

Trinidad and Tobago: Trinidad and Tobago Protected Areas and Wildlife Management Project. (World Bank)

Operational Program: 2,3 (Biodiversity)
GEF Secretariat Review: Work Program Inclusion

Financing (millions): \$4.20 Total (millions): \$16.80

Summary

The project objective is to safeguard the globally significant biodiversity in Trinidad and Tobago's critical Ecosystems theough conservation and sustainable management. These ecosystems are being thretened by a number of factors, mainly anthropogenic ones. Therefore, the project intends to address these issues by: (i) the effective management of critical ecosystems; (ii) supporting the involvement of local communities in the conservation of biodiversity; (iii) promoting the sustainable use of resources through the participatory development and implementation of strategies and action plans. Specifically the project will:

- Strengthen the key institutions with responsibility for protected areas management;
- Create a system of protected areas with a decentralized management system;
- Establish a framework for community development and participation in the management of the proposed protected areas, and for the sustainable use of natural resources in the surrounding areas, including conservation of biodiversity.

Expected Project Outputs: The project will have three main outputs

- 1. Key institutions with responsibility for protected areas management will be strengthenes.
- 2. A system of protected areas with a decentralised management system will be established.
- 3. A framework for community development and participation in the management of the protected areas and for the sustainable use of natural resources in the surrounding areas will be established.

resources in the surrounding areas will be established

Project Duration (months): 5

1. Country Ownership

Country Eligibility

Trinidad and Tobago ratified the CBD in August 1996.

Evidence of Country Ownership/Country-Drivenness

The team of consultants employed by MALMR to prepare management plans for the three proposed terrestrial national parks were supervised by an interagency task force and the project proposal was prepared with full participation from the relevant government departments, including THA and other stakeholders.

2. Program and Policy Conformity

Portfolio Balance

The project addresses a recognized gap and priority in the GEF portfolio for conservation in small island states.

Program Conformity

The proposed project design is fully consistent with the provisions of the Convention on Biodiversity, with the GEF Operational Strategy and specifically with objectives of the Operational Program # 2 on Coastal Marine and Fresh Water Ecosystems.

Replicability

The approaches adopted by the project of community based and decentralized natural resources management are pioneering approaches in resource management which can be replicated if sucessful.

Potential Global Environmental Benefits of Project

The projects global objective is to safeguard the globally significant biodiversity in Trinidad and Tobago's critical ecosystems through conservation and sustainable management. Trinidad and Tobago's biodiversity and ecosystems are unique because of the range of habitats supported, the rich endowment of species, and the regional and global significance of its wetlands.

Sustainability

The project would contribute importantly to ensuring environmental sustainability by preserving the country's bodiversity of national and global importance and improvement of the productivity of resource based activities, thereby enhancing the sustainable social and economic development of Trinidad and Tobago while protecting globally important resources.

Baseline Course of Action

Globally significant biodiversity in Trinidad and Tobago is concentrated in coastal and marine areas. In the absence of GEF assistance Government's main efforts would be concentrated over the next several years on terrestrial parks financed through IBRD. Government, through its national budget and with some assistance from international donors has neen undertaking a number of activities toward conservation and management of Nariva and Speyside and is expected to continue to do so. However, these efforts would be insufficuent in providing the level of protection required to safeguard globally significant biodiversity in these areas.

Alternative Action Supported by project

The GEF alternative would expand the baseline scenario (strengthening national capacity for protected areas management; establishment of three terrestrial national parks; and community development in the surrounding areas) by implementing an effective biodiversity conservation strategy for protection of key coastal and marine ecosystems as a complement to the baseline activities.

Date last Updated: 1/21/00 8:04:04 PM Page 3 of 5

Conformity with GEF Public Involvement Policy

Community support for the protected areas will be a key factor in the ability to effectively and efficiently manage the proposed raeas. The project will therefore pursue a collaborative and interactive approach which will include community concerns in management planning and startegies; will identify monitor and respond to impacts the protected areas may have on local resource users; and will respond through limited grant funding, to immediate community needs.

Private Sector Involvement

The private sector will be involved primarilly in tourism.

3. Appropriateness of GEF Financing

Incremental Cost

The difference between the cost of the baseline scenario and the cost of the GEF alternative is estimated at US\$ 4.2 million. This represents the incremental costs of achieving global environmental benefits through management and establishment of two marine/coastal protected areas, that would lead to conservation of globally significant biodiversity.

Appropriateness of Financial Modality Proposed

Financial Sustainability of the GEF-Funded Activity

Financial sustainability is a critical concern and would depend upon a combination of 1) government sunvention; 2) user fee revenues from visitors and concessionaires; 3) rvenues gained fron on-site sources -donations and sale of items; 4) mobilization private sector financing and 5) continued funding from environment trust fund financing which has already been established by government.

Absorptive Capability

The project is of a sufficient scale to be managed by the Trinidad and Tobago.

Cost Effectiveness

The cost of inaction in this regard which would result from biodiversity loss would far exceed the investment being sought by the project.

4. Coordination with Other Institutions

Collaboration

Close institutional coordination would be essential for the successful implementation of the project at several levels. The MALMR in carrying out its functions would require the cooperation of sevral agencies, in particular, EMA, TIDCO, and the Ministry of Tourism as well as the University of West Indies.

Complementarity with Ongoing Activities

The project is consistent with several activities being undertaken by the government throughits collaboration with inernational institutions and the lessons lerned from those activities are being incorporated in this project.

5. Responsiveness to Comments and Evaluations

Date last Updated: 1/21/00 8:04:04 PM Page 4 of 5

Core Commitments

The GoRTT sinaled its commitment to the project by preparing the legislation in advance for the establishment of the national Parks and Wildlife Authority whose function now are to be undertaken by a unit to be established in MALMR. MALMR has fully supported the preparation team, and moreover, allocated US\$ 0.31 mi in its 1999 budget to complete project preparation and begin start up activities.

Linkages

See interagency collaboration.

Consultation and Coordination

The project has been developed over a three year period and has enlisted the collaboration of major stakeholders.

Consistency w/previous upstream consultations, project preparation work, and processing conditions

The project is consistent with all the consultations held during its preparation

Monitoring & evaluation: Minumum GEF Standards, ME plan, proposed indicators, lessons from PIRs and Project Lessons Study

These are well developed in the project. The lessons from the PIR of the GEF evaluation and monitoring unit have been appropriately incorporated i the project pp 15.

Indicators

Tese are well developed in the matrix of annex 1.

Implementing Agencies' Comments

None received.

STAP Review

Stap review has been attached and raises issues which should be taken into account during appraisal especially with regard to stakeholder involvement.

Council members' Comments

Not yet.

Technical Assurances

Convention Secretariat

Not yet.

Other Technical Comments

Further Processing

The project is recommended for inclusion into the work program.
