.							

Implementation Progress (IP)							
Highly Satisfactory (HS)	Implementation of <u>all</u> components is in substantial compliance with the original/formally revised implementation planfor the project. The project can be presented as "good practice".						
Satisfactory (S)	Implementation of <u>most</u> components is in substantial compliance with the original/formally revised plar except for only few that are subject to remedial action.						
Moderately Satisfactory (MS)	Implementation of <u>some</u> components is in substantial compliance with the original/formally revised plan with some components requiring remedial action.						
Moderately Unsatisfactory (MU)	Implementation of <u>some</u> components is <u>not</u> in substantial compliance with the original/formally revised plan with most components requiring remedial action.						
Unsatisfactory (U)	Implementation of $\underline{most}$ components in $\underline{not}$ in substantial compliance with the original/formally revisible.						
Highly Unsatisfactory (HU)	Implementation of <u>none</u> of the components is in substantial compliance with the original/formally revised plan.						

Risk ratings							
Risk ratings will access the overall risk of factors internal or external to the project which may affect implementation or prospects for achieving project objectives. Risk of projects should be rated on the following scale:							
High Risk (H)	There is a probability of greater than <b>75%</b> that assumptions may fail to hold or materialize, and/or the project may face high risks.						
Substantial Risk (S)	There is a probability of between 51% and 75% that assumptions may fail to hold or materialize, and the project may face substantial risks.						
Moderate Risk (M)	There is a probability of between <b>26%</b> and <b>50%</b> that assumptions may fail to hold or materialize, and the project may face only moderate risk.						
Low Risk (L)	There is a probability of up to 25% that assumptions may fail to hold or materialize, and/or the project may face only low risks.
