#### A. PROJECT PREPARATION TIMEFRAME

Start date of PPG	05/01/2013
Completion date of PPG	04/30/2014

### **B.** PROPOSED PROJECT PREPARATION ACTIVITIES (\$)

Describe the PPG activities and justifications:

The proposed project aims to address impediments to the dissemination of PV power and create conditions for the autonomous long-term development of PV in the Egyptian market. Specifically, the proposed project intends to achieve these aims through the following: supporting the establishment of a regulatory framework that allows the installation of PV systems; coordinating with the national electricity regulator and the power distribution companies to allow the connection of PV systems to the grid and the sale of power from these systems to the grid; establishing a purchase price (tariff) for PV power that encourages private investors to invest in renewable energy systems; and establishing a technical knowledge base and supply chain that help to reduce the cost of PV.

As part of the activities to finalise the required documentation for final CEO endorsement, the PPG activities will focus on each of the project components, as well as on important inter-linkages between the different components. The regulatory environment in Egypt has been changing rapidly, a trend that is expected to continue (and even accelerate) with the recent arrival of a new government. Care will be taken to 'future proof' the project design - that is, to ensure that it is consistent with (and, indeed, contributes to strengthening) the anticipated regulatory framework of the future.

Specific project preparation activities will focus on: conducting a more detailed assessment of the market (retail, production, O&M), cost and revenue profiles and GHG reduction potential of small decentralized PV systems in Egypt; mapping and coordinating stakeholders, and mobilising particular sectoral constituencies (e.g. in the financial community); feasibility assessments of potential sites for roll-out of PV units; and laying the groundwork for sustainable financing mechanisms for PV uptake.

Eleven months is considered to be an appropriate project preparation period given Egypt's current circumstances. Egyptians will be voting for a new parliament and a new constitution in late 2012/early 2013, which will inevitably lead to a slow-down in Government and, indeed, among donors and the private sector as donors and firms adopt a 'wait and see' attitude before agreeing to participate in initiatives such as the GEF project. Civil disturbance is not anticipated on a large scale but cannot be wholly discounted; such disturbance would further impact Government performance and distract policy-makers. It is in UNDP's and the Government's interest if project preparation can be compressed and all efforts will be made to do so.

Nonetheless, given the unique Egyptian context, the 11-month PPG timeline is appropriate, presented on the understanding that we will endeavour to deliver the CEO Endorsement Request more quickly if circumstances allow.
