

## FAO-GEF Project Implementation Report

### 2021 – Revised Template

Period covered: 1 July 2020 to 30 June 2021

### 1. Basic Project Data

#### General Information

<b>Region:</b>	Africa																																																									
<b>Country (ies):</b>	Benin																																																									
<b>Project Title:</b>	Disposal of POPs and Obsolete Pesticides and Strengthening Life-Cycle Management of Pesticides in Benin																																																									
<b>FAO Project Symbol:</b>	GCP/BEN/056/GFF																																																									
<b>GEF ID:</b>	4756																																																									
<b>GEF Focal Area(s):</b>	Chemicals - POPs																																																									
<b>Project Executing Partners:</b>	Ministries of Agriculture, Environment and Health																																																									
<b>Project Duration:</b>	48 months																																																									
<b>Project coordinates:</b> ( <a href="#">Ctrl+Click here</a> )	<p><b>Component 1:</b></p> <p><b>Coordinates of the obsolete stock sites:</b></p> <table border="1"> <tr><td>Porto-Novo:</td><td>N 6° 29' 47"</td><td>E 2° 36' 12"</td></tr> <tr><td>Cotonou:</td><td>N 6° 21' 55"</td><td>E 2° 25' 6"</td></tr> <tr><td>Pobè:</td><td>N 6° 58' 48"</td><td>E 2° 39' 53"</td></tr> <tr><td>Zogbodomey:</td><td>N 7° 1' 4"</td><td>E 2° 10' 58"</td></tr> <tr><td>Parakou:</td><td>N 9° 20' 13"</td><td>E 2° 37' 49"</td></tr> <tr><td>Kandi:</td><td>N 11° 8' 3"</td><td>E 2° 56' 19"</td></tr> <tr><td>Banikoara:</td><td>N 11° 20' 22"</td><td>E 2° 27' 32"</td></tr> <tr><td>Natitingou:</td><td>N 10° 18' 15"</td><td>E 1° 22' 46"</td></tr> </table> <p><b>- Coordinates contaminated sites:</b></p> <table border="1"> <tr><td>Porto-Novo:</td><td>N 6° 29' 47"</td><td>E 2° 36' 12"</td></tr> <tr><td>Bohicon:</td><td>N 7° 10' 41"</td><td>E 2° 4' 0"</td></tr> <tr><td>Malanville:</td><td>N 11° 52' 5"</td><td>E 3° 22' 59"</td></tr> </table> <p><b>Component 2: Coordinates of the pilot container of FFS villages</b></p> <p><b>Department of Borgou:</b></p> <table border="1"> <tr><td>Nikki, village Soumarou:</td><td>N 9° 53' 26"</td><td>E 3° 6' 25"</td></tr> <tr><td>Kalalé, village Gbessassi Bouka:</td><td>N 10° 13' 12"</td><td>E 3° 7' 48"</td></tr> <tr><td>Bembèrèkè, Village Ina:</td><td>N 9° 58' 34"</td><td>E 2° 43' 30"</td></tr> </table> <p><b>Department of Alibori:</b></p> <table border="1"> <tr><td>Gogounou, Village Ouara:</td><td>N 10° 52' 0"</td><td>E 2° 51' 0"</td></tr> <tr><td>Kandi, Village Padé:</td><td>N 11° 5' 0"</td><td>E 2° 54' 0"</td></tr> <tr><td>Kandi, Village Pèdè:</td><td>N 11° 7' 43"</td><td>E 2° 56' 13"</td></tr> <tr><td>Banikoara, Village Godou:</td><td>N 11° 14' 0"</td><td>E 2° 25' 0"</td></tr> <tr><td>Ségbana, Village Kambara:</td><td>N 10° 55' 12"</td><td>E 3° 29' 24"</td></tr> </table>	Porto-Novo:	N 6° 29' 47"	E 2° 36' 12"	Cotonou:	N 6° 21' 55"	E 2° 25' 6"	Pobè:	N 6° 58' 48"	E 2° 39' 53"	Zogbodomey:	N 7° 1' 4"	E 2° 10' 58"	Parakou:	N 9° 20' 13"	E 2° 37' 49"	Kandi:	N 11° 8' 3"	E 2° 56' 19"	Banikoara:	N 11° 20' 22"	E 2° 27' 32"	Natitingou:	N 10° 18' 15"	E 1° 22' 46"	Porto-Novo:	N 6° 29' 47"	E 2° 36' 12"	Bohicon:	N 7° 10' 41"	E 2° 4' 0"	Malanville:	N 11° 52' 5"	E 3° 22' 59"	Nikki, village Soumarou:	N 9° 53' 26"	E 3° 6' 25"	Kalalé, village Gbessassi Bouka:	N 10° 13' 12"	E 3° 7' 48"	Bembèrèkè, Village Ina:	N 9° 58' 34"	E 2° 43' 30"	Gogounou, Village Ouara:	N 10° 52' 0"	E 2° 51' 0"	Kandi, Village Padé:	N 11° 5' 0"	E 2° 54' 0"	Kandi, Village Pèdè:	N 11° 7' 43"	E 2° 56' 13"	Banikoara, Village Godou:	N 11° 14' 0"	E 2° 25' 0"	Ségbana, Village Kambara:	N 10° 55' 12"	E 3° 29' 24"

-----------------------------	----------------------------

**Component 3: Coordinates of ministries/laboratories**

Ministère de l'Agriculture, de l'Elevage et de la Pêche:	N 6° 21' 26" E 2° 23' 3"
Laboratoire Central de Contrôle de la Sécurité Sanitaire des Aliments:	N 6° 22' 0" E 2° 26' 0"

**Component 4: Coordinates of research institute and FFS villages**

Institut International d'Agriculture Tropical (IITA):	N 6° 22' 0" E 2° 21' 0"
---	-------------------------

**FFS vegetable crops villages:****Department of Alibori**

Malanville, village Madécali:	N 11° 42' 26" E 3° 32' 54"
Malanville, village Tomboutou:	N 11° 51' 18" E 3° 17' 21"
Malanville, village Kambouo Tounga	N 11° 48' 19" E 3° 28' 26"
Malanville, village Garou Tédji:	N 11° 48' 19" E 3° 28' 26"
Malanville, village Monkassa:	N 11° 51' 31" E 3° 23' 14"
Karimama, village Birni-Lafia:	N 11° 58' 42" E 3° 13' 29"
Karimama, village Karigui:	N 11° 58' 42" E 3° 13' 29"

**FFS cotton-maize villages:****Department of Borgou**

Bembèrèkè, village Ina:	N 9° 58' 34" E 2° 43' 30"
Bembèrèkè, village Guessou-Sud:	N 9° 58' 34" E 2° 43' 30"
Nikki, village Soumarou:	N 9° 53' 26" E 3° 6' 25"
Kalalé, village Gbessassi Bouka:	N 10° 13' 12" E 3° 7' 48"

**Department of Alibori**

Gogounou, Village Ouara:	N 10° 52' 0" E 2° 51' 0"
Kandi, Village Padé:	N 11° 5' 0" E 2° 54' 0"
Kandi, Village Pèdè:	N 11° 7' 43" E 2° 56' 13"
Kandi, Village Angaradébou:	N 11° 18' 41" E 3° 2' 22"
Kandi, Village Bensékou:	N 10° 59' 53" E 3° 8' 56"
Banikoara, Village Godou:	N 11° 14' 0" E 2° 25' 0"
Ségbana, Village Kambara:	N 10° 55' 12" E 3° 29' 24"
Ségbana, Village Liboussou:	N 10° 55' 12" E 3° 29' 24"
Ségbana, Village Piami:	N 10° 55' 48" E 3° 41' 24"

**Milestone Dates:**

<b>GEF CEO Endorsement Date:</b>	31/07/2014
<b>Project Implementation Start Date/EOD :</b>	22/03/2015
<b>Proposed Project Implementation End Date/NTE<sup>1</sup>:</b>	21/03/2021
<b>Revised project implementation end date (if applicable) <sup>2</sup></b>	30/09/2021
<b>Actual Implementation End Date<sup>3</sup>:</b>	N/A

**Funding**

<b>GEF Grant Amount (USD):</b>	1,830,000 USD
<b>Total Co-financing amount as included in GEF CEO Endorsement Request/ProDoc<sup>4</sup>:</b>	10,580,625 USD
<b>Total GEF grant disbursement as of June 30, 2021 (USD m):</b>	1,614,239 USD
<b>Total estimated co-financing materialized as of June 30, 2021<sup>5</sup></b>	9,673,618 USD

**Review and Evaluation**

<b>Date of Most Recent Project Steering Committee Meeting:</b>	06 June 2019
<b>Expected Mid-term Review date<sup>6</sup>:</b>	February – March 2018
<b>Actual Mid-term review date:</b>	November 2018
<b>Mid-term review or evaluation due in coming fiscal year (July 2021 – June 2022)<sup>7</sup>:</b>	No
<b>Expected Terminal Evaluation Date:</b>	December 2020 – March 2021
<b>Terminal evaluation due in coming fiscal year (July 2021 – June 2022):</b>	No

---

<sup>1</sup> As per FPMIS

<sup>2</sup> In case of a project extension.

<sup>3</sup> Actual date at which project implementation ends - only for projects that have ended.

<sup>4</sup> This is the total amount of co-financing as included in the CEO document/Project Document.

<sup>5</sup> Please see last section of this report where you are asked to provide updated co-financing estimates. Use the total from this Section and insert here.

<sup>6</sup> The MTR should take place about halfpoint between EOD and NTE – this is the expected date

<sup>7</sup> Please note that the FAO GEF Coordination Unit should be contacted six months prior to the expected MTR date

<b>Tracking tools/ Core indicators required<sup>8</sup></b>	Yes
---	-----

**Ratings**

<b>Overall rating of progress towards achieving objectives/ outcomes (cumulative):</b>	Satisfactory
<b>Overall implementation progress rating:</b>	Satisfactory
<b>Overall risk rating:</b>	Moderate

**Status**

<b>Implementation Status</b> <i>(1<sup>st</sup> PIR, 2<sup>nd</sup> PIR, etc. Final PIR):</i>	6 <sup>th</sup> and final PIR
--	-------------------------------

**Project Contacts**

<b>Contact</b>	<b>Name, Title, Division/Institution</b>	<b>E-mail</b>
<b>Project Manager / Coordinator</b>	Jacqueline SAGBOHAN	<a href="mailto:sagbohanjacqueline@yahoo.fr">sagbohanjacqueline@yahoo.fr</a>
<b>Lead Technical Officer</b>	Oxana PERMINOVA	<a href="mailto:Oxana.Perminova@fao.org">Oxana.Perminova@fao.org</a>
<b>Budget Holder</b>	Mphumuzi SUKATI	<a href="mailto:Mphumuzi.Sukati@fao.org">Mphumuzi.Sukati@fao.org</a>
<b>GEF Funding Liaison Officer</b>	Kuena MOREBOTSANE	<a href="mailto:Kuena.Morebotsane@fao.org">Kuena.Morebotsane@fao.org</a>

---

<sup>8</sup> Please note that the Tracking Tools are required at mid-term and closure for all GEF-4 and GEF-5 projects. Tracking tools are not mandatory for Medium Sized projects = < 2M USD at mid-term, but only at project completion. The new GEF-7 results indicators (core and sub-indicators) will be applied to all projects and programs approved on or after July 1, 2018. Also projects and programs approved from July 1, 2014 to June 30, 2018 (GEF-6) must apply core indicators and sub-indicators at mid-term and/or completion

## 2. Progress Towards Achieving Project Objectives and Outcome (DO)

*(All inputs in this section should be cumulative from project start, not annual)*

Project objective and Outcomes (as indicated at CEO Endorsement)	Description of indicator(s) <sup>9</sup>	Baseline level	Mid-term target <sup>10</sup>	End-of-project target	Level at 30 June 2021	Progress rating <sup>11</sup>
<b>Objective(s):</b> To eliminate existing obsolete pesticides, including POPs and associated wastes, and to strengthen the capacity for sound pesticide management in order to prevent future accumulation.						
<b>Outcome 1:</b> Identified risks from existing obsolete stocks eliminated and risks from heavily pesticide-contaminated sites reduced	1a. Up to 200 tonnes of POPs and other obsolete pesticides disposed of in an environmentally sound manner.	504 tonnes of obsolete pesticides and 150 tonnes associated wastes inventoried in 2012. 380 tonnes endosulfan disposed under GCP/BEN/055/JPN	213 tonnes	213 tonnes	<ul style="list-style-type: none"> <li>Inventory of obsolete pesticides including POPs (total quantity of 1631 t.) available</li> <li>Environmental management plan and risk assessment available for 213 tonnes prioritized for safeguarding and disposal available</li> <li><u>Contract between FAO and VEOLIA ES Field Services</u> signed and started implementation for safeguarding stowage, transport, export and disposal of 213 tonnes of obsolete pesticides.</li> <li>Contract 020/BN/AGPM-CPA 343809 of 27/03/2020</li> <li>Preparation by Veolia of Basel notification documents</li> </ul>	<b>S</b>

<sup>9</sup> This is taken from the approved results framework of the project. Please add cells when required in order to use one cell for each indicator and one rating for each indicator.

<sup>10</sup> Some indicators may not identify mid-term targets at the design stage (refer to approved results framework) therefore this column should only be filled when relevant.

<sup>11</sup> Use GEF Secretariat required six-point scale system: **Highly Satisfactory** (HS), **Satisfactory** (S), **Marginally Satisfactory** (MS), **Marginally Unsatisfactory** (MU), **Unsatisfactory** (U), and **Highly Unsatisfactory** (HU).

					<ul style="list-style-type: none"> <li>• Signature of Basel notification documents by the Secretary General of the Ministry of Agriculture, Livestock and Fisheries (MAEP) as owner/exporter of obsolete pesticide waste</li> <li>• Development of the Health Safety Environment Plan (PSSE) for the securing, storage, export and complete safe disposal of obsolete pesticides in Benin</li> <li>• Updating of the Task-Based Risk Assessment (ERBT) of the PSSE</li> <li>• Validation of the PSSE by the Benin Environment Agency (ABE)</li> <li>• Obtaining the 1<sup>st</sup> Basel notification number <b>BJ A4030/6P.7.20</b> from the Ministry of the Living Environment and Sustainable Development (MCVDD)</li> <li>• Agreement of transit countries (Equatorial Guinea, Cameroon, Spain, France, United Kingdom, Belgium, Netherlands and Germany) of obsolete pesticide waste</li> <li>• Import of materials and equipment for securing obsolete pesticides on behalf of Veolia</li> <li>• Training of workers on the safe handling of obsolete pesticides</li> <li>• Reconditioning of obsolete pesticide waste (PO) carried out in the thirteen (13) priority stores selected in the security contract.</li> <li>• As of 06/08/2021, the quantity of reconditioned POs is estimated at <b>167,714 tonnes</b> or 78,86% of the</li> </ul>
--	--	--	--	--	--

					<p>contract. The quantity actually weighed is <b>128,835 tonnes</b> or 60,58% compared to the quantity covered by the contract.</p> <ul style="list-style-type: none"> <li>• Systematic decontamination of stores at the end of PO waste reconditioning operations</li> <li>• Obtaining the export authorization for obsolete pesticide waste from the Directorate General of Customs and Indirect Rights (DGDDI)</li> <li>• A first export of PO waste is carried out in March 2021 for a net weight of <b>71.57 tonnes</b> distributed in six (06) containers for their evacuation and elimination in Switzerland. It should be noted that this 1<sup>st</sup> export has already arrived at the incineration plant in Switzerland for its disposal.</li> <li>• Five (05) obsolete pesticide waste containers with a net weight of <b>57.265 tonnes</b> are ready for export.</li> <li>• Preparation by Veolia of the documents for the 2<sup>nd</sup> Basel notification following the end of the 1st notification scheduled for June 30, 2021</li> <li>• Signature of the documents of the 2<sup>nd</sup> Basel notification by the SG / MAEP</li> <li>• Submission to the MCVDD of the file of the 2<sup>nd</sup> Basel notification</li> <li>• Obtaining of the 2<sup>nd</sup> number of the Basel notification <b>BJ A4030/1P.5.21</b> covering the period from May 15, 2021 to January 1, 2022 for the transit of the rest of obsolete pesticides to be</li> </ul>
--	--	--	--	--	--

					<p>evacuated outside the national territory.</p> <ul style="list-style-type: none"> <li>• Ongoing preparation of letters of agreement from transit countries (Togo, Equatorial Guinea, Cameroon, Spain, Morocco, France, United Kingdom, Belgium, Netherlands and Germany) for obsolete pesticide waste.</li> </ul>	
	<p>1b. At least 2 contaminated sites with reduced risk of exposure/contamination level (50% reduction).</p>	<p>3 sites investigated and EA and EMP produced.</p> <p>Baseline contamination of methyl-parathion at Oganla site according to EMP developed by GCP/BEN/055/JPN = 0,074mg/kg (depth 10cm) to 0,047mg/kg (120 cm)</p> <p>New site reported in 2013 to be investigated</p>	<p>Risk reduction strategies for 2 contaminated sites developed and approved, and work started.</p>	<p>50% reduction in contamination or exposure levels</p>	<ul style="list-style-type: none"> <li>• 2 sites decontaminated: Malanville (179, 5 Kg of orthène 75 SP) and Bohicon (12,775 kg of thioral): Conceptual site modelling and Environmental Management Plans (EMPs) delivered and validated by Agence Béninoise pour l' Environnement (ABE) decontamination undertaken and monitoring mission confirming decontamination successful</li> <li>• Additional site (1) is finalizing decontamination: Oganla (including parathion methyl and DDT, DDD and DDE): <ul style="list-style-type: none"> <li>- characterization and EMP delivered</li> <li>- Bio-remediation with Vétiver sp et Jatropha sp in progress</li> </ul> </li> <li>• Additional sites (2) rapid environmental assessment of contamination delivered, and EMP in validation : Djassin and Djohounta (POPs)</li> <li>• Investigations carried out during inventory activities for obsolete pesticide stocks in Benin revealed a number of contaminated sites, 4 of</li> </ul>	<p><b>HS</b></p>

					<p>which had been deemed a priority. The choice of these 4 contaminated sites took into account the persistent toxicity in the soil and the odor of the contaminants for the reduction of health and environmental risks for the communities living near these sites.</p> <ul style="list-style-type: none"> <li>• <u>Evaluation of capacity</u> of the National Laboratory of the Central Food Safety Laboratory (LCSSA) for pesticide soil contamination analysis undertaken and recommendation provided</li> <li>• Excavation operation of <b>21,503 tonnes</b> of dieldrin and aldrin sludge and contaminated earth at the dump of the polluted site of Djassin</li> <li>• Ongoing update of the work plan for the sanitation of the Djassin site</li> </ul>	
<b>Outcome 2:</b> Risks to the environment and human health from empty pesticide containers used in cotton production areas reduced	2a) Number of empty containers triple rinsed, collected and stored awaiting recycling	3.9m containers imported over the last 5 years, 0.5m per year in cotton zone, 8.8 tonnes containers in national inventory	75,000 in PY3	150,000	<ul style="list-style-type: none"> <li>• Collection of 5,465 empty containers in ten (10) villages in seven (07) municipalities in the departments of Borgou and Alibori through a partnership with the NGO Bethesda</li> <li>• Benin did not have a management plan for empty pesticide packaging in the regulatory texts on the management of pesticides. The project decided and retained to implement a pilot plan for the management of empty pesticide packaging, which is the first step in reducing the risks of health and environmental pollution. These packaging are reused by farming communities living in cotton growing</li> </ul>	<b>S</b>

					<p>areas, giving them a second life cycle. The pilot plan is a demonstration of the management plan on a reduced scale with 200 producers and is installed only in two departments of North Benin which is found in the cotton basin.</p> <p>Following the results obtained from the pilot plan, a national sustainable management plan for empty packaging was drawn up for the national management of empty pesticide packaging, which is now the responsibility of the Plant Protection Service of the Production Department Plant of the Ministry of Agriculture, Livestock and Fisheries by decree No. 097/MAEP/DC/SGM /DPV/CJ/SA/091SGG18 of December 18, 2018 laying down the procedures for managing empty packaging of pesticides and biopesticides as well as the procedures for distributing the related costs.</p> <ul style="list-style-type: none"> <li>• Treatment and recycling of 5,465 empty pesticide containers into finished products for non-food use</li> <li>• Improvement of Bethesda structures to comply to international standards for recycling empty pesticide containers carried</li> <li>• Training of 20 trainers and 200 cotton and maize farmers on risks of empty pesticide containers and risk reduction options (triple rinsing and perforation and pilot recycling</li> </ul>	
--	--	--	--	--	--	--

					<p>scheme) through Farmer Field Schools (FFS).</p> <ul style="list-style-type: none"> <li>• Poster produced by the project and delivered to 13 FFS</li> <li>• National strategy for empty container management including lessons learned from monitoring pilot scheme available</li> <li>• Analysis of waste water from the treatment and recycling of empty pesticide packaging</li> <li>• Results of the analyzes: the results of the analyzes of the waste water revealed the presence of the following chemical substances: Acetamiprid (0.18 µg/L), Cypermethrin (0.27 µg/L), Chlorpyrifos (0.45 µg/L) , Emamectin Benzoate (0.12 µg/L), Lead (0.72 mg/L) and Cadmium (0.48 mg/L)</li> <li>• <b>Comments from the international consultant in the management of Empty Pesticide Packaging (EVP):</b> Based on Law No. 98-030 of February 12, 1999 on the framework law on the environment and Decree No. 2001-109 of April 4 2001 setting wastewater quality standards in the Republic of Benin, it should be possible to discharge contaminated wastewater in small quantities. However, this procedure is not recommended. It is more environmentally friendly to evaporate waste water by exposing it</li> </ul>
--	--	--	--	--	--

					<p>to the sun, and to dispose of residues with obsolete pesticide stocks or, failing that, to store residues in a hazardous waste landfill for their future elimination.</p> <ul style="list-style-type: none"> <li>Preparation of the final report being validated by the international consultant on LoA activities between FOA and NGO Bethesda for the treatment/recycling of empty pesticide packaging</li> </ul>	
<p><b>Outcome 3:</b> Regulatory framework and institutional capacity for the sound management of pesticides throughout their lifecycle strengthened</p>	<p>3a) Revised national legislation in compliance with international and regional obligations adopted by PY4.</p>	<p>Legislation in Benin does not yet support the regional CILSS-ECOWAS-UEMOA harmonization which it joined in 2012.</p>	<p>Review meetings for legislation</p>	<p>Decrees adopted</p>	<ul style="list-style-type: none"> <li>Harmonisation of national legislation on pesticide management discussed at national stakeholder workshop and with CILSS experts (linked with output 3.2.)</li> <li>ECOWAS Harmonization of legislation on inspection and control (linking with output 3.2.)</li> <li>Decree No. 2018-172 of May 16, 2018 laying down the terms of application of community regulations on the approval of pesticides issued and signed by President of Benin (linked with output 3.2.)</li> </ul>	<p><b>S</b></p>
	<p>3b) Management Committee (NPMC) and a national system for inspection and quality control of pesticides operational by PY3.</p>	<p>Mandate for pesticide control transferred to ABSSA but not yet operational. The registration committee, CNAC, does not have access to official government budget but financed by</p>	<p>NPMC established</p> <p>Two entry points equipped</p>	<p>National system for inspection and quality control operational</p>	<ul style="list-style-type: none"> <li>Decrees (2) revised through FAO work under this component was issued by the Council of Ministers and signed by the President of the Republic <ol style="list-style-type: none"> <li>Decree N°2018-171 du 16 mai 2018 portant création, attributions, organisation et fonctionnement du Comité</li> </ol> </li> </ul>	<p><b>S</b></p>

		<p>registration fees. Neither national strategy nor sustainable funding mechanism for pesticide control.</p>			<p>National de Gestion des Pesticides (CNGP)</p> <p>2. Decree N°2018-172 du 16 mai 2018 fixant les modalités d’application des règlements communautaires sur l’homologation des pesticides en République du Bénin</p> <ul style="list-style-type: none"> <li>• Decrees on the harmonisation and implementation of Community regulations on quality control and management of agricultural inputs in the ECOWAS/UEMOA/CILSS area discussed in workshop organized by the Plant Protection Service/DPV/MAEP and awareness campaign agreed. <b>Output 1.2</b> Risks from 2 highly contaminated sites quantified, remediation strategies developed and implemented	Jul 2018	10% Risk quantified at priority sites. ToR for Rapid Environmental Assessment for a site at Assantoun, with a "hot zone" estimated at 900m <sup>2</sup>	50% - Signature by Alterra University of Wageningen of the Memorandum of Understanding between FAO and Alterra for sanitation/ reduction of the risks of polluted sites in Benin - Mission to investigate the rapid environmental assessment of the heavily contaminated Djohounta site (ex Assantoun, Zou	60% - Development of Specific Environmental Management Plans (EMPs) of the polluted sites of Djassin, Malanville and Bohicon (ex CARDER Zou) - Submission and validation by ABE of the EMPs of the polluted sites of Malanville and Bohicon - Update of the Djassin EMPs according to the recommendations	100% - Validation of the Specific Environmental Management Plan (PGEs) of the contaminated site of Djassin	-	-	100%	

			<p>department, Bohicon commune) (Mission Alterra in Benin August 3 to 10, 2016)</p> <ul style="list-style-type: none"> <li>- Mission to realize the conceptual models of the contaminated sites of Malanville, Djassin and Bohicon to better refine the technical options of risk reduction of these sites.</li> </ul>	<p>of the national team resulting from the extraordinary meeting of the PMU and also to the new observations made by the technical team and the international consultant specialized in decontamination of polluted sites</p> <ul style="list-style-type: none"> <li>- Submission of the Djassin PGE to ABE for final validation</li> </ul>					
Mar 2020	<p>50% (one site decontaminated)- Reduction in contamination level</p> <p>ToR (national consultant) for decontamination of site at Oganla. Bio-remediation commenced in 2015.</p>	<p>Follow-up and maintenance of the landfarm installed by the installation of the detoxification plants (Vetiver sp and Jatropha sp) of the decontaminated site of Oganla: Cut after eight (08) months of plant growth of Vetiver sp for homogenization and replacement of one hundred and twenty Eight (128) plants out of five hundred and fifty (550) plants planted during the remediation of the site.</p>	<p>100%</p> <ul style="list-style-type: none"> <li>- Realization of the decontamination operations of the polluted sites of Malanville and Bohicon</li> <li>- Follow-up of the maintenance of the detoxification plants (Vetiver and Jatropha) of the landfarm of the decontaminated site of Oganla: realization of the 3<sup>rd</sup> and 4<sup>th</sup> cut of Vetiver and Jatropha plants for the reinforcement of the landfarm in organic matter in order to accelerate</li> </ul>	<ul style="list-style-type: none"> <li>- Follow-up by maintenance and watering of detoxification plants (Vetiver and Jatropha) landfarm decontaminated sites of Oganla, Malanville and Bohicon</li> <li>- Realization of the monitoring and evaluation mission and maintenance of the decontaminated sites of Malanville and Bohicon through the filling of monitoring sheets (general condition of the landfarm, rainfall and temperature</li> </ul>	<ul style="list-style-type: none"> <li>- Assessment of three decontaminated sites:                             <ol style="list-style-type: none"> <li><b>1. Bohicon site:</b> lindane analysis result (25µg/kg) less than 244µg/kg at the time of decontamination operations, low biodegradation of the lindane molecule. Lindane is a POP whose biodegradation is difficult and slow, hence the strengthening of the landfarm by covering the soil with biodegradable straw from vetiver plants.</li> <li><b>2. Malanville site:</b> the acephate molecule is absent in the samples analyzed by LCSSA.</li> </ol> </li> </ul>	<ul style="list-style-type: none"> <li>- Excavation operation of <b>21,503 tonnes</b> of dieldrin and aldrin sludge and contaminated earth at the dump of the polluted site of Djassin</li> <li>- Ongoing update of the work plan for the sanitation of the Djassin site</li> </ul>	100%		

				<p>biodegradation of POP contaminants</p> <ul style="list-style-type: none"> <li>- Evaluation of the decontaminated site of Oganla: the results of the analyzes showed a total biodegradation (disappearance) of Parathion-methyl by landfarm. On the other hand, these analyzes detected the presence of DDT (0.123g/kg), DDD (0.015g/kg) and DDE (4.448 mg/kg) which are POPs. To this end, it has been recommended by the international consultant on decontamination of polluted sites to continue the monitoring and maintenance of the landfarm in order to allow the biodegradation of the POP molecules found at ground level.</li> </ul>	<p>survey, plant and animal biodiversity, new measures taken) and the taking of soil samples at 20 cm depth for laboratory analysis to assess the decrease in the level of pesticide residues in the soil</p> <ul style="list-style-type: none"> <li>- The results of the orthène soil samples taken during the decontamination operations at the Malanville site confirmed the absence of the acephate molecule. Therefore the international consultant recommended to stop the maintenance and the follow-up of the landfarm</li> </ul>	<p>Consequently, there was no contamination at this particular site because the bags of orthene were buried at this site. As a result, monitoring of the landfarm installed for remediation is stopped.</p> <p><b>3. Oganla site:</b> soil analysis result showed the amount of DDT (34,93 mg/kg) which is lower (0,123 g/ kg) than that found in the soil sample taken during the 1<sup>st</sup> monitoring-evaluation carried out in 2016. Note a decrease in the concentration of the DDT (POP) molecule whose biodegradation is very difficult and slow. The international consultant therefore recommended strengthening the landfarm by covering the soil with biodegradable straw from vetiver plants.</p>			
<b>Component 2 - Development and implementation of empty pesticides containers management system</b>									
<b>Output 2.1</b> Design and validation of a	Sept 16 Oct 18 for	5% National Project Coordination (NPC) and	10% - draft national strategy for the management of	80% - Mission of the international consultant	100% - Validation by the International Consultant in empty	-	-	100%	

management scheme for empty pesticide containers completed	national strategy	national consultant trained in Lyon (12-16 Oct 2015) to develop the strategy. Strategy for empty container management drafted Dec 2015.	empty packaging of pesticides (Report of Development of a strategy for management of empty packaging of pesticides in Benin of the national consultant in management of pesticide packaging (December 2015). - Approximately 200,235 empty pesticide containers in state and private structures, including the 30,000 empty containers inventoried in state structures in 2012, are to be secured for processing/ recycling.	specialized in empty pesticide packaging management in Benin from March 13 to 24, 2017, which aims to carry out a study on the implementation of a pilot plan for the management of empty pesticide packaging in the departments of the country. Borgou and Alibori - Sensitization of project stakeholders involved in the rational management of empty pesticide packaging. - Sensitization of cotton producers through the CEP on triple rinsing technique, drilling to make them unusable and collection of empty pesticide packaging. - At the end of the mission, a work plan for 2018 and 2019 for the implementation of the pilot plan for the management of empty pesticide	pesticide packaging management of the empty pesticide packaging management plan in the departments of Borgou and Alibori  - Validation by the International Consultant of the strategy of treatment and recycling of empty pesticide packaging by the NGO Bethesda				
--	-------------------	---	---	---	--	--	--	--	--

				packaging in the departments of Borgou and Alibori was prepared by the international consultant					
<b>Output 2.2</b> The empty pesticide container management scheme piloted in Alibori and Borgou Departments	Oct 18 – farmer training Apr 19 - Scheme set up and running Dec 19 - evaluation	5% Workshop to develop training curriculum for Farmer Field Schools planned for August 2016	10% awareness-raising of producers on the rational management of empty packaging of pesticides at the level of the FFS crops vegetable and cotton by the master trainers during the Facilitator Training (as part of Component 4).	15% - Preparation of LoA between FAO and the Social Engineering and Environment Company (CISE)/NGO Bethesda for the treatment and recycling of empty pesticide packaging in the departments of Borgou and Alibori - Development and validation of the LoA technical annex by the project technical team - Ongoing finalization of LoA between FAO and CISE/NGO Bethesda	25% - Training and sensitization of the 2018 FFS cotton-maize facilitators on the technique of triple rinsing and management of empty pesticide packaging - Production of a poster on empty pesticide packaging to raise awareness among producers on the management of empty pesticide packaging at the level of the thirteen (13) FFS installed in 2018 in the departments of Borgou and Alibori  - Training and sensitization of CEP producers on the dangers related to the use of chemical pesticides and the management of empty pesticide packaging (triple rinsing)  - Training and	35% - A total of 5,465 EPP were collected in the departments of Borgou and Alibori - Benin did not have a management plan for empty pesticide packaging in the regulatory texts on the management of pesticides. The project decided and retained to implement a pilot plan for the management of empty pesticide packaging, which is the first step in reducing the risks of health and environmental pollution. These packaging are reused by farming communities living in cotton growing areas, giving them a second life cycle. The pilot plan is a demonstration of the management plan on a reduced scale with 200 producers and is installed only in two departments of North Benin which is found in the cotton basin. Following the results	5% - Analysis of waste water from the treatment and recycling of empty pesticide packaging  - Results of the analyzes: the results of the analyzes of the waste water revealed the presence of the following chemical substances: Acetamiprid (0.18 µg/L), Cypermethrin (0.27 µg/L), Chlorpyrifos (0.45 µg/L), Emamectin Benzoate (0.12 µg/L), Lead (0.72 mg/L) and Cadmium (0.48 mg/L)  - <b>Comments from the international consultant in the management of Empty Pesticide Packaging (EVP):</b> Based on Law No. 98-030 of February 12, 1999 on the framework law on the environment and Decree No. 2001-109 of April 4 2001 setting wastewater quality standards in the Republic of Benin, it	95%	

					<p>sensitization of producers of different categories of farm typology on triple rinsing and management of empty pesticide packaging</p> <ul style="list-style-type: none"> <li>- Identification of collection and regrouping points by village and department of empty pesticide packaging</li> <li>- Signing and execution of LoA activities between FAO and the Bethesda NGO for the treatment /recycling of empty pesticide packaging in the Borgou and Alibori departments: Start up and continuation of the redevelopment work and upgrading to health standards/safety/environment of processing and recycling center for empty pesticide packaging</li> <li>- Visit to the Bethesda NGO treatment and recycling center to</li> </ul>	<p>obtained from the pilot plan, a national sustainable management plan for empty packaging was drawn up for the national management of empty pesticide packaging, which is now the responsibility of the Plant Protection Service of the Production Department. Plant of the Ministry of Agriculture, Livestock and Fisheries by decree N°097/MAEP/DC/SGM/DPV/CJ/SA/091SGG18 du 18 décembre 2018 fixant les modalités de gestion des emballages vides de pesticides et de biopesticides ainsi que les modalités de répartition des frais y afférents.</p> <ul style="list-style-type: none"> <li>- Shredding of EPP resulted in a weight of 252 kg</li> <li>- Treatment and recycling of EPP into finished products for non-food use: manufacture of brick pavers and flower pots by liquefying granules mixed with very fine sand:</li> <li>- Number of plastic pavers produced: 62</li> </ul>	<p>should be possible to discharge contaminated wastewater in small quantities. However, this procedure is not recommended. It is more environmentally friendly to evaporate waste water by exposing it to the sun, and to dispose of residues with obsolete pesticide stocks or, failing that, to store residues in a hazardous waste landfill for their future elimination.</p> <ul style="list-style-type: none"> <li>- Preparation of the final report being validated by the international consultant on LoA activities between FOA and NGO Bethesda for the treatment/recycling of empty pesticide packaging</li> </ul>

							design and implementation of similar projects.		
<b>Output 5.3:</b> Project “best-practices” and “lessons-learned” disseminated via publications and other means to be identified in the communication strategy.		Inception Workshop – coverage Media promotion of inventory: articles in Le Matinal, La Fraternité et Le Quotidien (16/9/15)	Publication in the newspaper "The Nation" of calls for candidates for the recruitment of national project consultants Training of facilitators and associated FFS vegetable crops: publication of an article in the newspaper "The Nation" and on the FAO online site, interview of the Project Coordinator in the newspaper "La nouvelle Tribune"	Completion of a poster on empty pesticide packaging	- Publication of an article on the decontamination of the polluted site of Bohicon and the cotton-maize CEPs in the quarterly newsletter of the FAO Representation in Benin/July-September 2018 - Kandi and Banikoara (Alibori Department) broadcast radio messages about triple rinsing and empty pesticide packaging management - draft of project factsheet - poster on management of empty pesticide containers for farmers	Delivery of a summary case study: "Promotion of alternatives to synthetic chemical pesticides: neem oil and food spray- a combination for the sustainable production of cotton in Benin"	-	100%	

#### 4. Information on Progress, Outcomes and Challenges on Project Implementation

Please briefly summarize main progress achieving the outcomes (cumulative) and outputs (during this fiscal year):
<p><b>C1:</b> 1<sup>st</sup> export of six (06) containers of obsolete pesticide waste for a total quantity of <b>71,57 tonnes</b> achieved in March 2021. Five (05) other containers of <b>57,267 tonnes of PO waste</b> are already ready for export. Completing the excavation operation for <b>21,503 tonnes</b> of dieldrin and aldrin sludge and contaminated soil from the polluted Djassin site.</p> <p><b>C2:</b> Recommendations for treatment of wastewater from recycling of Empty Pesticide Packaging (EVP) formulated. This was the remaining aspect element under component 2.</p> <p><b>C5:</b> A final evaluation of the project was conducted leading to a final project report with conclusions and recommendations.</p>
What are the major challenges the project has experienced during this reporting period?
<ul style="list-style-type: none"> <li>- The original shipping route chosen by the disposal company (Veolia) has undergone a change. As a result, the ship must now pass through Togo, which is not on the list of transit countries in the Basel notification granted to Veolia. Consequently, no waste export can be carried out before June 30, 2021, date of the end of the 1<sup>st</sup> notification. A new request for 2<sup>nd</sup> Basel notification had to be launched with Togo as the transit country. This 2<sup>nd</sup> notification covers the period from May 15, 2021 to January 01, 2022 and will allow the export of the rest of the obsolete pesticides.</li> <li>- The Covid 19 pandemic has caused a considerable delay in the recruitment of Veolia, an international company specializing in the securing and disposal of obsolete pesticides but also in the manufacture and import of materials and equipment for safeguarding the waste. It is also the basis for the total closure of airports, thus causing a significant delay for Veolia's trip to Benin for the practical phase of operations to secure obsolete pesticides.</li> </ul>

### Development Objective (DO) Ratings, Implementation Progress (IP) Ratings and Overall Assessment

Please note that the overall DO and IP ratings should be substantiated by evidence and progress reported in the Section 2 and Section 3 of the PIR.

For DO, the ratings and comments should reflect the overall progress of project results.

	<b>FY2021 Development Objective rating<sup>16</sup></b>	<b>FY2021 Implementation Progress rating<sup>17</sup></b>	<b>Comments/reasons<sup>18</sup> justifying the ratings for FY2021 and any changes (positive or negative) in the ratings since the previous reporting period</b>
<b>Project Manager / Coordinator</b>	Satisfactory	Satisfactory	The activities of components 2, 3 and 4 are finalized. The activities of component 1, in particular the securing and disposal of obsolete pesticides, has seen considerable progress through the securing of stocks of obsolete pesticides (167,714 tonnes) from all priority stores and the evacuation of 71,57 tonnes for disposal in Switzerland.
<b>Budget Holder</b>	Satisfactory	Satisfactory	The planning of the operation to secure and eliminate obsolete pesticides has not been respected for various reasons including the Covid-19 pandemic. We hope that everything will be done so that this delicate operation will be executed before the end of the project.
<b>GEF Operational Focal Point</b>	Satisfactory	Satisfactory	Component 1 of the project, in particular the activities for securing and eliminating obsolete pesticides, are normally carried out with a first export of obsolete pesticide waste for incineration in Switzerland. The schedule for carrying out these activities was disrupted by the COVID-19 pandemic, which caused considerable delays in the implementation of said activities. Activities to secure and dispose of obsolete pesticides are continuing and should be finalized before the end of the project scheduled for September 30, 2021. In view of the level of execution of activities for securing and eliminating obsolete pesticides, the main objective of the project, the project is deemed satisfactory.

<sup>16</sup> **Development/Global Environment Objectives Rating** – Assess how well the project is meeting its development objective/s or the global environment objective/s it set out to meet.

For more information on ratings, definitions please refer to Annex 1.

<sup>17</sup> **Implementation Progress Rating** – Assess the progress of project implementation. For more information on ratings definitions please refer to Annex 1.

<sup>18</sup> Please ensure that the ratings are based on evidence

<b>Lead Technical Officer<sup>19</sup></b>	Satisfactory	Satisfactory	<p>The project has advanced satisfactorily and in its final year of implementation. Disposal activities are at the final stage of completion through the contract with the waste management company recruited by FAO. The project surpassed its targets regarding the development and implementation of remediation strategies and quantification of Risks from 2 highly contaminated sites. Stakeholders are fully engaged regarding all components of the project.</p> <p>While the project is expected to achieve its objectives, the current situation with the COVID-19 pandemic caused delays in implementation. The project was extended until end of September 2021 to ensure project activities are completed and outcomes are achieved.</p>
<b>FAO-GEF Funding Liaison Officer</b>	Satisfactory	Satisfactory	The project has delivered on most of the key results. The disposal operations will likely be completed within the remaining months.

---

<sup>19</sup> The LTO will consult the HQ technical officer and all other supporting technical Units.

## 5. Environmental and Social Safeguards (ESS)

### Under the responsibility of the LTO (PMU to draft)

This section of the PIR describes the progress made towards complying with the approved ESM plan, when appropriate. Note that only projects with **moderate** or **high** Environmental and Social Risk, approved from June 2015 should have submitted an ESM plan/table at CEO endorsement. This does not apply to **low** risk projects. Please add recommendations to improve the implementation of the ESM plan, when needed.

Social & Environmental Risk Impacts identified at CEO Endorsement	Expected mitigation measures	Actions taken during this FY	Remaining measures to be taken	Responsibility
<b>ESS 1: Natural Resource Management</b>				
	NA			
<b>ESS 2: Biodiversity, Ecosystems and Natural Habitats</b>				
	NA			
<b>ESS 3: Plant Genetic Resources for Food and Agriculture</b>				
	NA			
<b>ESS 4: Animal - Livestock and Aquatic - Genetic Resources for Food and Agriculture</b>				
	NA			
<b>ESS 5: Pest and Pesticide Management</b>				
	See risk mitigation plan below.			
<b>ESS 6: Involuntary Resettlement and Displacement</b>				
	NA			
<b>ESS 7: Decent Work</b>				
	NA			
<b>ESS 8: Gender Equality</b>				
	NA			
<b>ESS 9: Indigenous Peoples and Cultural Heritage</b>				
	NA			
<b>New ESS risks that have emerged during this FY</b>				
	NA			

In case the project did not include an ESM Plan at CEO endorsement stage, please indicate if the initial Environmental and Social Risk classification is still valid; if not, what is the new classification and explain.

Overall Project Risk classification (at project submission)	Please indicate if the Environmental and Social Risk classification is still valid <sup>20</sup> . If not, what is the new classification and explain.
Medium-High	Still valid.

<i>Please report if any grievance was received as per FAO and GEF ESS policies. If yes, please indicate how it is being/has been addressed.</i>
None.

## 6. Risks

### Risk ratings

RISK TABLE
<p><i>The following table summarizes risks identified in the <b>Project Document</b> and reflects also <b>any new risks</b> identified in the course of project implementation. Please make sure that the table also includes the Environmental and Social Management Risks captured by the Environmental and social Management Risk Mitigations plans. The <u>Notes</u> column should be used to provide additional details concerning manifestation of the risk in your specific project, <b>as relevant</b>.</i></p>

---

<sup>20</sup> **Important:** please note that if the Environmental and Social Risk classification is changing, the ESM Unit should be contacted and an updated Social and Environmental Management Plan addressing new risks should be prepared.

	Risk	Risk rating <sup>21</sup>	Mitigation Actions	Progress on mitigation actions <sup>22</sup>	Notes from the Project Task Force
<b>General project risks</b>					
1	Insufficient funds dedicated to the safeguarding of high-priority sites, and the disposal of POPs.	Low		Budget for safeguarding and disposal POPs and obsolete pesticides is available and funded by GEF. This activity is co-funded by CropLife	Budget available for more than 200 tonnes of obsolete pesticides and 2 sites remediated
2	Institutional arrangements pose challenges to project execution.	Low		Project focal points have been designated at the level of the Ministry of Agriculture and the Ministry of Health. These focal points are members of the Project Management Unit and participate in the realization of project activities.	All ministries (Health, Agriculture and Environment) have coordinated well during project implementation
3	Likelihood of political instability	Low		No political instability was observed during the implementation of the project	
4	Extreme weather conditions such as torrential rain and floods	Low to medium		Areas where stores containing obsolete pesticides and contaminated soil are located are not flood-prone areas	
<b>Component 1: Safe disposal of POPs and other obsolete pesticides and remediation of heavily contaminated sites</b>					

<sup>21</sup> GEF Risk ratings: Low, Moderate, Substantial or High

<sup>22</sup> If a risk mitigation plan had been presented as part of the Environmental and Social management Plan or in previous PIR please report here on progress or results of its implementation. For moderate and high risk projects, please Include a description of the ESMP monitoring activities undertaken in the relevant period".

	Risk	Risk rating <sup>21</sup>	Mitigation Actions	Progress on mitigation actions <sup>22</sup>	Notes from the Project Task Force
<b>General project risks</b>					
5	Environmental contamination from leakage of POPs and other obsolete pesticides due to poor conditions of containers	High	Management measures to be included in the EMP include field procedures to ensure no further leakage occurs during the project activities. Chemical stores will be ranked according to leakage risk at the beginning of the project, and will be safe-guarded as a matter of priority.	Mitigation measure implemented	The security measures are provided for in the EMP and the national team will ensure strict compliance by the international company
6	Continued government centralised procurement of pesticides through parastatal companies will give rise to re-accumulation of obsolete stocks	High	As part of component 3, government stakeholders will be engaged to develop pesticide policies that are more responsive to user demands and avoid large-scale procurements	The Government has realized the danger of obsolete pesticides.  Thus, any import of pesticides is subject to a prior import authorization and takes into account the remaining stock of pesticides  In addition, the control of pesticides for the cotton season takes into account the residual stock of pesticides of the previous season	
7	Lack of appropriate storage for safeguarded stocks	Medium		Following the liquidation of SONAPRA, the project could not benefit from the SONAPRA department store as an intermediate/final storage center (CSI/F) for secure pesticide stocks because this store currently contains inputs. Nevertheless, the SONAPRA Court has been selected as the CSI/F platform for secure obsolete pesticide stocks	Relevant stores identified in EMP for centralisation of stocks

	Risk	Risk rating <sup>21</sup>	Mitigation Actions	Progress on mitigation actions <sup>22</sup>	Notes from the Project Task Force
<b>General project risks</b>					
8	Incidents during safeguarding	High	All staff /enterprise of the project engaged in safeguarding operations will have been trained and will be provided with protection gear by the international contractor. Strict application of measures included in Environmental Management Plan (EMP) and Health and Safety Plans.	Personal protective equipment specification available. Health and safety plans in EMP available for minimising incidents and worker exposure	Safety measures for each obsolete pesticide safety operation are provided for in the EMP and the Health and Safety Environment Plan. The national team will ensure strict compliance with these measures by the international company
9	Delays in the procurement of equipment necessary for the disposal	Low		The acquisition of equipment is subject to the recruitment of the international company by FAO-Rome and the length of the procurement procedures	
10	Government authorities disagree with the strategy for the reduction of risks posed by contaminated sites	Medium		The Specific Environmental Management Plans (EMP) of the contaminated sites were cleared by the Benin Environmental Agency (ABE) before the implementation of site remediation operations.	All EMP (obsolete pesticides and contaminated sites) have been cleared by the ABE
11	Delays in administrative procedures/decisions as regards transport of obsolete stocks	Medium		The preparation of notification documents for transit countries and the processing of these documents in accordance with the procedures in force at the national level lasts 2 to 3 months	
<b>Component 2: Development and implementation of empty pesticides containers management system</b>					

	Risk	Risk rating <sup>21</sup>	Mitigation Actions	Progress on mitigation actions <sup>22</sup>	Notes from the Project Task Force
<b>General project risks</b>					
12	Technical staff being exposed to pesticides during collection and repacking of empty containers	Low to medium		Training on triple rinsing undertaken and treatment of containers by Bethesda (NGO) planned to minimise exposure	Training and awareness sessions on triple rinsing and rational management of empty pesticide packaging to facilitators of FFS, producers and agricultural communities.
13	Lack of stakeholder involvement in proper disposal of empty containers and in the establishment of a sustainable system for the management of wastes.	Low		In addition to the FFS producers from the villages of the Borgou and Alibori departments, the project involved producers and actors of the national pesticide supply system for the implementation of the pilot plan for the management of empty pesticide packaging.	
<b>Component 3: Strengthening the regulatory framework and institutional capacity for the sound management of pesticides</b>					
14	Delayed adoption of updated legislation. Law making (including promulgation of regulations ) is a prerogative of the State and will depend on the will of the legislature or law-making authority to enact legislation	Medium		Decrees have been issued by the President of the Republic for better pesticide management	
<b>Component 4: Promotion of alternatives to POPs and other hazardous chemical pesticides</b>					
15	Low interest in adopting alternative technologies by producers	Low		The final evaluation of the FFS revealed that most of the CEP producers have tested and given positive feedback in using alternatives indicated as part of integrated pest management	

	Risk	Risk rating <sup>21</sup>	Mitigation Actions	Progress on mitigation actions <sup>22</sup>	Notes from the Project Task Force
<b>General project risks</b>					
16	Climate Change Changes in the climate will impact on pest distribution, activity, seasonal appearance, as well as impact on the behaviour of chemicals in the environment.	Medium		Integrated pest management methods were the subject of a training module during the animation of FFS	

**Project overall risk rating** (Low, Moderate, Substantial or High):

FY2020 rating	FY2021 rating	Comments/reason for the rating for FY2021 and any changes (positive or negative) in the rating since the previous reporting period
Low	Moderate	Although most of the activities are done, there is still a chance that the COVID-19 pandemic could still affect the final disposal operations – e.g. disposal team not being able to travel due to restrictions.

## 7. Adjustments to Project Strategy – Only for projects that had the Mid-term review (or supervision mission)

If the project had a MTR review or a supervision mission, please report on how the MTR recommendations were implemented as indicated in the Management Response or in the supervision mission report.

MTR or supervision mission recommendations	Measures implemented
<p><b>Recommendation 1:</b> Develop and implement a communication strategy to improve visibility and inform the public about the efforts being made to solve a public health and environmental problem</p>	<p>A communication strategy implemented for the project on the promotion of effective alternatives and on the impact of empty pesticide packaging on human health and the environment in order to reduce the risks of toxicity linked to human health and the environment.</p> <p>During the implementation of the activities of the different components, awareness, education and information sessions were held with the partners and beneficiaries of the project during meetings, workshops and through communication channels such as posters, radios, newspapers, television, internet and good practices at Farmer Field School (FFS) level</p>
<p><b>Recommendation 2:</b> Hold regular weekly or at least monthly meetings of the Project Management Unit (PMU) to enable members to monitor project implementation and effectively facilitate and accelerate the implementation of activities</p>	<p>During the 1<sup>st</sup> meeting of the Project Management Unit (PMU), PMU members decided on a 4-month period to discuss the activities carried out and the annual work plans.</p> <p>However, actions such as reports of bimonthly activities carried out are made to members in order to ensure the effective implementation of the annual work plan approved by the PMU.</p>
<p><b>Recommendation 3:</b> Design and rapidly implement a monitoring and evaluation system to facilitate instant monitoring of the remaining activities' implementation.</p>	<p>An effective project monitoring and evaluation mechanism is set up at FAO-Benin to monitor activities carried out in the field for better achievement of project results. The evaluation makes it possible to assess the progress of the project, to see if the planned results are achieved and the direct effects targeted in the logical framework of the project and to promote the dissemination of the results.</p>
<p><b>Recommendation 4:</b> Speed up the implementation of activities that have been significantly delayed, in particular those related to the implementation of a system for empty pesticide container management.</p>	<p>A system of collection, triple rinsing, safe storage and recycling of empty pesticide packaging in areas of large cotton production (Borgou and Alibori departments) has been set up and is being consolidated through the sensitization of cotton and maize producers and training on the triple rinsing of empty pesticide packaging to reduce the risks of human and environmental toxicity associated with the use of these packaging.</p> <p>A memorandum of understanding was signed with the NGO Bethesda to set up the pilot plan for managing Empty Pesticide Packaging (EVP) through a mechanism for collecting, storing and processing/recycling EVP. The implementation of this memorandum of understanding made it possible to recover through the pilot plan 5,465 EVP from the departments of Borgou and Alibori which were treated and recycled into finished products such as paving stones, bricks and flower pots.</p>

<p><b>Recommendation 5:</b> Simplify procedures and avoid delays in the approval of pre-requisite documents submitted to the FAO Pesticide Risk Reduction Group and the Benin Environmental Agency (ABE).</p>	<p>Better-structured system of accountability for the activities of the various project components to reduce the delay in processing reports and other project documents was put in place.</p> <p>Documents were submitted for validation to the ABE as soon as possible in order to reduce the time taken to review documents for validation.</p>
<p><b>Recommendation 6:</b> Involve women more in the implementation of project activities, particularly in Farmer Field Schools.</p>	<p>The installation of cotton-maize FFS saw an increase in terms of women's involvement, i.e. 38.46% compared to the market gardening FFS which had only two (02) women among the 10 facilitators (20%) i.e. an increase of 18.46% at the level of the facilitators responsible for the animation of the FFS The involvement of women in the FFS increased from 4% in the market gardening FFS to 20% in the cotton-maize FFS, i.e. an increase of 16%</p>
<p><b>Recommendation 7:</b> Design an exit strategy involving key partners to ensure the continuation of activities and the sustainability of achievements after the end of the project.</p>	<p>Full involvement of the Plant Protection Service (SPV), the State structure responsible for the management of pesticides belonging to the Plant Production Directorate (DPV)/MAEP, which houses the coordination of the project. The targeted strategy will focus on raising awareness and strengthening the regulatory framework and institutional, technical and material capacities and policy makers to better manage pesticides and prevent future accumulations of obsolete pesticides. The sustainability of the achievements obtained by the project must be integrated into the activities of the Plant Protection Service to improve the national pesticide management system.</p> <p>The SPV will rely at the field level on the decentralized structures of the MAEP that are the Departmental Directorate of Agriculture, Livestock and Fisheries (DDAEP) and the Territorial Agricultural Development Agency (ATDA).</p>

#### Adjustments to the project strategy.

Please note that changes to outputs, baselines, indicators or targets cannot be made without official approval from PSC and PTF members, including the FLO. These changes will follow the recommendations of the MTR or the supervision mission.

Change Made to	Yes/No	Describe the Change and Reason for Change
Project Outputs	No	
Project Indicators/Targets	No	

**Adjustments to Project Time Frame**

If the duration of the project, the project work schedule, or the timing of any key events such as project start up, mid-term review, final evaluation or closing date, have been adjusted since project approval, please explain the changes and the reasons for these changes. The Budget Holder may decide, in consultation with the PTF, to request the adjustment of the EOD-NTE in FPMIS to the actual start of operations providing a sound justification.

Change	Describe the Change and Reason for Change
<p><b>Project extension</b></p>	<p>Original NTE: 21/03/2021                      Revised NTE: 30/09/2021</p> <p>Justification:                      The Covid 19 pandemic caused the total closure of airports causing a significant delay for Veolia's (disposal company) trip to Benin for the practical phase of operations to secure and remove obsolete pesticides. It also caused a considerable delay in the manufacture and import of materials and equipment for securing obsolete pesticides.</p> <p>In view of the above, the project was extended to 30 September 2021.</p>

## 8. Stakeholders Engagement

List of stakeholders	Category	Engagement mechanism
Direction de la Production Végétale/ Ministère de l'Agriculture, de l'Élevage et de la Pêche (MAEP)	Government	The MAEP is the executing agency of the project through the Directorate of Plant Production, which houses the project
Direction de la Qualité, des Innovations et de la Formation Entrepreneuriale (DQIFE)/MAEP	Government	The DQIFE is involved at the level of component 4 of the project notably in the activities of FFS for the promotion of alternatives to POPs and extremely dangerous chemical pesticides
Agence Béninoise de la Sécurité Sanitaire des Aliments (ABSSA)/MAEP	Government	The Benin Food Safety Agency is involved at the project level through the Central Food Safety Control Laboratory for the analysis of soil samples contaminated with pesticides
Direction Générale de l'Environnement et du Climat (DGEC)/Ministère du Cadre de Vie et du Développement Durable	Government	The Directorate General for Environment and Climate through the project focal point participates in the execution of the activities and the management of the project. The Bâle Convention will support the project in the administrative procedures for the transport of obsolete POPs and pesticides for disposal abroad
Agence Béninoise pour l'Environnement (ABE)/Ministère du Cadre de Vie et du Développement Durable	Government	The Benin Environmental Agency (ABE) will participate in the implementation of the safeguarding and disposal of obsolete POPs and other pesticides and the remediation of heavily contaminated sites.
Direction Nationale de la Santé Publique/Ministère de la Santé	Government	The National Directorate of Public Health through the project's focal point participates in the execution of the activities and the management of the project.
Institut National des Recherches Agricoles du Bénin (INRAB)/MAEP	Government	INRAB intervenes mainly at the project level in the collection of typology data and basic surveys, monitoring and evaluation at the level of farmer's fields school. It will also support the project at the pre-registration level of biopesticides tested by IITA at the farmer field fields for registration
Direction Départementale de l'Agriculture, de l'Élevage et de la Pêche (DDAEP)	Government	The DDAEPs of contaminated departments and depots /stores of POP stocks and obsolete pesticides are involved through their phytosanitary surveillance structure during the execution of the activities related to the investigation of contaminated sites and to the operations of census of deposits/stores stocks of POPs and obsolete pesticides. They are also involved in the decontamination of polluted sites and the safeguarding and disposal of obsolete pesticides. DDAEP Borgou and Alibori are strongly involved in the management of empty pesticide packaging (component 2) and the promotion of alternatives to POPs and extremely

		dangerous chemical pesticides (component 4) DDAEP Zou and Alibori are involved in the decontamination of polluted sites of Bohicon and Malanville
Agence Territoriale de Développement Agricole (ATDA)/MAEP	Government	The ATDA are involved at the level of component 4 of the project notably in the activities of FFS for the promotion of alternatives to POP and extremely dangerous chemical pesticides
Organisation Béninoise pour la Promotion de l'Agriculture Biologique (OBEPAB)	NGO	OBEPAB participates in the project activities by encouraging alternatives for pest control based on their experience, impact monitoring, awareness, education and communication strategies in cotton producing areas.
Institut International d'Agriculture Tropicale (IITA)	International Institute	IITA supports the project in promoting tried and tested alternatives at the farmer field fields to reduce the dependence of cotton and market gardening producers on highly dangerous synthetic chemical pesticides
Communautés agricoles	Farmer Organization	Agricultural communities are the key participants in the project and engaged through the communication strategy, their active participation at the level of farmers' fields and typological studies on alternatives aimed at reducing the use of synthetic chemical pesticides.
NGO Bethesda	NGO	Bethesda is involved in component 4 of the project through an LoA signed with the FAO for the collection, grouping, transport, treatment and recycling of empty pesticide packaging in the departments of Borgou and Alibori

## 9. Gender Mainstreaming

### Information on Progress on gender-responsive measures as documented at CEO Endorsement/Approval in the gender action plan or equivalent (when applicable)

The national project coordinator is a woman and she encourages participating women on steering committees (Project Steering Committee and Project Management Unit) and key stakeholder events. Emphasis is also placed on the participation of rural women in awareness-raising and education meetings on exposures related to the risks associated with contamination at contaminated sites and pesticides and through the re-use of empty packaging of pesticides.

By removing and addressing sources of POPs contamination in communities, the project will help reduce the exposure of women, children and other vulnerable groups. Partnerships with civil society (for example, the NGO that already removes containers from the use of public health from traffic) explicitly target women in their advocacy and communication efforts.

Regarding the participation of women in the Farmer Field Schools (FFS), 46 women took part in the activities in the 10 FFS market gardening of 1<sup>st</sup> and 2<sup>nd</sup> years and 37 women in the 13 FFS cotton-maize of 1<sup>st</sup> and 2<sup>nd</sup> year.

As part of the implementation of the pilot plan for the management of empty pesticide packaging in the departments of Borgou and Alibori, 200 producers including two (02) groups of 22 women were trained and sensitized on triple rinsing and the management of empty pesticide packaging in the departments of Borgou and Alibori.

## 10. Knowledge Management Activities

### Knowledge activities / products (when applicable), as outlined in knowledge management approved at CEO Endorsement / Approval

Safeguarding, disposal POPs and obsolete pesticides and cleaning up heavily contaminated sites help protect human health and the environment by reducing the risk of toxicity due to contamination of soil and water. Similarly, the project carried out the collection, treatment and recycling of empty pesticide packaging in the departments of Borgou and Alibori to prevent the reuse of empty pesticide packaging which poses risks of toxicity to human health and the environment.

The project developed a communication strategy on the impact of empty pesticide packaging and the promotion of alternatives to conventional chemical pesticides. The implementation of this plan has included the following:

5 radio spots on risks of pesticides and risk reduction measures

1 manual on inspection of pesticides

3 curricula on farming and integrated pest management for cotton, maize and vegetables

1 poster on management of empty pesticide containers management for farmers

1 brochure on biopesticide (in progress)

1 A success story from the project on the IPM FFS was delivered The case study summary sent is titled "Promotion of alternatives to synthetic chemical pesticides: neem oil and food spray- a combination for the sustainable production of cotton in Benin"

1 publication on the FAO-Benin website of an article on the training of phytosanitary inspectors on the pesticide inspection and control manual.

<http://www.fao.org/benin/actualites/detail-events/fr/c/1207578/>

1 project factsheet (under development)

## 11. Indigenous Peoples Involvement

### Are Indigenous Peoples involved in the project? How? Please briefly explain.

The agricultural populations, in particular the cotton producers who are bariba, dendi, and other ethnic groups of the Benin cotton basin, are the key participants at the same time as the beneficiaries, through the reduction of exposure to pesticides, and will be engaged through the communication strategy, FFS and typological studies concerning alternatives. Women and children of agricultural producers benefit from reduced pesticide exposure, through improved management of pests and pesticides and awareness of the risks posed by pesticides. In particular, cotton producers have used proven biopesticides as less harmful alternatives for integrated cotton pest management to reduce the use of hazardous chemical pesticides. Market gardeners (bariba, dendi and djerma) in the department of Malanville also participated in FFS activities to promote alternatives to conventional chemical pesticides. Urban and rural Yoruba, gon, fon, nago populations living near remediated contaminated sites and decontaminated pesticide stores are less exposed to health and environmental risks.

## 12. Innovative Approaches

**Please provide a brief description of an innovative<sup>23</sup> approach in the project / programme, describe the type (e.g. technological, financial, institutional, policy, business model) and explain why it stands out as an innovation.**

- The project through component 4 "Promotion of alternatives to POPs and other dangerous chemical pesticides" introduced integrated pest management (IPM) in Borgou and Alibori from 2016 to 2019 through running farmer field schools for 400 vegetable (tomato, onion) and cotton-maize producers (total). In the frame of IPM a number of less toxic/non toxic alternatives to pesticides like the aqueous extract of Neem and the aqueous extract of Hyptis suaveolens, as well as the combination of food extracts were thought to use by farmer, including the ecological management of their fields including for the new fall armyworm on maize and for cotton pests against which business as usual includes calendar treatment with conventional pesticides. These were integrated with the production of healthy plants – including rotation and organic matter – that are not innovations per se but they are social innovations for the country. The whole component has therefore brought technical and social innovations in the context of Benin, including protecting farmers from risks of pesticides.
- Through component 2 "Pilot container management" a pilot has recycled empty pesticide containers into bricks which is one of the few examples of successful recycling model of pesticide waste in Benin.
- Through component 3 Technical improvement at the level of phytosanitary inspectors for the control and inspection of pesticides. It then became clear that most phytosanitary inspectors at the national level have received notions and are edified about the inspection and sampling of pesticides during controls. The two (02) official entry points for pesticides (Port and airport) were equipped with materials and equipment for the collection, collection, handling and conservation of pesticides. All of this allowed for better organization, planning and execution in terms of inspection, control and management of pesticides.

---

<sup>23</sup> Innovation is defined as *doing something new or different in a specific context that adds value*

### 13. Possible impact of the Covid-19 pandemic on the project

**Please indicate any implication of the Covid-19 pandemic on the activities and progress of the project. Highlight the adaptative measures taken to continue with the project implementation.**

The Covid 19 pandemic has caused a considerable delay in the recruitment of Veolia, an international company specializing in the securing and disposal of obsolete pesticides but also in the manufacture and import of materials and equipment for securing obsolete pesticides. It is also the basis for the total closure of airports, thus causing a significant delay for Veolia's trip to Benin for the practical phase of operations to secure obsolete pesticides.

## 14. Co-Financing Table

Sources of Co-financing	Name of Co-financer	Type of Co-financing	Amount Confirmed at CEO endorsement / approval	Actual Amount Materialized at 30 June 2021	Actual Amount Materialized at Midterm <sup>24</sup> or closure	Expected total disbursement by the end of the project
Government	Ministry of Agriculture (ABSSA)	In-kind	300,000	281,250		300,000
Government	Ministry of Agriculture (ABSSA)	Grant	4,250,000	3,984,375		4,250,000
Government	Ministry of Agriculture (DAGRI)	In-kind	500,000	468,750		500,000
Private Sector	CropLife International	Grant	868,500	568,500		868,500
Private Sector	CropLife International	In-kind	60,000	56,250		60,000
Civil society	OBEPAB	Grant	500,000	468,750		500,000
Civil society	OBEPAB	In-kind	500,000	468,750		500,000
Research Institute	IITA	Grant	300,000	281,250		300,000
GEF Agency	FAO	Grant	3,152,125	2,955,118		3,152,125
GEF Agency	FAO	In-kind	150,000	140,625		150,000
		<b>TOTAL</b>	<b>10,580,625</b>	<b>9,673,618</b>		<b>10,580,625</b>

<sup>24</sup> This was not confirmed by the evaluation team even though the project team provided information.

Please explain any significant changes in project co-financing since Project Document signature, or differences between the anticipated and actual rates of disbursement

## Annex 1. – GEF Performance Ratings Definitions

**Development/Global Environment Objectives Rating** – Assess how well the project is meeting its development objective/s or the global environment objective/s it set out to meet. **DO Ratings definitions:** **Highly Satisfactory (HS)** - Project is expected to achieve or exceed **all** its major global environmental objectives, and yield substantial global environmental benefits, without major shortcomings. The project can be presented as “good practice”); **Satisfactory (S)** - Project is expected to achieve **most** of its major global environmental objectives, and yield satisfactory global environmental benefits, with only minor shortcomings); **Moderately Satisfactory (MS)** - Project is expected to achieve **most** of its major relevant objectives but with either significant shortcomings or modest overall relevance. Project is expected not to achieve **some** of its major global environmental objectives or yield some of the expected global environment benefits); **Moderately Unsatisfactory (MU)** - Project is expected to achieve of its major global environmental objectives with major shortcomings or is expected to achieve only **some** of its major global environmental objectives); **Unsatisfactory (U)** - Project is expected **not** to achieve **most** of its major global environment objectives or to yield any satisfactory global environmental benefits); **Highly Unsatisfactory (HU)** - The project has failed to achieve, and is not expected to achieve, **any** of its major global environment objectives with no worthwhile benefits.)

**Implementation Progress Rating** – Assess the progress of project implementation. **IP Ratings definitions:** **Highly Satisfactory (HS):** Implementation of all components is in substantial compliance with the original/formally revised implementation plan for the project. The project can be resented as “good practice”. **Satisfactory (S):** Implementation of most components is in substantial compliance with the original/formally revised plan except for only a few that are subject to remedial action. **Moderately Satisfactory (MS):** Implementation of some components is in substantial compliance with the original/formally revised plan with some components requiring remedial action. **Moderately Unsatisfactory (MU):** Implementation of some components is not in substantial compliance with the original/formally revised plan with most components requiring remedial action. **Unsatisfactory (U):** Implementation of most components is not in substantial compliance with the original/formally revised plan. **Highly Unsatisfactory (HU):** Implementation of none of the components is in substantial compliance with the original/formally revised plan.
