# **PROJECT PREPARATION GRANT (PPG)** PROJECT TYPE: Full-sized Project TYPE OF TRUST FUND: LDCF

Submission date: 05/18/2012

GEF PROJECT ID: 4994 GEF AGENCY PROJECT ID: 5092 COUNTRY(IES): Malawi PROJECT TITLE: Strengthening Climate Information And Early Warning Systems In Eastern And Southern Africa For Climate Resilient Development And Adaptation To Climate Change – Malawi GEF AGENCY(IES): UNDP, (select), (select) GEF FOCAL AREA(s): Climate Change

#### A. PROJECT PREPARATION TIMEFRAME

Start date of PPG	07/15/2012
Completion date of PPG	07/15/2013

## **B.** PROPOSED PROJECT PREPARATION ACTIVITIES (\$)

Describe the PPG activities and justifications:

The final product of the proposed PPG phase will be a UNDP-GEF compliant, full-sized project document for submission to the LDCF. The formulation will be guided by UNDP's toolkit for designing climate change adaptation initiatives (2010). The document will cover the following in detail:

• A detailed review of existing climate risk information and analysis at the district level, including current and projected changes in climatic parameters, exposure and vulnerability to floods, fire, droughts and windstorms. Existing risk and vulnerability assessments and hazard/zonation maps will be identified to assist in selecting locations and sectors which will benefit from the LDCF financed infrastructure and services;

• Review, analysis and summary of current and past project activities by government, donors, NGOs and private sector institutions that are related to EWS (including an updated report on co-operation and co-financing arrangements);

• Review and summary of existing Early Warning Systems, with particular emphasis on current climate-related impacts and threats. Identify current technologies, manufacturers and capabilities of existing trained personnel. Consultations with executing agencies to determine the most pressing needs in terms of observational equipment and infrastructure, training and capacity building to implement improved forecasting, tailored climate hazard products and their packaging into sectoral specific warnings/actions;

• Description and gap analysis of the current EWS implemented by the government and how it serves the information requirements of end-users. This will include a thorough evaluation of the information flow between government departments, systems used for information management related to vulnerability and climate risks, databases on past climate etc. This analysis should include a needs assessment for data sharing and communication protocols between different databases and departments;

Assessments of potential locations for automatic weather stations, hydrological gauging stations,

severe weather radars and upper air stations based on historical records of hydro-meteorological hazards, projected changes in climate parameters, availability of land for installing equipment, and expected socioeconomic impacts. This analysis should entail a detailed costing of combinations of weather/hydrological stations, radars, satellite imagery (including hardware and telemetry/communication costs), as well as estimates of running costs for equipment and personnel. An estimate of the potential human and material losses that will be minimised through the LDCF investment should be made for different equipment configurations, within the requirements of stakeholders and executing agencies;

Identify private sector clients who will be interested/willing to pay for EWS services, what they would expect of such a service (delivery formats, lead times etc) and how much they would be willing to pay etc. This information will be used to further suggest which types of equipment and locations may offer potential paid-for services;

• Specification of planned activities to be financed by the LDCF and their rationale (i.e. why and how are they will reduce vulnerabilities to climate hazards beyond what is already being done);

• Description of the geographic breakdown of EWS warnings in terms of districts and communities;

• Clear articulation of the outcomes and outputs, in the context of ongoing and planned baseline initiatives, as well as details of other ongoing adaptation projects (where applicable) with relevant and related key results;

• Definition of a Strategic Results Framework and a Monitoring and Evaluation (M&E) system with quantifiable and verifiable impact indicators at the outcome level. These indicators will be based on guidance by the LDCF results framework as well as the AMAT tracking tool for adaptation projects, but contextualised given the country-specific project outcomes. The indicators will be connected to a monitoring and evaluation plan, which will set out how and by whom these indicators will be measured and how verification data will be collected by the project;

• Definition of implementation and execution arrangements for the project with detailed roles and responsibilities of government entities (implementing partners), other partnering NGO/public/private sector entities including other national/international organisations (responsible partners) and a timeline for project implementation;

• Definition of a stakeholder involvement plan for the implementation phase of the project;

• Definition of project management and reporting arrangements;

• Securing relevant endorsement letters from the government and letters confirming co-financing commitments;

• A detailed set of Annexes including reports of PPG activities including all relevant stakeholder consultations.
