

FOLUR PROJECT

GRIEVANCE REDRESS MECHANISM

About the project

The FOLUR project aims to promote biodiversity conservation and sustainable food systems for enhanced livelihood opportunities in NW Liberia Landscape through land use planning, restoration of degraded lands, and strengthening governance, policies, and market incentives for nationally replicable models of deforestation-free cocoa and palm oil value chains.

About the grievance redress mechanism

Since the project has multiple partners and stakeholders with different initiatives and interests in NW Liberia landscape, grievances are bound to occur, thus, Accountability and Grievance Mechanism has been established to allow for the expression of and response to complaints raised by project affected persons related to the design and implementation of the FOLUR project. The accountability and grievance mechanism will address the concerns of the FOLUR project affected communities, identify the root causes of the grievance and/or conflicts, and find options for the resolution of such grievances, hence, fostering good cooperation with project stakeholders and ensure effective delivery of FOLUR project.

How to report

Grievances, inquiries, and clarifications can be reported in any language, e.g., English or any local dialect in Liberia.

Please send inquiries, complaints, or clarification regarding the FOLUR project in a confidential and anonymous manner through any of the following channels:
