### B. PROJECT FRAMEWORK

**Project Objectives:** The proposed objective of the project is to enhance the resilience of water resources in the face of climate change by generating knowledge and promoting technologies to enable governments to integrate climate change considerations into policy, planning and on-the-ground investments in vulnerable sectors. The project will also generate regionally-valuable knowledge, promote its exchange and south-south learning.

Project Component	Grant Type	Expected Outcomes	Expected Outputs	Trust Fund	Indicative Grant Amount (\$)	Indicative Cofinancing (\$)
C1. Generation and exchange of knowledge, technology transfer and institutional strengthening	TA	- Knowledge base on scientific and technical information about climate change impacts on the water cycle for selected basins strengthened.  - Relevant policies and plans on sectors related to water (agriculture, water supply, ecosystem management, others) are strengthened to include climate change adaptation concerns.	- Generation of new data and scientific information on impacts of climate change on the water cycle for selected basins as measured by the number of publications on scientific media.	SCCF	800,000	1,000,000
C2. Mainstreaming of climate change considerations into policies, strategies and programs	TA			SCCF	750,000	1,000,000
C3. Design and implementation of adaptation measures in priority sectors	Inv	- Strengthened capacity for integrated management of water resources, and increased capacity to improve efficiency on the use of water resources.	- At least one policy per country has been reviewed, and number of improvement suggestions submitted to relevant bodies for consideration.	SCCF GEFTF	6,000,000 1,178,000	15,170,000 2,500,000
C4. Monitoring and Evaluation	TA			SCCF	483,790	500,000

<sup>1</sup> Project ID number will be assigned by GEFSEC.

		<p>- Relevant, innovative adaptation technologies and measures demonstrated/disseminated in the context of investments in vulnerable sectors.</p> <p>- High-Andean ecosystem and biodiversity management in selected production landscapes in Ecuador is more resilient and sustainable through the mainstreaming of anticipated water-sector climate change impacts into policy, planning and selected on the ground interventions</p>	<p>- At least one integrated water management plans, with climate change considerations, adopted or strengthened per country, with selected investments on relevant sectors successfully realized.</p> <p>- Pilot investments, with demonstration capacity, are carried out in the four participating countries.</p> <p>- In Ecuador, characterization of gaps, expertise needs, and opportunities to achieve a better and more sustainable management of Andean ecosystems of Global significance, with the inclusion of anthropogenic and climate change impacts in the implementation of biodiversity management plans</p> <p>- In Ecuador, local land use planning and policies that govern biodiversity management incorporate climate change impacts considerations on their formulation.</p>
