### **Milestone Dates:**

GEF CEO Endorsement Date:	24 September 2014
Project Implementation Start	1 March 2015
Date/EOD:	
Proposed Project	28 February 2019
Implementation End Date/NTE¹:	
Revised project implementation	28 February 2022
end date (if applicable) <sup>2</sup>	
Actual Implementation End	
Date <sup>3</sup> :	

### **Funding**

GEF Grant Amount (USD):	1,710,000 USD
Total Co-financing amount as	9,307,374 USD
included in GEF CEO	
Endorsement Request/ProDoc4:	
Total GEF grant disbursement as	1,257,759 USD
of June 30, 2021 (USD m):	

<sup>&</sup>lt;sup>1</sup> As per FPMIS

<sup>&</sup>lt;sup>2</sup> In case of a project extension.

<sup>&</sup>lt;sup>3</sup> Actual date at which project implementation ends - only for projects that have ended.

<sup>&</sup>lt;sup>4</sup> This is the total amount of co-financing as included in the CEO document/Project Document.

Total estimated co-financing	8,362,660 USD
materialized as of June 30, 2021 <sup>5</sup>	

#### **Review and Evaluation**

Date of Most Recent Project	29 November 2019
<b>Steering Committee Meeting:</b>	
<b>Expected Mid-term Review</b>	Already done
date <sup>6</sup> :	
Actual Mid-term review date:	November 2018
Mid-term review or evaluation	No
due in coming fiscal year (July	
2021 – June 2022) <sup>7</sup> :	
<b>Expected Terminal Evaluation</b>	
Date:	
Terminal evaluation due in	Yes
coming fiscal year (July 2021 –	
June 2022):	
Tracking tools/ Core indicators	No
required <sup>8</sup>	

#### **Ratings**

Overall rating of progress	Satisfactory
towards achieving objectives/	
outcomes (cumulative):	
Overall implementation	Satisfactory
progress rating:	
Overall risk rating:	Low

#### **Status**

Implementation Status	6 <sup>th</sup> PIR
(1 <sup>st</sup> PIR, 2 <sup>nd</sup> PIR, etc. Final PIR):	

<sup>&</sup>lt;sup>5</sup> Please see last section of this report where you are asked to provide updated co-financing estimates. Use the total from this Section and insert here.

 $<sup>^{\</sup>rm 6}$  The MTR should take place about halfpoint between EOD and NTE – this is the expected date

<sup>&</sup>lt;sup>7</sup> Please note that the FAO GEF Coordination Unit should be contacted six months prior to the expected MTR date

<sup>&</sup>lt;sup>8</sup> Please note that the Tracking Tools are required at mid-term and closure for all GEF-4 and GEF-5 projects. Tracking tools are not mandatory for Medium Sized projects = < 2M USD at mid-term, but only at project completion. The new GEF-7 results indicators (core and sub-indicators) will be applied to all projects and programs approved on or after July 1, 2018. Also projects and programs approved from July 1, 2014 to June 30, 2018 (GEF-6) must apply core indicators and sub-indicators at mid-term and/or completion

## **Project Contacts**

Contact	Name, Title, Division/Institution	E-mail
Project Manager / Coordinator	Alice NDIKONTAR	Alice.NdikontarSiben@fao.org
Lead Technical Officer	Oxana PERMINOVA	Oxana.perminova@fao.org
Budget Holder	Athman MRAVILI	Athman.Mravili@fao.org
GEF Funding Liaison Officer	Kuena MOREBOTSANE	Kuena.morebotsane@fao.org

### 2. Progress Towards Achieving Project Objectives and Outcome (DO)

(All inputs in this section should be cumulative from project start, not annual)

Project objective and Outcomes (as indicated at CEO Endorsement)	Description of indicator(s) <sup>9</sup>	Baseline level	Mid-term target <sup>10</sup>	End-of-project target	Level at 30 June 2021	Progress rating <sup>11</sup>
	luce POPs releases	from obsolete pes	ticide stockpiles and contamina	ited sites and streng	then the capacity for the sound	management
of pesticides.  Outcome 1:  Existing POPs and obsolete pesticide stocks disposed of in an environmentally sound manner and POPs pesticide contaminated sites remediated.	1a) Up to 100 tonnes of POPs and other obsolete pesticides disposed of by the end of year 2.	45 tonnes of obsolete pesticides and associated waste held in a central storage location in Edea.	45 tonnes disposed of in an environmentally sound manner.	Up to 55 additional tonnes of obsolete pesticides waste disposed of in an environmentally sound manner.	So far 35,711Kg of obsolete pesticides and associated waste have been disposed of in 2018;  An Environmental Assessment (EA)was conducted and an Environmental Management Plan (EMP) developed in view of safeguarding and disposal of 50.8 metric tons of obsolete pesticides and associated waste , inventoried in 2016 and 2018;	S

<sup>&</sup>lt;sup>9</sup> This is taken from the approved results framework of the project. Please add cells when required in order to use one cell for each indicator and one rating for each indicator.

<sup>10</sup> Some indicators may not identify mid-term targets at the design stage (refer to approved results framework) therefore this column should only be filled when relevant.

<sup>&</sup>lt;sup>11</sup> Use GEF Secretariat required six-point scale system: **Highly Satisfactory** (HS), **Satisfactory** (S), **Marginally Satisfactory** (MS), **Marginally Unsatisfactory** (MU), **Unsatisfactory** (U), and **Highly Unsatisfactory** (HU).

				Tender developed for Safeguarding and disposal of additional 50.8 tons of obsolete pesticides including Methyl Bromide and associated wastes, split into two groups: pesticides and methyl bromide. To be published in the UN procurement System.	
1b) Risk reduced at 2 highest risk sites by 50%	6 locations highlighted in FAO PSMS data for further detailed investigation.	Detailed site investigations completed at the 6 target contaminated sites resulting in prioritisation  Remediation strategy developed;	Pilot scale remediation of 2 highest risk sites completed and risk reduced by 50%.	Detailed investigations completed for two pesticide contaminated sites (Dschang and Lagdo) by Blacksmith institute/Pure Earth, at sites which were identified as potential high risks, in view of developing remediation strategy (report on detailed risk assessment available)	MU

	An Environmental Management Plan for the two sites finalised by Pure Earth NGO proposing options for the remediation of 2 sites contaminated by 4,4 DDD, Alpha and Beta Endo sulpha and Dieldrin (Dschang), and contaminated with remains of unidentified containers and residuals, debris and wastes (Lagdo).  The remediation strategy option of excavation of contaminated soil and exportation for destruction has not been possible as this involves a significant quantity of soil the cost of which cannot be covered by the limited budget available. There are no technically sound facilities available in the country to dispose of all pesticides contaminated soils.
--	---

Risks to the environment and human health from empty pesticide containers reduced through establishing and enhancing container management systems at national level.	2a) National Strategy/Pilot schemes designed for container management (output 2.1 indicator)	Container management schemes developed by CDC (banana, rubber, oil palm) in the south west region and SODECOTON (cotton) in the North;		National schemes for pesticide container management developed based on pilot scheme results.	A status report prepared by container management national consultant updating information on pesticides use in Cameroon (different types of pesticide importations, container types, estimated quantities of pesticides/containers imported into Cameroon, types of users (stakeholders)) in view of setting up pilot container management schemes.  Two pilot schemes have been designed for empty pesticides containers management.	S
	2b) % of containers entering the market for use are triple rinsed and 25% recycled at the end of their life in the pilot sites (Output 2.2.)  2 c) National pesticide container management	0	2 pilots under implementation	35% triple rinsed and 25% recycled.	Sensitization/communication strategy developed by the project in partnership with two local NGOs was implemented in two pilot sites (North and the Littoral regions) on the dangers linked to the re-use of empty pesticides containers.  791 producers (186 women and 605 men) were trained in the management of empty pesticide packaging, with an emphasis on triple rinsing of containers immediately after	S

strategy	use by the local
adopted by	cooperatives.
project year 4.	Implementation completed
(autaut 2.2)	of the two Schemes in the
(output 2.3)	
	pilot sites in the (North
	(Garoua) and Littoral
	(Loum)), through formal
	partnership with two
	cooperatives , CNPCC and
	COOPHOC respectively; A
	total of 2.7 tons(2.0T and
	0.7T) of empty pesticides
	containers collected from
	Loum and Garoua localities,
	respectively;
	The containers collected are
	stored at 2 localities pending
	disposal/recycling
	A national Strategy for the
	management of empty
	pesticide containers in
	Cameroon has been
	developed by the project
	and endorsed by multi-
	stakeholders;

Outcome 3:  Regulatory framework and institutional capacity strengthened for sound management of pesticides throughout their lifecycle	3a) Legislative texts and regulations covering the full pesticide life cycle and in compliance with Code submitted to Government.	Phytosanitary and environmental Legislation exist but not on Pesticide Management. CEMAC Regulation exists but is not implemented in practice	Legislation and registration for all pesticides in compliance with code drafted	Legislation submitted to Government for approval	The 2003 phytosanitary Law of Cameroon has been revised(draft), pending validation;	S
	3b) Number and quality of pesticide inspections conducted and quality control analyses conducted	Weak capacity for pesticide inspection and quality control.  Insufficient number of inspections (precise baseline to be determined)	Training plan for inspectors developed and its implementation initiated.	30% more quality inspection than at baseline.	An assessment of the National Phytosanitary Council for coordinating pesticide life cycle management and control was completed and membership of the council reviewed to 20 members; An action plan was approved for the Council during the first session;	HS
					Three sessions of National Phytosanitary Council have been held so far, with the last session held on the 25 November 2020.  An assessment and needs identification on phytosanitary inspection and information exchange on pesticide registration and	
					post registration control has been completed,	

recommendations included training needs for inspectors;  40 inspectors (10 women, 30 men) trained on pesticide inspections and post registration control.  An assessment of 04 laboratories for pesticide analyses (including governmental one) was completed identifying
inspectors;  40 inspectors (10 women, 30 men) trained on pesticide inspections and post registration control.  An assessment of 04 laboratories for pesticide analyses (including governmental one) was

training and equipment
needs;
The case
16 Laboratory staff ( 03
women, 13 men)) were
trained in pesticide residue
analysis and administrative
management/ business
planning;
14 Pesticides registrars staff
( 04 women, 10 men) trained
on the use of "FAO
Pesticides registration
toolkit" including risk
assessment;

				02 Students, staff from the two ministries (MINADER and MINEPDED) have completed the online Post Graduate Diploma course on Pesticide Risk Management.at the University of Cape Town;	
3C)Information exchanged by compliance and enforcement institutions	No formal mechanism for exchange of Information(e.g. notifications of new registrations)  No publicly available list of pesticides	Information exchange system and procedures agreed by all relevant stakeholders.	Information being exchanged as agreed.	An assessment and needs for information exchange on pesticide registration and post registration control has been completed, as recommendation an information exchange system be put in place for the exchange of all types of information related to pesticide use.  2 websites have been created and under development, by the department of regulation and quality control of agricultural products and inputs, Ministry of Agriculture and Rural Development.  •www.drcq-minader.org  •www.intranet.drcq-minader.org  The type of information being exchanged: laws and	S

Outcome 4:  IPM alternatives to conventional pesticides successfully promoted and the use of chemical pesticides, POPs and highly hazardous pesticides reduced	4a) Number of registrations of cotton and cereal pesticides, highly hazardous pesticides and bio pesticides	27 herbicide +7 fungicide +44 insecticide formulations registered for cotton; 28 of 44 insecticides in Classes I & II  3 formulations of Alluninium phosphate & 1 of cyfluthrine for cereal storage  4 biopesticides registered		50% reduction in highly hazardous pesticides (HHP) registrations from Baseline 5 biopesticides registered (+25%)	decrees, decisions, etc. related to pesticide management in Cameroon, i.e. Registration, Inspection and control procedures as well as pesticide application equipment and other agricultural inputs; In addition:  2 WhatsApp Groups;  • Phytosanitary surveillance platform; and  • Bio – Surveillance platform;  A study on existing potential alternative methods to conventional chemical pesticides used in plant protection has been completed, and a status report produced  Priority HHPs identified for which replacement is required and some potential alternatives to these HHPs identified (some botanicals and use of IPM) Field test protocols developed for selected botanicals for pest control in banana field and for maize in storage.	S
--	---	---	--	--	--	---

				Two aromatic plants (Hyptis spicigera and Ocimum canum) tested and proven effective for the control of maize weevils(Sitophyus zeamays), as alternative to two HHPs, namely,: PHOSTOXIN (Alluminium phosphide) and Diclorvos;  Two efficacy trials completed for four botanicals (Chromoleana odorata, Asystasia gangentica, Titonia	
				diversifolia and Azadiracta indica) alternatives to HHP, proven effective for the control of banana pests (nematodes and banana weevil). HHPs identified were Rugby 10G; MOCAP 10G,Nemacur 15 GR, etc)	
4b) Number of alternatives adopted by network farmers	3 improved cotton varieties; spatial distribution of pests, efficacy of neem (Coordination National des Cultures Annuelles; IRAD)	Extent and types of alternatives used and needs analysis established;	% increase in the number of alternatives compared to the baseline. On-field effectiveness of alternatives trials with farmers.	A workshop to strengthen capacity of banana producers' alternative methods including use of (Chromoleana odorata leaves (powder) and kitchen ash, for the management of banana pests for 40 farmers (12 women and 24 men).  A Demonstration workshop organized for 30 farmers (24 men, 6 women). on the production and formulation of some tested botanicals	MS

	crop to as alte (IRAD PNVR/	A). atives to ulfan		(Hyptis spicigera and Ocimum canum) with proven insecticide effectiveness for the control of maize weevils; Technical guide developed on the production, formulation and use of the powder of two aromatic plants for the protection of maize weevils in storage.  Technical guide developed for the preparation of (Chromoleana odorata leaves(powder) for treatment of banana suckers against banana pests(nematodes and weevils);	
qua chei HHF proj	emical and typology survey collect collect monstration	ished by use ogy y/data	30% decrease in use of chemicals		N/A Indicator not achievable and was cancelled.

Outcome 5: Project monitored and evaluated effectively.	5a) Implementation of M&E activities as planned including timely preparation and submission of semi-annual and annual progress reports.	0	M&E activities completed as planned.	M&E activities completed as planned.	08 six-month Project Progress Reports produced  Five Project Implementation review reports  14 project coordination meetings;  A 3rd no cost extension has been granted for an additional 1 year with effect from Feb 2021 to Feb 2022;	S
	5b) Mid-term and Final Evaluations reports available.	0	Mid-term evaluation report	Final evaluation report	An Independent mid-term evaluation of the project was conducted from 01 to 10 March 2018;	S

# Action plan to address MS, MU, U and HU ratings

Outcome	Action(s) to be taken	By whom?	By when?
Outcome 1: Existing POPs and obsolete pesticide stocks disposed of in an environmentally sound manner and POPs pesticide contaminated sites remediated.	Launching of tender, selection of offers, award of contract for the safeguarding and disposal of additional 50.8 tons of obsolete pesticides including Methyl Bromide and associated wastes;	Project Management Team, FAO (Procurement service).	February 2022
Outcome 3: Regulatory framework and institutional capacity strengthened for sound management of pesticides throughout their lifecycle	Validation of the draft revised law and text of application of the 2003 phytosanitary law in Cameroon as requested by the Government to the GEF project, to integrate some relevant sections on pesticides management;	FAO,MINADER, MINEPDED	September 2021
Outcome 4: IPM alternatives to conventional pesticides successfully promoted and the use of chemical pesticides, POPs and highly hazardous pesticides reduced	Organize two trainings for national extension workers, farmers on the use of alternatives tested and proven effective for banana pests and maize in storage.	Consultants;  Project Management Team, Partners (University of Ngaoundere, CARBAP), Consultants;	August 2021

# 3. Progress in Generating Project Outputs (Implementation Progress, IP)

(Please indicate progress achieved during this FY as planned in the Annual Work Plan)

Outputs <sup>12</sup>	Expected	Achievements at each PIR <sup>14</sup>						Implement.	Comments Describe any variance <sup>15</sup> or any
Outputs	completion date <sup>13</sup>	1 <sup>st</sup> PIR	2 <sup>nd</sup> PIR	3 <sup>rd</sup> PIR	4 <sup>th</sup> PIR	5 <sup>th</sup> PIR	6 <sup>th</sup> PIR	status (cumulative)	challenge in delivering outputs
Output 1.1 Strategy for disposal of up to 100 metric tons of obsolete pesticides and associated wastes developed.	Q1Y6	international consultant to conduct 2 trainings: on inventory of pesticides and on Pesticide stock management system (PSMS) as well as data entry into the system.  Letter of Agreement (LoA) with MINADER to conduct inventory of pesciete	were conducted by the international consultant: 15 staff trained in techniques of inventory of pesticides, 8- 12 August 2016, followed by the conduct of inventory in 9 regions of Cameroon; 9 staff trained in the use of	been signed between FAO and an international NGO, Green Cross Switzerland, to conduct an Environmenta I Assessment (EA) and prepare an Environmenta I management plan (EMP) in view of safeguarding and disposal of another 30.9 tons of	tons of obsolete pesticides was identified in 2019, bringing the total quantity to 47.6 tons to be safeguarded and disposed of.  An Environmenta I Assessment (EA) conducted and an Environmenta	FAO PSMS data and other inventory data on the Zone Industrielle Magazin Magzi / Arista site in Douala to include risk assessment information on Methyl Bromide.  A Site Specific Assessment conducted and a Management Plan developed for the Zone			In 2018, Methyl Bromide stock was identified by the government. This stock was considered as priority stock to be disposed of as was agreed during the 4 <sup>th</sup> PSC. Meeting. This requires an update of the Environmental Management Plan (EMP), the review of the tender drafted in 2019 to include the safeguarding and disposal of Methyl Bromide (MB). The EMP was reviewed to include the risk assessment information on
		pesticides.	stock management system	identified during the	Management Plan (EMP) finalized in	Industrielle Magazin Magzi / Arista site in Douala, in order to			Methyl Bromide.

# 4. Information on Progress, Outcomes and Challenges on Project Implementation

#### Please briefly summarize main progress achieving the outcomes (cumulative) and outputs (during this fiscal year):

#### C1:

- An Environmental Management Plan (EMP) completed including risks assessment of 10 tons of Methyl Bromide site;
- Tender developed for the Safeguarding of total 50.8 tons of obsolete pesticides and associated wastes, reviewed including Methyl bromide (10t); Tender split into two groups of waste: pesticides and methyl bromide.

#### C2:

- Two (02) Schemes designed for empty pesticides containers management, and implemented in pilot sites (North (Garoua) and Littoral (Loum));
- Implementation of the two schemes completed and a total of 2.6 tons of empty pesticide containers collected and stored for disposal/recyling;
- Before and during implementation of the two pilot projects, awareness raising and training was conducted. Twenty-five training sessions were organized at various sites in the localities of Garoua and Loum. 791 producers (186 women and 605 men) were trained in the management of empty pesticide packaging, with an emphasis on triple rinsing of containers immediately after use.
- A multi-stakeholder workshop organized from 18-19 November 2020 to endorse the national empty pesticides container management strategy.
- National strategy for container management finalized for Cameroon;

#### C3:

- Monitoring of post training inspections and post registration controls; As updates, total number of inspectors is 138 (118 inspectors trained, appointed and sworn in as of 2018 and 20 new inspectors designated in 2019).
- The average number of inspections carried out at the borders and on the territory between 2018 and 2020 under the current inspection system is between 25 000 to 30,000 inspections per year.
- 2 websites have been created and under development, by the department of regulation and quality control of agricultural products and inputs, Ministry of Agriculture and Rural Development. (i) www.drcq-minader.org, (i) www.intranet.drcq-minader.org
- Regarding information exchange 2 WhatsApp groups: i) Phytosanitary surveillance; Platform bringing together 186 participants and ii)
   Bio-surveillance of pests: Platform bringing together 80 participants which aims to popularize integrated pest management of major pests in Cameroon.
- Quantities of pesticides imported per year (tons): 2015=14 000T; 2016=13 800; 2017=19 700T; 2018=13400T.

- The National Laboratory during the 2018-2020 period, analyzed respectively: Pesticides: 2018 (133); 2019 (142) Fertilizers: 2018 (112); 2019 (75), It analyzes around thirty active ingredients in pesticide formulations, 23 parameters in fertilizers, 22 parameters in agricultural products.
- Revision of the 2003 phytosanitary law and its related texts (03) of application on pesticide registration and inspections, plant quarantine
  and national phytosanitary council. Drafts available pending stakeholder endorsement;
- 3rd Ordinary Session of the National Phytosanitary Council was organized by the MINADER on November 2020 with the objective of
  assessing the status of implementation of the recommendations of the first two ordinary sessions of the CNP organized earlier on with
  the assistance of the FAO;

.

C4

- Number of potential alternatives to HHPs identified: (1) Banana weevils and nematodes 34 alternatives; (2) maize storage pests 29 alternatives; (3)Tomato nematodes and insect pests 44 alternatives; and Cotton pests 4 alternatives;
- Two field testing conducted on alternatives (*Chromoleana odorata*) proven effective for pest control of banana weevil and nematodes, and maize weevils with two research institutions (CARBAP and University of Ngaoundere respectively);
- A workshop conducted to strengthen IPM capacity of banana producers' alternative methods for the management of banana pests for 40 farmers (12 women and 24 men).
- A demonstrative training conducted on the production and formulation of botanicals with proven insecticide effectiveness for banana and maize pests.
- Publication of two(02) technical Guides on "the production, formulation and use of the powder of two aromatic plants (*Hyptis spicigera* and *Ocimum canum*) for the protection of maize weevils in storage weevil" and "*Chromoleana odorata* proven effective for the control of banana pests"

C5

- Organization of 4 Project Steering Committee so far;
- A 3<sup>rd</sup> no-cost extension has been granted to the project for an additional one year (28 February 2021 to 28 February 2022).
- A communication strategy developed; two posters produced for empty pesticide containers have been used for C2 and draft radio spots have been delivered. A factsheet is under development.

What are the major challenges the project has experienced during this reporting period?

What are the major challenges the project has experienced during this reporting period? Max 200 words:

The COVID 19 pandemic is an additional setback factor to be resolved within the framework of the implementation of certain project activities such as the recruitment of international consultants, the organization of workshops and other training to bring together more than 50 people, missions field monitoring and many others. The implementation of these activities is now dictated by the economic climate of COVID 19 Pandemic, which thus imposes modifications in the initial programming and extended deadlines.

The timeframe of the project has been affected as we could not carry out certain activities. This resulted in an additional year of extension of the project.

#### Development Objective (DO) Ratings, Implementation Progress (IP) Ratings and Overall Assessment

Please note that the overall DO and IP ratings should be substantiated by evidence and progress reported in the Section 2 and Section 3 of the PIR. For DO, the ratings and comments should reflect the overall progress of project results.

	FY2021  Development  Objective rating <sup>16</sup>	FY2021 Implementation Progress rating <sup>17</sup>	Comments/reasons <sup>18</sup> justifying the ratings for FY2021 and any changes (positive or negative) in the ratings since the previous reporting period
Project Manager / Coordinator	S	S	Despite the delays in the implementation of some activities due to COVID 19, the project has been able to achieve some outputs. Progress towards achieving expected results is being made. With another no-cost extension granted to the project, it would be possible to dispose of the remaining obsolete pesticides stocks as a lot of effort is being made to speed up the tender procurement process.
Budget Holder	S	S	There is good progress towards achieving results
GEF Operational Focal Point	S	S	Significant progress has been achieved in activity implementation. Positive results have also been recorded and it is expected that with the remaining time for project implementation more obsolete pesticides stocks shall be eliminated. In spite of the impact of the Covid19 pandemic, the project is determined to forge ahead with the help of the barrier measures put in place by the Government of Cameroon.

<sup>&</sup>lt;sup>16</sup> **Development/Global Environment Objectives Rating** – Assess how well the project is meeting its development objective/s or the global environment objective/s it set out to meet. For more information on ratings, definitions please refer to Annex 1.

<sup>&</sup>lt;sup>17</sup> **Implementation Progress Rating** – Assess the progress of project implementation. For more information on ratings definitions please refer to Annex 1.

 $<sup>^{18}</sup>$  Please ensure that the ratings are based on evidence

Lead Technical Officer <sup>19</sup>	s	S	The project has advanced satisfactorily and in its final year of implementation. Disposal activities are nearing completion with the contracting of the waste management company. The project surpassed its targets regarding the capacity building. Stakeholders are fully engaged regarding all components of the project. Regarding the use of HHPs, the project has identified HHPs and field tests have been carried out on alternatives and promotion on the use as well as awareness raising activities are ongoing.  While the project is expected to achieve its objectives, the current situation with the COVID-19 pandemic caused delays in implementation. The project is extended until end of February 2022 to ensure project activities are completed and outcomes are achieved.
FAO-GEF Funding Liaison Officer	s	S	Despite some teething issues in the beginning, the project gained momentum and was able to build important collaboration among all partners and with farming communities. With the strong capacity-building element on lifecycle management of pesticides and pest management, it is highly likely that the results of this project will be sustained.

<sup>&</sup>lt;sup>19</sup> The LTO will consult the HQ technical officer and all other supporting technical Units.

# 5. Environmental and Social Safeguards (ESS)

#### **Under the responsibility of the LTO (PMU to draft)**

This section of the PIR describes the progress made towards complying with the approved ESM plan, when appropriate. Note that only projects with <u>moderate</u> or <u>high</u> Environmental and Social Risk, approved from June 2015 should have submitted an ESM plan/table at CEO endorsement. This does not apply to <u>low</u> risk projects. Please add recommendations to improve the implementation of the ESM plan, when needed.

Social & Environmental Risk Impacts identified at CEO Endorsement	Expected mitigation measures	Actions taken during this FY	Remaining measures to be taken	Responsibility

ESS 8: Gender Equality	Consistent with the International Labour Organization's (ILO)  Training in safety, monitoring and handling procedures will be provided to all national monitoring staff. Personal Protection Equipment (PPE) provided for all personnel involved in safeguarding.  Potential adverse impacts to Workers, further assessments are undertaken, and plans are developed, implemented and monitored to manage the risks and potential adverse impacts in such a way that is consistent with this Minimum Standard and respects and protects the fundamental rights of workers,	Provision of preventive and protective measures, including modification, substitution, or elimination of hazardous conditions or substances;	
ESS 6. Genuer Equancy			
ESS 9: Indigenous Peoples and Cultural Heritage			
	N/A		
New ESS risks that have emerged during this FY			

In case the project did not include an ESM Plan at CEO endorsement stage, please indicate if the initial Environmental and Social Risk classification is still valid; if not, what is the new classification and explain.

Overall Project Risk classification (at project submission)	Please indicate if the Environmental and Social Risk classification is still valid <sup>20</sup> .  If not, what is the new classification and explain.
Medium	The project is designed to have positive benefits to the environment through the removal of obsolete pesticides and risk reduction of contaminated sites together with the reduction in use of hazardous pesticides and the routine environmentally sound management of empty pesticide containers. However, in achieving these objectives, there is potential for environmental impairment particularly in the event of an accident in the removal and elimination of the obsolete pesticides. Mitigation measures are considered during the implementation of activities and have also been proposed in the EMP prepared for the safeguarding and disposal of pesticides and remediation of contaminated sites still to be conducted.

Please report if any grievance was received as per FAO and GEF ESS policies. If yes, please indicate how it is being/has been addressed.

Not applicable

#### 6. Risks

#### **Risk ratings**

#### **RISK TABLE**

The following table summarizes risks identified in the **Project Document** and reflects also **any new risks** identified in the course of project implementation. Please make sure that the table also includes the Environmental and Social Management Risks captured by the Environmental and social Management Risk Mitigations plans. The <u>Notes</u> column should be used to provide additional details concerning manifestation of the risk in your specific project, **as relevant**.

<sup>&</sup>lt;sup>20</sup> **Important:** please note that if the Environmental and Social Risk classification is changing, the ESM Unit should be contacted and an updated Social and Environmental Management Plan addressing new risks should be prepared.

	Risk	Risk rating <sup>21</sup>	Mitigation Actions	Progress on mitigation actions <sup>22</sup>	Notes from the Project Task Force
1	Institutional arrangements pose challenges related to execution of the project	L-M	The project was prepared in a participatory manner by the relevant ministerial departments. However, Cameroon has some history of difficulty in interministerial collaboration. The project execution activities have therefore been carefully allocated between MINEPDED and MINADER and a fully functioning and active PSC will be necessary to guide the project.	Coordination meetings taking place regularly, facilitating consultations with the government/partners with the follow up by the project steering committee.	
2	Monitoring staff being exposed to pesticides during collection and repacking of empty containers	М	Training in safety, monitoring and handling procedures will be provided to all national monitoring staff. Personal Protection Equipment (PPE) provided for all personnel involved in safeguarding.	The use of PPEs recommended and provision was made for that during collection and repacking of empty pesticide containers; The activity has ended without any incident reported.  Training is envisaged for staff on protective measures to take during safeguarding and repacking of obsolete stocks and associated waste.	

<sup>&</sup>lt;sup>21</sup> GEF Risk ratings: Low, Moderate, Substantial or High

<sup>&</sup>lt;sup>22</sup> If a risk mitigation plan had been presented as part of the Environmental and Social management Plan or in previous PIR please report here on progress or results of its implementation. For moderate and high risk projects, please Include a description of the ESMP monitoring activities undertaken in the relevant period".

3	Insufficient funds for safeguarding of major contaminated sites, the disposal of POPs and other project activities	L	The PPG has carefully reviewed all obsolete stock and contaminated sites data, and revised the inventory estimates. The project will respond to any changes to the existing inventory to ensure that: priority sites are repackaged; pesticides disposed of; and Contaminated sites remediated.	35.7 tons of obsoletes pesticides exported and destroyed, to respond to a government request to dispose of the first 45t as soon as possible About 50 tons new stock Inventoried including Methyl Bromide to be safeguarded and disposed of. However, this risk is especially relevant, as the disposal will be done in two contracts (while the ProDoc only foresaw one contract). After the first disposal in 2018. The remaining budget is insufficient.  A decision was taken during the 4 <sup>th</sup> PSC meeting held in November 2019 that the funds originally allocated for remediation of contaminated be reallocated to safeguarding and disposal of obsolete pesticides as priority as it included	
				contaminated be reallocated to safeguarding and disposal of obsolete pesticides as	
				financing of 23 million	

	Risk	Risk rating <sup>21</sup>	Mitigation Actions	Progress on mitigation actions <sup>22</sup>	Notes from the Project Task Force
				FCFA for the disposal activity.	
4	Potential for political instability	M	At start of project there was no apparent sign of political unrest. Still, the risk needed to be monitored continuously by the lead ministries throughout implementation and reported to the FAO and the Project Steering Committee (PSC) in case it becomes significant. Monitoring continues;	There is currently sociopolitical unrest in the South West region of the country where one of the project sites (Muyuka) was identified for empty pesticides container management pilot, making it impossible to carry out this activity.  In view of the above, a new pilot site for the container management has been identified in the Littoral region in the locality of Loum in the littoral region, an area in thesame agro-ecological zone and the same agricultural activities, to replace Muyuka in the South West. This decision was taken during the 3 <sup>rd</sup> PSC of 14 September 2019; The activity on empty pesticide container management has been completed successfully without any incident.	

	Risk	Risk rating <sup>21</sup>	Mitigation Actions	Progress on mitigation actions <sup>22</sup>	Notes from the Project Task Force
5	Environmental contamination from leakage of POPs and other obsolete pesticides due to poor conditions of containers.	М	Management measures to be included in the EMP include field procedures to ensure no further leakage occurs during the project activities. Chemical stores will be ranked according to leakage risk at the beginning of the project, and will be safe-guarded as a matter of priority.	Inventory data provides information on environmental risk on the different sites and stores and type of wastes, for necessary precaution to be taken during safeguarding.  The EMP that has been developed for the safeguarding and disposal of obsolete stocks include management measures as well.	
6	Insufficient national ownership of revised pesticide legislative framework.	L	National stakeholders were consulted during the PPG and other preparatory activities. Continued sensitization will be conducted during project execution including national training sessions with key staff.	There have been regular consultations with partners including consultative workshops to agree on way forward. The government to put in place a working group of stakeholders to participate in the revision of the existing law under the guidance of a national and international consultant;  The follow up of the implementation of this activity discussed during the 4th PSC meeting in November 2019.	The project is actively engaging with institutional needs and requests (for example it has received a formal letter to help draft the phytosanitary law, or the request to add methyl bromide) as well as following up for the National Phytosanitary Council, Laboratory operational plan and information exchange.

	Risk	Risk rating <sup>21</sup>	Mitigation Actions	Progress on mitigation actions <sup>22</sup>	Notes from the Project Task Force
7	Insufficient national capacity in undertaking evaluation and decontamination of pesticide contaminated sites	М	Capable institution(s) will be contracted to carry out Decontamination operations working together with a National team in order to impart expertise on in situ soil remediation.	The international NGO Pure Earth has provided training & support in Rapid Environmental assessment (REA). National capacity has proven really good as some trained staff have assisted in the field for site investigations. Pure earth also conducted detailed investigations on the contaminated sited and proposed options for remediation of these contaminated sites.	
8	Climate risks such as floods, crop calendars disruption or increase of pest invasions	L	Emergency sites will be primarily safeguarded during the driest months with a view to reducing risks associated with torrential rainfall. Contingency plans, especially targeting removal of excess water accumulated in the holding areas, as well as an assessment of flood risk, will be included in the EMP and implemented in the event of torrential rains.	Environmental management plans have been prepared in view of safeguarding and also towards remediation of pesticides contaminated sites. The EMPs provide adequate information on the appropriate measures to take and time the activities could be conducted at a low risk.	

9	Low existing use and uptake of alternative technologies by producers.	L	A large-scale information and awareness-raising campaign about the modes of application and effectiveness of the proposed alternatives will be undertaken to help promote uptake of alternatives. The promotion of IPM through FFS has been quite successful in previous related initiatives and, together with assistance from local NGOs, will be employed as part of this project to raise awareness on alternatives.	Farmers are associated in the testing of some botanicals the field. Problem identification has been conducted with farmers to raise awareness on the fact that alternatives exists, thus preparing the farmers for the use of alternatives. Farmers have participated in field trainings in the use of alternative measures for the control of banana weevils and nematodes and the control of weevils of maize in stock using botanicals. This is part of activities to raise awareness on the fact that alternatives exists, thus preparing the farmers for the use of alternatives to highly hazardous conventional pesticides;
				workshops are planned for about 50 farmers and extension workers to promote the use of alternatives to conventional pesticides. Technical guides have been produced for this purpose.

	Risk	Risk rating <sup>21</sup>	Mitigation Actions	Progress on mitigation actions <sup>22</sup>	Notes from the Project Task Force
10	Poisonings among the agents involved in the collection and re-grouping of unrinsed empty pesticide containers.	L-M	Training modules revolving on technologies for the safe collection and re-grouping of these wastes will be specifically designed for the pilot project agents, and all agents trained prior to the piloting of collection activities.	The sensitization of the population on the dangers of using empty pesticides containers in the pilot sites, has just been completed by two NGOs, using tools such as posters, radio slots, etc.  Training of farmer's organizations, pesticide farmers and extension agents was done at the beginning of the collection activities of the pilots. Training modules included triple rinsing of containers and technologies for the safe collection of the wastes.	

	Risk	Risk rating <sup>21</sup>	Mitigation Actions	Progress on mitigation actions <sup>22</sup>	Notes from the Project Task Force
111	Pesticide companies/ distributors and farmers do not support the project.	М	The project has involved and will continue to involve the private sector and producers associations in all the processes related to the project implementation.	Through FAO partnerships (letters of Agreement), two cooperatives have just been given the opportunity to lead the pilots for the collection of empty pesticides containers; The activities have just been completed successfully; Pesticide companies will participate in the workshop to endorse the national strategy for empty pesticide container management.	
12	Customs noncompliance in the implementation of the pesticides control system at entry points.	L	Awareness-raising/ Obtaining the formal commitment of the Ministry of Finance (Customs). Customs' involvement into the development of the new control system.	The Customs officers participated in the training organized for inspectors on pesticides inspection and for information exchange on pesticides	

# **Project overall risk rating** (Low, Moderate, Substantial or High):

FY2020	FY2021	Comments/reason for the rating for FY2021 and any changes (positive or negative) in the rating since the previous
rating	rating	reporting period
Low	Low	Overall risk rating is low, as factors affecting implementation are being addressed by the project team and partners
		(within the control of the project). However, COVID 19 is adding a further risk layer to the completion especially of
		output 1.2 within the current expected timeframe.

# 7. Adjustments to Project Strategy – Only for projects that had the Mid-term review (or supervision mission)

If the project had a MTR review or a supervision mission, please report on how the MTR recommendations were implemented as indicated in the Management Response or in the supervision mission report.

MTR or supervision mission recommendations	Measures implemented
Recommendation 1:  To the PMU and FAO Cameroon The PMU should urgently develop an implementation strategy for the remaining activities to ensure their implementation over time, taking into account the project closure date.	FAO procedures were explained to key stakeholders/actors during coordination meetings, especially to COOP-HOC and CARBAP, AFAIRD and CREPD, CNPCC and University of Ngaoundere who were involved in the implementation of LOAs, to avoid further delays in implementation.  Through LOAs: CNPCC (in Garoua-North), and Farmer organization "COOP HOC" + local council (in Loum-Littoral) were involved in the management of empty pesticides through pilot collection schemes (Component 2: Management of empty pesticides containers, output 2.2: implementation of pilot project on management of empty pesticides containers); A total of about 2.7 tons of empty pesticide containers were collected. Based on lessons learnt from the collection schemes pilots, a national strategy for the management of empty pesticide containers was developed by the project which was endorsed by stakeholders  Under component 4: Promotion of alternatives to conventional pesticides, Output 4.2: Alternatives to conventional pesticides were tested for their technical and economic feasibility through LoAs with 2 institutions: 1) CARBAP (Banana research institution), for the field test of alternatives to highly hazardous pesticides, on banana pests (banana weevils and nematodes) and good results obtained, and 2) University of Ngaoundere tested some alternatives (plant extracts) for the control of maize weevils good results also obtained.  A no cost extension been granted for up to February 2022 to enable the project to complete planned outputs.  A Technical Assistant was recruited in June 2019 who has been supporting the Project Technical Coordinator in project implementation.

#### Recommendation 2:

#### To the PMU

The PMU should hold regular weekly or at least monthly meetings to enable members to monitor the proper implementation of the project and contribute effectively to accelerating the implementation of activities.

The PMU will hold monthly meetings to evaluate progress, share information and identify potential risks, problems or issues affecting the implementation of activities. Recommendations issued from these meetings will be followed up to ensure implementation by the concerned.

The PMU made an effort to hold regular face-to-face coordination meetings and more and more, we limited ourselves to emails, telephone exchanges with the restrictions imposed as part of the response to Covid 19.

#### **Recommendation 3**

To FAO Cameroon: The project should design and rapidly implement a computerized monitoring and evaluation system to facilitate instant monitoring of the activities implementation.

With the assistance of the Monitoring and evaluation officer at the FAO Cameroon, a computerized monitoring and evaluation system was put in place. The log frame has been reviewed and all the information introduced into FPMIS to replace the old log frame. It is now possible to monitor instantly to know which activities have been implemented at any given time.

FAO tracking system has been put in place, with a possibility of reporting progress monthly (Tracking linked to log frame and work plan);

Four missions were made to monitor activities on the management of empty pesticide container which were ongoing in the field conducted by a joint team of partners (FAO/MINADER/MINSANTE/MINEPDED).

The Lead Technical Officer provided support for the monitoring of the activities of the project; FAO's FPMIS system allows monitoring of project activities at any time and in addition a monitoring table has also been developed for monitoring project activities at given intervals (Month, quarter, year)

#### **Recommendation 4:**

To the PMU: The PMU should develop a strategic note on the sustainability of the project's actions and its exit strategy.

The recommendation is well noted;

In relation to the management of empty pesticide containers, a meeting is envisaged with the to define the management strategy for the sustainable management of empty packaging of pesticides; A national strategy on the management of empty containers was developed based on lessons learnt from the pilot collection schemes put in place in the North and Littoral regions; The strategy was endorsed by multi-stakeholders including pesticide importers, distributor, users, municipalities and waste recyclers;

A list of project achievements is available and regularly updated to serve as a basis for drafting a strategy note. Recommendation 5-Even though gender equality was not taken into account at formulating the results and key indicators of the project outputs, to the PMU: The project must effort is being made to ensure women are more involved in the give greater consideration to activities that are ongoing and to come. Activities on sensitization gender by involving enough on dangers of using empty pesticide containers in a recent women in the implementation of workshop on 27/28 November 2018 involved a good number of the project. women. For promotion of alternatives to conventional pesticides (Highly Hazardous pesticides); and management of empty pesticides collection scheme a number of women have been trained/sensitized on the production and use of proven alternatives for the control of banana pests and pests of maize in stock. We include women as much as possible in the activities, but this recommendation remains difficult to implement as the gender aspect was not taken into account in the drafting of the Project. Through two NGOs working in close collaboration with the **Recommendation 6**to the PMU and FAO Cameroon: farmers, pesticide retailers, and users, 2 communication The project must improve its strategies have been developed for the sensitization of the visibility and develop a farmers/population in the North and Littoral where the pilot communication strategy to phase for empty pesticide container management schemes were showcase the value of the work implemented. Communication tools have been prepared undertaken. (posters, flyers, and spot messages). A National communications consultant was recruited for the project and a communications strategy was developed with priority outputs, in partnership with the implementing ministries. The development of this strategy has been supported by the Lead Technical Officer; The strategy is being implemented. The tools produced are indicated in section 10 of this report.

#### Adjustments to the project strategy.

Pleases note that changes to outputs, baselines, indicators or targets cannot be made without official approval from PSC and PTF members, including the FLO. These changes will follow the recommendations of the MTR or the supervision mission.

Change Made to	Yes/No	Describe the Change and Reason for Change
Project outputs	Yes.	In relation to pesticides contaminated sites, there are no technically sound facilities available in the country (such as landfills, etc.) to dispose of all pesticides contaminated soils in an environmentally sound manner. Pure Earth NGO that conducted the assessment (through an LOA) recommended the remediation strategy option of excavation of contaminated soil and exportation for destruction. It turns out that the estimated quantity of soil to be exported for destruction was too much given the available budget. Solution still being sought with the government. In addition, arrangements are being made by the government to secure and mark up the identified site, taking into account the level of contamination of the said site, which is problematic, and government is looking forward to mobilize other funding for remediation.  The PSC suggested a reallocation of the budget to the safeguarding and disposal of Methyl Bromide considered higher priority for disposal as it presents a higher risk to environment and health

#### **Adjustments to Project Time Frame**

If the duration of the project, the project work schedule, or the timing of any key events such as project start up, mid-term review, final evaluation or closing date, have been adjusted since project approval, please explain the changes and the reasons for these changes. The Budget Holder may decide, in consultation with the PTF, to request the adjustment of the EOD-NTE in FPMIS to the actual start of operations providing a sound justification.

Change	Describe the Change and Reason for Change					
	Original NTE: 28 February 2019	Revised NTE: 28 February 2022				
Project extension						
	Justification:					
	First no cost extension: The 3rd Project Steering Committee was held on the 14					
	September 2018, during which the level of implementation of the project					
	activities was examined' resulting in 579	% activities implemented and 47% of the				

budget executed. To this effect, a no-cost extension of the project was recommended during the Mid-Term Evaluation to enable the project to complete its activities. A one year extension granted, from 28 February 2019 to 28 February 2020.

A second no cost extension was granted to the project for another one year for the period February 2020 to 28 February 2021. The 4th Project Steering Committee held on the 29 November 2019 evaluated the implementation of the project activities to be 75.20% and 63.72% of the budget executed. A number of activities started were still ongoing. Such as:

- The launching of the tender and selection of a contractor for safeguarding and disposal of obsolete pesticides;
- Implementation of pilot schemes for empty pesticides container management;
- Field testing of alternatives and contribute to promotion.

This decision to extend the project timeline was supported by a request from the government through the Ministry of Environment, for a no cost extension.

A third no cost extension granted to the project for another 1 year for the period February 2021 to February 2022. The following activities could not be completed

 The launching of the tender and selection of a contractor for safeguarding and disposal of obsolete pesticides;

The tender has been prepared and published in UN procurement system, however due to COVID 19 implications; many companies have withdrawn their applications. In the end of bid, FAO received only one bid. During evaluation processes, the company did not pass minimum safety requirements for obtaining the tender. Since COVID 19 pandemic, there are many travel restrictions, verification missions were not possible for the company, which resulted in poor estimation of the situation.

In addition to above, the price for disposal and safeguarding operations has been increased due to additional safety measures on the personnel and transportation.

FAO is proposing to re-tender by splitting one tender into two groups: pesticides and methyl bromide. The tender should remain one but quotation from the

companies would need to come for two groups of waste. That will allow for better facilitate negotiation on the price and right treatment of the waste.

The estimated timeframe for completing this operation (re-tender, signature of the contract and safeguarding/disposal), is from February 2021 to January 2022.

Based on the justification prepared by the FAO (LTU/NTC), the decision to extend the project timeline was supported by a request from the government through the Ministry of Environment, for a no cost extension.

# 8. Stakeholders Engagement

Please report on progress, challenges, and outcomes on stakeholder engagement (based on the description of the Stakeholder engagement plan included at CEO Endorsement/Approval (when applicable)

List of stakeholders	Engagement mechanism
FAO	Responsible for project oversight, monitor and provide technical support to the project, and financial management of the project since inception of project in July 2015 till date; As PSC member has participated in decision making.
MINEPDED (Ministry of environment, protection of nature and sustainable development)	Lead executing partner, for components 1 and 2 of the project.  Government agency., member of project management team and project steering committee.  Participation in decision making.
MINADER (Ministry of Agriculture and Rural Development)	Lead executing partner for components 3 and 4 of the project, member of project management team and project steering committee; Through an LOA with the FAO has conducted an inventory of obsolete pesticides in 2016 and has supported the project to organize trainings on pesticides inventory, on PSMS and data entry and training on pesticides registration tool kit
AFAIRD (The association of honest African women for research and development)	Member of the PSC. Collaborating with the project to ensuring awareness raising on empty pesticides container management and promotion of alternatives to HHPs
CREPD (The research and education centre for development)	Member of the PSC. Collaborating with the project to sensitize on empty pesticide container management with respect to national; and international legislation and promote alternatives to hazardous pesticides and also
CROPLIFE INTERNATIONAL	Member of PSC. CLI has undertaken extensive work in safeguarding the obsolete stocks in Cameroon (45 tons) at Edea store, as well as closely monitoring of the store in collaboration with CropLife Cameroon since <b>2012 up to April 2018</b> when the stock was exported to France and destroyed.
CROPLIFE Cameroon	Information and consultation Involved in Knowledge sharing and capacity building activities.

UNIVERSITY OF NGAOUNDERE	As member of the PSC. Contribute in decision making. Consultation (Testing of botanicals on pests of maize in storage, started <b>June 2019</b> ;
IRAD (The institute for agricultural research and Development	Support the design , and evaluation of alternatives to Highly hazardous pesticides in component 4 Participated at project inception, <b>July 2015</b>
MINSANTE (Ministry of Public Health)	Participate in decision making as member of the Project steering committee and Project management team(since inception of project July 2015
CNPCC (Association of cotton farmers)	Consultation (Through LoA management of empty pesticide containers, pilot scheme), Starting July 2019
COOP-HOC (Organization of farmers	Consultation (Through LoA management of empty pesticide containers, pilot scheme) <b>July 2019</b>
CARBAP(Centre for Banana research)	Consultation (Testing of botanicals for pest control in Banana( Starting June 2019

#### 9. Gender Mainstreaming

Information on Progress on gender-responsive measures as documented at CEO Endorsement/Approval in the gender action plan or equivalent (when applicable)

No gender analysis was undertaken at project formulation. No provision in the project for a gender mainstreaming strategy as such but it was envisaged that the project through collaboration with local NGOs would ensure that women's needs and roles are addressed by the project. There are no gender differences in relation to the participation of men and women in activities covered by the project, women and men are given equal opportunity but women participation is low.

The communication/sensitization strategy include a component on container management, particularly targeting women who are often the ones using containers for food and water storage to encourage participation in the container collection scheme, informing rural populations about the dangers and risks to human health and environment, associated with pesticide use and the use of empty pesticide containers. During awareness raising activities, 676 producers/pesticide users (188 women and 488 men) participated in sensitization meetings prior to implementation of the pilot projects the empty pesticide container in Loum and Garoua localities pilot. During implementation of the two pilot projects, twenty-five training sessions were organized at various sites in the localities of Garoua and Loum. 791 producers (186 women and 605 men) were trained in the management of pesticides in general and that of their empty packaging in particular, with an emphasis on triple rinsing of containers immediately after use.

Women were also targeted in the promotion of potential alternatives to very dangerous pesticides during field tests. A workshop to strengthen capacity of banana producers on alternative methods for the management of banana pests for 40 farmers (12 women and 28 men). Demonstration workshop organized for 30 maize farmers (6 women, 24 men) on the production and formulation of some tested botanicals with proven insecticide effectiveness for the control of maize weevils.

Participation of women is still very low. Overall, effort is made to involve women in all the activities, participation in trainings, at all levels including decision-making. Women are present in the project management team, the NGO responsible for awareness raising is coordinated by a woman.

#### 10. Knowledge Management Activities

# Knowledge activities / products (when applicable), as outlined in knowledge management approved at CEO Endorsement / Approval

So far safe disposal of 35,711 tons of obsolete pesticides and associated wastes have been destroyed. Assessment of priority contaminated sites revealed two highly contaminated sites to be remediated, thus reducing the releases of hazardous products into the environment. Training of national staff in Rapid Environmental Assessment. For continuity.

Awareness raising of the population and several training sessions organized for farmers at empty pesticides containers management pilot sites on good practices when using pesticides (the triple rinsing of containers immediately after use). The re-using of such containers for foodstuff and water will obviously reduce with the knowledge gained. As part of the awareness-raising campaign, two thousand posters one illustrating the triple rinsing and the other dangers linked to the use of empty pesticide containers for domestic purposes. These posters were distributed to the population and posted some at the two pilot sites where the empty pesticide containers collection schemes were being tested in Loum and Garoua localities.

The National Phytosanitary Council became functional through the assistance of the project. Capacity strengthened through training of pesticide registrars, pesticides inspectors and two staff completing training on pesticides risks management at postgraduate level. Contributing to better management of pesticides to prevent future accumulation of obsolete stocks and release of HHPs into the environment.

Under the promotion of alternatives to conventional pesticides (HHPs), sensitization workshops were organized to strengthen capacity of maize and banana producers on the preparation and use of proven alternative methods for the management of banana pests for farmers. These farmers were associated in the field efficacy testing of the alternatives (botanicals) on banana pests and maize storage pests.

## **11.Indigenous Peoples Involvement**

Are Indigenous Peoples involved in the project? How? Please briefly explain.

If applies, please describe the process and current status of on-going/completed, legitimate consultations to obtain Free, Prior and Informed Consent (FPIC) with the indigenous communities

#### Do indigenous peoples have an active participation in the project activities? How?

Indigenous peoples are participating in the project as part of the implementation of the empty pesticide packaging management project in Garoua. Indeed, traditional chiefs and some local peasant leaders were consulted and others involved in the collection activities of the empty pesticide containers. They serve as intermediaries and play the role of facilitators with the indigenous populations during field activities (training, awareness-raising and collection of empty pesticide containers). So, in these indigenous communities, it is imperative to have the approval of the chief if we want good cooperation with the rest of the population, in line with FPIC guidelines.

#### 12. Innovative Approaches

Please provide a brief description of an innovative<sup>23</sup> approach in the project / program, describe the type (e.g. technological, financial, institutional, policy, business model) and explain why it Stands out as an innovation.

Within the framework of the implementation of the activities of this project, we mainly identified two innovative approaches respectively in components 2 and 4.

- 1. With regard to component 2 relating to the management of empty Pesticide packaging, we have integrated the concept of triple rinsing of empty pesticide packaging immediately after use into the daily practices of producers, to facilitate the treatment process and thus limit the risks of contamination of farmers and environmental pollution. Such pesticide waste management system represents a pilot for policy innovation in Cameroon.
- 2. With regard to component 4 relating to the development of non-chemical alternatives, powder of two aromatic plants for protection of maize during storage against weevils have been tested. Based on the practical results obtained, a guide to the production, formulation and use of these alternatives to conventional pesticides is under development for promotion involving technical and social innovation potential.

Page 80 of 83

<sup>&</sup>lt;sup>23</sup> Innovation is defined as doing something new or different in a specific context that adds value

# 13. Possible impact of the Covid-19 pandemic on the project

Please indicate any implication of the Covid-19 pandemic on the activities and progress of the project. Highlight the adaptative measures taken to continue with the project implementation.

- Are the outcomes/outputs still achievable within the project period? No, an extension of an additional year was granted to the project to finalize the activity of collecting, safeguarding and disposal of obsolete pesticide stocks.
- Will the timing of the project MTR or TE be affected/delayed?
- It will be delayed for 6 months from the time of extension;
- What is the impact of COVID-19 on project beneficiaries, personnel, etc:
  - Teleworking by personnel faced with challenges of internet connectivity;
  - limitations on the number of participants for training sessions and other face-to-face workshops;
  - monitoring of field activities by telephone or other communication platform;
  - increase in the cost of activities due to the inclusion of kits and other anti-covid 19 devices;
  - extension of project timeframe;
  - Suspension of recruitment of international consultants and work done by national consultants;
- Are there good practices and lessons learned to be shared?

Teleworking has proven itself an important aspect of ensuring work continuity and personne	l not
exposed to Covid 19 infection;	

# 14. Co-Financing Table

Sources of Co- financing <sup>24</sup>	Name of Co- financer	Type of Co- financing	Amount Confirmed at CEO endorsement / approval	Actual Amount Materialized at 30 June 2021	Actual Amount  Materialized at Midterm  or closure (confirmed by  the review/evaluation  team)	Expected total disbursement by the end of the project
GEF Agency	FAO	In-kind	170,000	170,000		170,000
National Government	MINEPDED	In-kind	480,000	545,636		545,636

		TOTAL	9, 307,374	8,362,666		10,432,010

<sup>&</sup>lt;sup>24</sup>Actual Amount Materialized at Midterm or closure (confirmed by the review/evaluation team : The Midterm Evaluation report did not confirm the co-financing even though the project team had provided the information.

Please explain any significant changes in project co-financing since Project Document signature, or differences between the anticipated and actual rates of disbursement

## Annex 1. – GEF Performance Ratings Definitions

Development/Global Environment Objectives Rating — Assess how well the project is meeting its development objective/s or the global environment objective/s it set out to meet. DO Ratings definitions: Highly Satisfactory (HS - Project is expected to achieve or exceed all its major global environmental objectives, and yield substantial global environmental benefits, without major shortcomings. The project can be presented as "good practice"); Satisfactory (S - Project is expected to achieve most of its major global environmental objectives, and yield satisfactory global environmental benefits, with only minor shortcomings); Moderately Satisfactory (MS - Project is expected to achieve most of its major relevant objectives but with either significant shortcomings or modest overall relevance. Project is expected not to achieve some of its major global environmental objectives or yield some of the expected global environment benefits); Moderately Unsatisfactory (MU - Project is expected to achieve of its major global environmental objectives with major shortcomings or is expected to achieve only some of its major global environmental objectives or to yield any satisfactory global environmental benefits); Highly Unsatisfactory (HU - The project has failed to achieve, and is not expected to achieve, any of its major global environment objectives with no worthwhile benefits.)

Implementation Progress Rating — Assess the progress of project implementation. IP Ratings definitions: Highly Satisfactory (HS): Implementation of all components is in substantial compliance with the original/formally revised implementation plan for the project. The project can be resented as "good practice". Satisfactory (S): Implementation of most components is in substantial compliance with the original/formally revised plan except for only a few that are subject to remedial action. Moderately Satisfactory (MS): Implementation of some components is in substantial compliance with the original/formally revised plan with some components requiring remedial action. Moderately Unsatisfactory (MU): Implementation of some components is not in substantial compliance with the original/formally revised plan. Highly Unsatisfactory (HU): Implementation of none of the components is in substantial compliance with the original/formally revised plan.
