1. Technical design of investment needs associated to a mitigation strategy centred on forestry activities.	The study will aim to provide a technically-sound basis to project design/document determining a comprehensive mitigation strategy and investments in the forestry sector that focus on afforestation and energy production from biomass.	40 800	31 200	72 000

¹ Project ID number will be assigned by GEFSEC. If PIF has already been submitted, please use the same ID number as PIF.

2. Identification and assessment of a cost-effective risk management plan.	The objective of this consultancy is to identify a cost-effective package of measures that would reduce the long-term risk of loss and/or depreciation of the carbon stock contained in the forest asset. The study will gather data, carry out risk analysis and modeling to identify a balance mix of ex ante and ex post risk management measures, including community-based forest management, forest insurance, fire management systems.	14 400	9 600	24 000
3. Assessment of capacity building and awareness needs for climate change monitoring and measurement at both institutional and local level.	This study will lead to the identification of a set of targeted capacity building activities focused on carbon measurement and data collection. The analysis will be based on a review of existing best practices and experiences on monitoring, verification and reporting and will identify the most suitable to the context of Sudan.	6 000	6 000	12 000
